Hesiod goes on to tell how, to punish men, Zeus made Hephaestus make fire, and he set it on a woman (590 ff.) we have a tirade upon the sins of woman; but the Theogony gives no hint of any definite fall brought about by the creation of woman. In the Works he is somewhat more explicit. He first tells how

"Zeus in his anger hid the bread of life, for that Prometheus of crooked counsels had deceived him. Wherewith he caused sorrow for men, and hid fire. But the good son of Iapetos stole it again for men from Zeus the Counselor in a hollow fennel-stalk, what time the Hunter of the Thunder knew not. To punish men, we are told, Zeus caused Hephaestus to fashion the first woman (Eve). Then Hesiod proceeds to say (590 F.): 'For of old the tribes of men lived on the earth apart from evil and grievous toil and more thoughteth than the fates of death to men. For in the day of evil men speedily was old. But the woman took of the good gift of the jar with her hands and made a scattering thereof and devised hateful sorrows for men. Only Hope was within in her unbreakable chamber under the lips of the jar and saw not forth. For ere she could, the woman put on the lid of the Jar, as Zeus the Lord of the Agnath, the Gatherer of the Clouds, desired. But ten thousand other evils wander among men. For the earth is full of evil, and the sea is full. By night and day and the diseases of their own motion, bringing evil unto mortal men, silently, since Zeus the Counselor took away their voice. So surely may none escape the will of Zeus.'"

Hesiod continues (590 F.): 'and he named this woman Pandora, for that all the dwellers in Olympus had bestowed on her a gift. It seems that the truth is rather that Pandora is only another name for Ge, Earth, as the giver of all things. Hesiod's account seems to imply that the contents of the jar were evils; later accounts vary between evils and goods. There is in any case some difficulty about the inclusion of Hope (Eris)."

A comparison with the Roman Prom. 'I made men cease to foresee their doom,' Cho. 'What cure didst thou find for this disease?' Prom. 'I planted in men blind hope (Er Disclaimer) suggests that Er disclaimer might itself be reckoned an evil. But the matter cannot be dismissed so. It should be noted that the epithet 'ero' ('eros'), ' unconscious, 'bears' have no other meaning than merely to indicate prodigious antithesis (Early Age of Greece). As, for instance, 'made other mean either 'made of gold, etc.,' or 'working with gold, etc.'
Hierodoloi (Graeco-Roman) - In classical antiquity this term designated certain temple ministers who were below the rank of priests, and usually, if not invariably, of servile status; but how far it was, or ought to be, applied to all temple slaves, and even to certain free persons who gave voluntary service to the gods, is a question which E. Curtius (Anc. Delph., Berlin, 1843, p. 18 f.) led the way in giving it a very wide application, inclusive even of slaves manumitted by dedication or sale to a god, and he has been generally followed (cf., e.g., Daremberg-Saglio, etc.). But the rarity of the occurrence of the term itself in Greek authors and inscriptions; the distinction sometimes implied in our authorities between hierodoloi and certain other ministers, e.g. temple-sweepers (rēveēes); and the peculiar nature of the cults in connexion with which the term does actually occur—these considerations suggest that hierodoloi were extraordinary class, not found in all temples or cults, and not to be confounded with the mass of sacred slaves.

The term itself has not been found in any author or inscription of earlier date than the Augustan period. Strabo uses it of ministers of the temple of Isis at the two Comas (353, 559), of Zeus at Venus in Morimine (357), and of Men Phases at Cabeira-Sebaste. These shrines are all Carpathian. It uses it also in connexion with two temples of Aphrodite—one at Eryx in Sicily (372), and the other at Corinth (378). It is not used by Lucian in connexion with the cult of the Syracusan goddess at Hierapolis; and its only other occur-

long to the blessed gods" (727 ff.). The nails of the hand should not be cut at a festival of the gods (742 ff.). Sexual uncleanness is recognized (753 ff.).

There is no space here to speak of the various precepts of traditional lore of a practical kind to be found in Hierolet; of the things which it is unlucky to do; of the days which are lucky or unlucky, either altogether or partly and for specific works (765-825).

The most striking thing about the Hieroletic teaching is that here, as, in the Hebrew 'Wisdom,' there is no question of a life after death. It is in this life that the just man finds his reward. It is in this life that the unjust meets his punishment. Good and bad alike, without distinction, go down to Hades—as far beneath the earth as the heavens are above the earth—and there is no distinction of fortune for the dead.

Death 'hath a heart of iron, and brazen and pitiless is the soul within his breast. Whomsoever men he once hath raised, he keepeth; and he is hate of the dead souls. In front stand the echoing balls of the god of the under world, of strong Hades and dread Parephose. And a dread dog keepeth watch before them; pitiless he is and hath an evil snarl. On them that enter he knoweth with his tail and snout both his ears; but to come forth again he allowed none, but keepeth watch and devoureth many a soul. And from the gates of strong Hades and dread Parephose (Theog. 788 ff.; cf. Crossan). There is a hint of the doctrine of atonement in

Hierodoloi (Graeco-Roman). In the Pandora myth, as seen J. E. Harrison, JHS xx. (1900) 99 ff.

The cardinal virtues in Hierolet are Industry and Justice.

"Work is no reproach, idleness is a reproach" (Words, 311).

"For parents that hunger may either theirs, and that Demeters may love them and the barn with livelihood" (390 ff.). The god Hermes deals with all this idleness, like the Thracian pirates whom, like the Thracian pirates whom, the travelers in the idleness of the man, do nothing but make the earth and the world works; clad in mist, facing everywhere over the earth. Also, there is the maiden Justice, the daughter of Zeus, glorious and worshipful among the gods who hold Olympos. And whenever one inflicts harm with crossed revolving, straightforwardly she stethes by Zeus the Pater, the son of Eros, and believes of the righteous-minded man, to make the people pay for the folly of their rulers, who with ill thoughts wrongs under judge, declaring falsely (344 ff.).

Injustice is punished in this world by all manner of disaster, more or less severe by land and by sea (242 ff.). On the other hand, those who do justice prosper:

"Peace be in bad land, the muse of children, and Zeus doth never decree war for them. Neither doth famine nor does concord with men who deal straight with them, but they do their work with gladness much livelihood, and on the hills the oak's top beareth for them, and the beast hide beest; because they are heavy with wool and their wives bear children like unto their parents; they flourish with fruit, and their ports are full of ships, but housetops earth beareth fruit for them" (288 ff.).

Hierodoloi is confident that justice is better in the end:

"How may neither I nor son of mine be just among men. The other way is better, thou, if the unjust shall have the greater happiness. Howbeit, this I do not that Zeus, the Hur of the Thunder, will bring to pass" (270 ff.).

Justice is the distinguishing mark between man and the lower animals:

"This law hath the son of Kronos appointed, that fishes and wild beasts and the fowls of the air should devour one another, since there is no justice among them. But to men he hath given justice, which is far the best" (275 ff.).

The sins of the fathers are visited on the children, but the children of the just are better in the after days (284 ff.; cf. Æsch. Ag. 788 ff.).

Some prohibitions enjoined by Hierodoloi are:

Thou shalt not commit adultery (323). Thou shalt not wrong the suppliant or the stranger (327). Thou shalt not wrong the orphan (330). Thou shalt not steal (333). Thou shalt be not false witness (709).

Among specifically religious precepts the duty of worshiping the gods is insisted on.1

According to thy power do sacrifice to the dead gods in holy wise and pure, and burn splendid thigh pieces; at other times provide them with libations and incense, both when thou goest to bed and when the sacred light comes, that they may have a magnificent drink and be directed toward thee, that thou mayest buy another's estate, not another thine" (386 ff.).

In particular, ceremonial purity is emphasized: libations are not to be made to the gods with unwashed hands (794 ff.; cf. Homer, H. vi. 356 ff.). Certain necessary functions are to be performed discreetly even by night; 'for the nights too be

1 J. E. Harrison, Thespie, 96, writes of Hierodoloi that 'when it is its duties, these duties are not to glorify Athens or to offer burnt sacrifices to Zeus, they are not prescribed or sacrifices in any form, but simply the observance of sanctuaries, attentions, positive and negative.' For this there is no mention of the supposed attendants of Hierodoloi.
HIERODOUloi (Semitic and Egyptian)

In literature seem to be where Plato employs it of Jewish ministrants (ili. p. 420)—probably a loose use of translation—and where Plutarch (Aem. 21) speaks rhetorically of the power of love over great men, who katharos hiero
doulous.

As for inscriptions, we have a stele from an unknown Cydonian Asklepios at Pselphis in Nubia, and another of a name (in the time of Marcus Aurelius) to Zeus Helios by one who describes himself as le
doulous patai lepsoi katoi. At Ostia a stele of Serapis dedicates to the lepsoi katoi; and at Sarepta in a text concerning the erection of public buildings, we hear of a stele of the seafarers in Sicily and Italy, the venerae of Erino and the Martyrodi of Larinum (CIG. 2327, 3202; CIG. Ital. and Sic. 3254, 914; CIG. 6000; Dittenberger, Syll. Leipzig, 1898, p. 293).

At each of the two Comas, according to Strabo, there were about 6000 hiero
doulous; at the southern they formed the major part of the population; at the northern they were the high priest for every kind of service, but might not be sold. In both cases they were of both sexes. At Venissa there were 3000, and these formed 20,000, according to Strabo. At Cebeira they were numerous, and tilled the sacred soil. At Eryx and Corinth only females are mentioned; and these were prostitutes, dedicated, we are told, by both men and women, to the service of the gods. At the first shrine they had been numerous, but in Strabo's time the prac
tice of dedicating them had largely declined; at the second there were about 1000, famous among seafaring men for their beauty and greed. It was to these women, doublets, that Pindar devoted the ode of which we have a beautiful fragment (87); but he did not call them lepsoi katoi.

At Eryx and Corinth, then, we see that the lepsoi katoi were nothing but female prostitutes, who gave all their earnings to the temple. At Comana Pont, Strabo (p. 559) evidently means us to understand that a part of the lepsoi katoi were included in the patai katoi lepsoi katoi of the ephoroi, who made the place 'a little Corinth.' But at Comana Capp., Venissa, and Cabeira we are not explicitly informed that the lepsoi katoi did anything but cultivate the temple lands. At the first shrine they were distinguished from a class of bearers of sacred images or emblems, the theophoroi, who took part in the theophania, mentioned also at Comana Pont, and who were supposed by Rennay (list of the episcopate) and bishops of Phrygia, i. (Oxford, 1895-97) 136 to have been voluntary servants of free condition. There is no doubt that the term hiero
doulous, in all the instances so far dis
cussed, means serfs, whose bodies were absolutely at the god's service and the priest's discretion, to be used either for purposes of labour or prosti
tution. They were inalienable, but probably could not acquire freedom; on the whole, they represent a class of slave whose condition was worse than was customary or generally approved in Hellenic, whatever its sacrosanct character. The term, however, more generally used in popular or official passage, especially in lepsoi katoi, but it would not be safe to say that he intends any precise distinction. Nor can we say whether the patai katoi were included in the lepsoi katoi, so concerning its use. The Syracusan inscription, however, seems clearly to distinguish lepsoi katoi from mere serfs; and the lepsoi katoi of the Roman text equally clearly seem to be priests of the temple and to indicate his office—lepsoi katoi katoi katoi.

If other temple ministrants are to be included popularly under the term, it should only be temporary ones, such as, e. g., the ephoroi of Zeus at Olympia (Strabo, p. 592), the doulai of Asclepius at Ephesi (Pausan. 8. 797), and such captives as the Phoenicians of Euphrates, or the remanens and uroth mentioned by Herodotus.

The term cannot have included free men and women who offered their services to the god for life or for a time, such as the Armenian ladies who prostituted themselves in the sanctuary of Apollo (Hom. Hymn. Apoll. Del. 137). Even such as a case as that of Ion in Euripides' drama was excluded; for, though a founding, he can say lepsoi to katoi thei athenai Eryx, i.e., his service was voluntary like that of all whom he calls Xeporoi katoi (Eur. Ion, 1284, 109). More clearly akin, perhaps, to the Eastern Assyro
do were certain cultivators of sacred lands in Sicily and Italy, the venerari of Eryx and the Martiales of Larinum (CIG. 2327, 50; 51, ii. 34, 141, pro Clemente, x. 45).

It is true that such a class as the lepsoi katoi was not likely to secure frequent mention in ancient author's inscriptions; but it is impossible not to attach weight to the fact that only in a very few localities do we actually hear of lepsoi katoi, and even in these not till a period at which Assyrian cults had become very widespread among Greek and Romans. We prefer, therefore, to regard them as a peculiar class of servile ministrants not identical with the normal temple slaves of Greece or Italy. Their con
dition and their service, in spite of the fact that it was usually to have been escheated on Greek soil; and we must infer that the nature of their servility, both as culti
vators and temple slaves, was such as to be more congenial to the West than to the East.1

If we are right, then there is no further question of the manumission of slaves by sale, real or fictitious, to a god being a preliminary to the state of lepsoi katoi, although it may very well have led to their becoming in many cases ordinary temple servants, or even lepsoi.2 That a slave could be dedicated to a temple service is clearly shown by a curious inscription of Lebadea,3 wherein a son, acting under his father's will, manumitted a slave by dedicating him to Zeus Basileus and Tro
dphonius, stating that his duty will be lepsoi katoi en tēn 

1 The text is given in the article.

HIERODOUloi (Semitic and Egyptian).—This term, which signifies simply 'sacred servants,' is employed by scholars to designate religious officials whose functions included sexual rites. Such officials can be traced in connexion with several shrines, and probably existed at others, as the evidence of an archaic hymn has survived. Those officials were of both sexes, though, as is natural, evidence for the existence of female HIERODOUloi is much more abundant than for male. 2 As Rennay, 7. 21, 174; Rennay represents the hiero
doulous, as the institution was modified by the development of western civilization in Asia Minor.

Babylonian.—Evidence for the existence of female herodoulou at Erech, in Babylonia, in
connexion with the worship of the goddess Ishtar, is found in the case of a female captive of the
epic contains the story of Eabani, a wild
man, who terrified a hunter whom Gilgamesh sent
against him. The hunter was directed to take
with him a woman, who was called "Herodoule,"
or consecrated to a deity; this woman, when they
approached Eabani, opened wide her garments,
exposing her charms, yielded herself to his
bonds, and for six days and seven nights gratified
his desires, until he was won from his wild life. 1
In the light of the evidence from other archives,
the presence of these women leaves little doubt
that this woman who was herodous was a sacred
prostitute belonging to the temple of Ishtar at
Erech.

From the code of Hammurabi, which was set up
in Easgali, the temple of Marduk at Babylon,
it appears that similar functionaries existed elswhere, and it was given by law that the code
The code was meant for Hammurabi's whole realm,
and accordingly implies that such women might
be connected with any temple of the land. Direct
proof of the wide-spread nature of the institution
is found in 182, where 'women of Marduk,' the
god of the city of Babylon, are granted greater
rights in the inheritance of the property of an
intestate father than other women of this class,
as well as in the business documents, which men-
tion the consecrated women of various gods.

The code of Hammurabi prescribed to such
women. They are called Nin-ah, 'woman of a
god'; Sal-siram, 'vowed woman,' or possibly
'servant-woman,' if Siram be taken from a different
root; Sal-sar-Lea, which is defined in the bilingu-
lar text as gudidus, 'holy one'; and Sal-
Nin-Be, which is defined as Sirmatait, 'seed-
purifying' or 'seed-forgetful' ones. It is probable
that she took a part in the worship of the peculiar
priesthood. The term most frequently
used in the code is Sal-siru. This class would
seem to have been the most numerous. These
women were hedged about with certain restric-
tions, but also had in some respects larger privi-
leges than women in common life. There were
some privileges which they ordinarily lived, though they were not compelled to live there.
If one did not reside in one of these special houses,
she was forbidden, on pain of death, to open a
window (§ 110). They were protected from
slander by the same law which guarded the good
name of married women (§ 127). A father could
leave to such a woman an inheritance by will. In
that case her brothers were to work her portion
of the estate and pay her the income. Should
she become dissatisfied with their management,
she might take the property from their hands, and
leave it to whomever she pleased. Her father's
will might give her the power of leaving her prop-
erty by testament after her death; if it did not,
his share, when she died, reverted to her brothers.
If she was accorded no portion by her father's will,
the she was to inherit equally with her brothers, if she
was a Sal-siru; if she had a gudidus or a Sirmatait, she
received one-third of a brother's share (§§ 173, 179,
180, 181, 182). That the two classes last mentioned
were temple prostitutes is sufficiently indicated by
their names, especially when the use of gudidus
and g'dhadha in Hebrew (cf. e.g. Dg 221) is com-
pared. That the Sal-siru were women of the same
character appears for them in a father's will that
they might have children, and that these children
stood in such a peculiarly orphaned condition that
they were apparently frequently adopted into regularly
connected families (§§ 187, 195 196). The women
of Marduk, for whom the code legislated espe-
cially, were apparently of the classes gudidus
and Sirmatait, for, like these, they received, when
no provision was made for a son, only one-third of a
son's portion. Their advantage over other women of their class was that they
could always dispose of their property at death as
they chose (§ 192). Probably it was one of these
'women of Marduk,' who, Herodotus (i. 181) tells
us, passed the night on the couch in the sanctuary
at the summit of the apex of the Temple of the
god. These votaries of Marduk appear in the
contract literature. 1 One of them, Lamassum,
married, and it was agreed that she should be
the property to her grand-daughter, stipulating that
the grand-daughter should support her as long as she lived. A
woman consecrated her two daughters to
Shamash, stipulating that they should support
her as long as she lived. 1 A gudidus and her sister
divided an inheritance. 1 One votary adopted a
child; 1 another brought suit for a share in an
estate; another, who was the child of a king,
was prominent in transactions in grain; 17 while no
fewer than three consecrated women appear in a
lawsuit in which one sued another and the third
appeared as a witness. 18 Votaries entered, accord-
ingly, into the active affairs of life, much as other
people did.

Lyon, 19 like John, 20 endeavours to support the improbable
view that these consecrated women were chaste. His
arguments are three in number: (1) one who slandered them
was punishable in the same way as one who tarnished the
name of a married woman; (2) one of them adopted a
child; therefore, when it is said that one of these women had a
child, probably it was adopted; (3) when one of these women married,
the possibility that she might present her husband with a child
is not expressed by the word aida, but by sarit or untait.
Lyon thinks that this was because votaries generally did not
marry till they were advanced in years, so that it could be
presumed that they would be barren.

With reference to these arguments the following points should

---

2. See, e.g. CT viii. 50, Bu. 89–5–12, 56;
3. and Thureau-Dangin, Lettres d'Alexandrie, p. 28.

8. Thureau-Dangin, op. cit. 157.
be noted. (1) The law against tarnishing the good name of a virgin by no more implies of necessity that she was a perpetual virgin than it implies that a married woman must be. We learn from Herodotus (I. 169) that certain rules had to be observed by every married woman, and one of these was regarded as innocent only if practiced under certain conditions. If such were the case, it is easy to see why the law should protect such a woman from the repugnance of being a common wife to married women. When the nature of the Sôd is that of the line of Hasmoneans in Israel, and the custom of Hasmonean women to be taken into account, together with the fact that unmarried virgins had children, one is compelled to interpret the law in the way suggested. (2) The idea that all the children of virgins were born in wedlock is more or less a matter of personal interpretation. It has no support in the text. (3) Lyon's explanation of the use of the words ωριά and υτέραi may possibly be right; but, even if it is, it does not follow that the consecrated women were virgins until married.

It is sometimes said (as by John) that these women were virgins who, when they married, still maintained their virginity. John supports this view by a reference to a text of the time of Hammurabi published in CT II 283, which, as he interprets it, states that a certain woman purged her daughter and then married her to another man, at the same time vowing her to perpetual virginity. In reality there is no reference to perpetual virginity in the text; it simply repeats the statement that the daughter was pure. What the process of purification was we can only conjecture. It is all to be connected with the purification of a maiden before her adoption, to which adoption has been thought to be connected with circumcision (see Onomastics (Semitic), iv, 3, 55). It clearly has no bearing on the marriage of female hircodoloi.

Two passages in the code refer to a class of men, called by the Sumerian name KER-ŠE-GA, whose children are classed with those of the Sal-limus. A reference in the Papyrus of the Hammurabi period 4 describes certain men as NER-ŠE-GA, or as the son of the god of Marduk. It is clear, therefore, that they were religious officials; and, since the code accords their children the same treatment accorded to children of female hircodoloi, it is probable that they were sodomy, though full proof of this is lacking.

Closely connected in principle with the service of these women was the temporary hircodoloi, which was the temporary pre-nuptial service in this capacity required of every Babylonian woman. According to Herodotus (I. 169), once in her life every Babylonian woman had to sit in the temple of the goddess of fertility until some stranger came and threw into her lap a piece of silver, uttering the formula: 'I beseech thee, great goddess, to accept this female child (the goddess who helps women in travail) to favour thee.' Thereupon the woman lay with the stranger outside the temple precinct. The money thus given was sacred. Having discharged this obligation to the goddess, the woman returned home to a normal life. No disgrace, but rather honour, attached to her for this act. Strabo (xvi, 1, 29) as well as the apocryphal Epistle of Jeremiah (v, 23), bears witness to this custom.

2. Syrian.—Among the Syrians of the upper Euphrates the Semitic mother-goddess was worshiped at Hierapolis-Bambyce under the name Attar, and this worship was closely akin to her cult elsewhere. Originally it is her worship to which the Syrian Father, Ephrem, alludes, when he says that, on the feast of their idol, women prostituted themselves, and virgins forthwith vowed their virginity to prostitution. These remarks would seem to point to the existence of both permanent and temporary hircodoloi at Bambyce.

At Hierapolis in Lebanon, the modern Baalbek,
insititute legislated against. Further testimony to the same effect is found in 2 K. 23:12, which appears that, in carrying out the reform, which he based on Deuteronomy, King Josiah found it necessary to destroy the houses of the sodomites (gîḏâkhesîm) in the very first act of Jahweh. It is clear from the context here that gîḏâkhesîm, though a masculine plural, refers to sacred prostitutes of both sexes, for the last clause of the verse describes these houses as 'where women were hanging for Asaherah.' It seems, accordingly, that down to the time of Josiah hierodoulai of both sexes had been attached to the temple, and that the prophetic teaching had not sufficiently awakened the public conscience to disapprove them.

Two explanations of the presence of these ministers in Israel have been offered. The Hebrew prophets believed that they were no part of the ritual of Jahweh, but that they were an importation from other Semitic religions. Modern scholars believe that the religion of Jahweh had its roots in the soil of primitive Semitic ritual, and that hierodoulai were one of the features which Jahweh’s religion, like other Semitic religions, inherited from the parent stock. Whatever the origin of the institution, it is certainly that, aided by the Deuteronomic law, the prophets imposed their view upon Judah, and finally prohibited this debasing type of religious service, banishing it from their land. How debasing it had become, and how this appeal was made to those same passions which men have more need to control than to inflame, the excavations at Gezer make it possible for us to realize as never before. Such art as they possessed was enough to extend the appeal by which those sacred courtesans in the service of deity enticed men to indulgence. That the prophets succeeded in removing from Judah’s religion an institution conceived in religious sanction and hoary with age, which appealed so powerfully to the animal element in man, is eloquent testimony to the fact that they were working with God and for Him.

6. Egyptian.—Among the Egyptians the institution of hierodoulai can be most clearly traced at Thebes. Strabo (xvii. 4. 8. 181) tells us that here ‘a very beautiful virgin of most distinguished lineage was consecrated to Zeus (Ammon), and that she played the consubine and had intercourse with whomsoever she desired until the purification of her body was accomplished (i.e. until the expiration of a month); then, after her purification, she was given to a husband.’ This point to the existence of an institution kindred to that which we have traced among the Semites. That this practice was not confined to one woman, but was one manifestation of a more general institution, is indicated by an inscription of Rameses III., in which he tells of the disposition of the booty taken in his Syrian war. In speaking of the captives he says: ‘I have carried them away: the males to fill thy storehouse; their women, to be subjects of thy temple.’

Breasted is undoubtedly right in thinking that these women became hierodoulai. This is confirmed by scenes pictured on the wall of the temple erected by Rameses III. at Medinet Habu, which one may see in order to appreciate. They are usually spoken of as ‘harem scenes,’ but their occurrence in a temple would seem to indicate that it was no ordinary harem. On the great festival days the women and other dancers danced before the god (or goddess) just as the women of the harem were accustomed to dance.
to do for the entertainment of their earthly lord, and it can hardly be that the dances were chaste.

At Thebes the wife of the high priest bore the title 'chief concubine,' while a queen or princess was called 'wife of the god.' This recalls the statement of Herodotus (i. 183), that a bed on which a wife of the god slept for his enjoyment was placed in the inner sanctum of the temple of Amon, as in the sanctuaries of the royalty of Egypt. That it might be claimed that this relationship on the part of the wife of the god to him was no mere fiction is shown by the account which the famous queen, Batahepet, of the XVIIIth dynasty, gave of her parentage. She claims that the god Amon came and actually had intercourse with her mother. When it was thought that a god could take a lady wife and a woman, too, who had earthly husbands—it is probable that, under religious regulation, provision was made for similar conduct on the part of his worshippers. Osorkon II., of the XXXIst dynasty, declares that he had assumed the protection of the sacred women of the house of Amon and the protection of all the women of the city, who have been maid-servants since the times of their fathers. The sacred women and princesses of the house of Amon are classed by him with the maid-servants throughout the city as having no natural protectors. They were probably of the class under consideration. The names of the hierodouloi in connexion with other Egyptian deities is not so clear. The god Min, of Coptos, is pictured with phallic emblems and it would seem probable that some such institution attached to his cult. Ramses III. says that he made decrees for the administration of the 'pure' settlement of women of the priestly class; but these were not used in a ceremonial sense; they were women consecrated to the god, whose functions were probably similar to the functions of the women of Amon. Perhaps it was a garbled report of the functions such consecrated women, among whom were princesses, that reached Herodotus, and led him to say (ii. 138) that Khnum (Khons), in order to obtain money for his pyramid, prostituted his own daughter. If there is any truth behind the story it is probable that the princess was a priestess of Pharaoh, and acted as a hierodoulos. Thus the Egypt of the Old Kingdom was not unsanctioned with the circle of ideas which we have traced at Thebes is shown by the fact that one of the Pyramid Texts describes the king as 'the man who takes women from their husbands whither he wills and when his heart desires.' In the Old Kingdom the king was a god, and his actions were divine. Probably other gods, through such practices as we have traced, were thought to do the same.

The goddesses Hathor and Bastet were mother-goddesses, and were pictured nude, as were the Semitic goddesses of the same type. Hathor was praised in a chorus of dancing women. That women became temporary hierodouloi at the festival of Bastet at Bubastis is implied by Herodotus (ii. 60), who says that men and women went in large numbers together in boats to this feast at Bubastis, playing and singing the whole way. At town they would disembark, sing, dance, and tambourine the women of the town, some of the visitors pulling up their clothes. In the light of the goddessesses the constant use of the services of these women is not difficult to divine.

A similar service seems to have attached to the worship of the god of Mendes, whom Herodotus identifies with the Greek god Dionysus. He tells us (ii. 48) that at his festival women carried about in procession images of the god with the member nodding, and that the town was noisily as large as the image. The women were singing the praises of the god. It seems clear that these women were playing the part of temporary hierodouloi, though they may have been initiated. They can be traced to that vocation. The institution seems to have been as widespread in Egypt as among the Semites, though its details cannot be so clearly traced.

The ideas which called into existence this institution, so revolting to modern feeling, can now be only conjectured. It seems most likely that it originated in a polyandrous society, and in that circle of ideas, traceable in many parts of the world, in which originated the custom of giving a bride the first night to a king or priest in order to secure the blessing of fertility. Priesthood and kingship in their later senses were unknown among the primitive Semitic and Hamitic tribes, and hence, probably, it was thought to secure the divine blessing by leaving the first and consecrating act to divine chance.

The temporary hierodouloi were a survival of this custom. The more permanent institution of the hierodouloi were a later development, and grew out of the conception that intercourse with a supernatural being produced fecundity and a remarkable offspring (cf. On 390 64°). The consecrated hierodouloi were the representatives of deity, to give concrete expression to this idea. Fertility was thought to come to men who could identify themselves with these sacred males, and virile power to men through commerce with the consecrated women.

LITERATUR.—A. Jordanus, Studier-N´Hrner, Leipzig, 1891, p. 68 f. — F. Weidemann, Die Staat, der religionsgesch. Archiv, Freiburg i. B., 1894, ii. 126, 307 f. — L. Badger, Die Staat, Archiv, 1, Tubingen, 1897, pp. 121, 305-311; G. A. Barton, Semitic Origins, New York, 1902, chs. ii., iii., vi.; S. R. Driver, Com. on Deuteronomy, Edinburgh, 1894, p. 329 f.; J. G. Frazer, Ardame, Athens, London, 1896, pp. 38-40; T. K. Cheyne, art. 'Bastet,' in E. G., ii. 1894, 2, W. P. F. Petrie, art. 'Bastet,' in E. G., iv. 1895, pp. 89-90; G. A. Barton, art. 'Bastet,' in E. G.; E. P. Rendel, Notes and Queries, i. Oxford, 1895, pp. 135, 147. On the mainland of Greece only two inscriptions have been found which mention iepoioi—the first four lines of a hymn in Messenia, which is headed Iepoi Iepoioi eu iepoi (Dittenberger, Syll.º, Leipzig, 1898, nos. 932), and another Messenian text discovered at Kalamata (CIG 1457). In the first text certainly, and the second probably, the word is simply equivalent to patera, and means 'initiated.' Whether that is its sense also in inscriptions of Teos and Delos (CIG 2320) is not certain. It is not otherwise used in Greek of initiated persons; its Messenian use may safely be put down as local and singular.

In Asia Minor the name certainly does not mean the initiated, but temple ministers. It seems clear that all iepoi did not come to be so in the same way, nor had they the same tenure and conditions of service. (1) At certain shrines free
persons either dedicated themselves or were dedicated by parents and guardians to the service of a deity; but sometimes only for a period. So, for example, at Tralles, one L. Aurelia Amilia, of good family, had been dedicated to the goddess, and Brunt, in his Notes on Ramsay, p. 90, that sprung from a family which had always done divine service by practising ceremonial prostitution, she likewise has so served by the priest of the temple. At the shrine of Athena in Acilinna, 'the highest nobles consecrate their daughters while virgins; and among these it is the rule to live as prostitutes before the goddess for a long time before being given in marriage.' (Strabo, p. 532.) (3) The larger body of evidence seems to refer to involuntary lepei, either of servile origin, or else at least of a status below the freedom. At Erythrae, for example, we find that they were not included in the Demes, but had so well recognized a political position that they cooperated with the civic body to erect an honorary inscription. At Ephesus the evidence of the Mithridatic decree, concerning the payment of debts and future constitution of the city, is clear. The lepei (from the verb λαμπεσ) are enumerated as a class to be enfranchised after the νικες or resident aliens, but before the ἄρατοι or freeborn. At the temple of Artemis, ad Magna, the evidence seems to be strong that if lepei were really eunuchs and not subordinates in this inscription, lepei of Apollo appear as gardners (O. Kern, Die Inschriften von Magnesia ad Maeandrum, Berlin, 1890, p. 110). And a very similar text shows a lepei holding a service relation to an individual citizen (Wedd. 1822c). The Dorian text, quoted above, seems also to imply that a lepei could be a private slave.

Those instances, and especially the relative place of the lepei in the Ephesian constitution, make it more than probable that in most cases the temple ministers either had been slaves, or at best held a sort of freedman status from the first. Hieke, commenting on the Ephesian inscriptions (Asc. Gr. 308, 450, iii, p. 256), confidently suggested that lepei were the outcome of manumission by dedication or sale to a divinity—a revival of E. Curtius' view about Hierodouloi (p. 431). But Ramsay (op. cit. 148), while inclined to admit this as possibly among several origins of lepei, object that, if those so freed always became lepei, they must be more often and more widely in accordance with the class. It may be added to his objection that we have, as it happens, no records of this sort of manumission at Ephesus, and there is no reason to think it was a universal practice. On the evidence available, it is preferable to suppose that most lepei had never been themselves slaves, but, if not freeborn, adopted a priesthood of its own motion or consigned to it by outsiders (cf. the common practice of conventual institutions adopting foundlings and orphans, who act as servants). This origin is strongly supported by the inscriptions of the shrine of Apollo Lernus (or Laius), discovered in 1867 by Ramsay and Hogarth on the Upper Messenian, which throw more light on the condition of lepei than any others.1 In the ruins of the temple itself, we found pits filled with bones in an inscription of the dedication of χριστης and τελευτης, words the usual sense of which is 'foundling' (cf. Ramsay, l. i 147, who cites Piny, ad Trag. l. x). One of these is at least 2,000 years old, as the effect on a child, now dedicated (κατορευθυς) by its proper parents, had been exposed in obedience to a dream, and found and reared (ψευθυς) by a stranger. In the eleven cases, the inscriptions are considerably added to and revised.

1 See Hogarth, in JHS viii. (1897), and Ramsay, op. cit. 1. ch. 4. In the latter publication the inscriptions are considerably added to and revised.

In the same shrine and its neighbourhood came also a large number of inscriptions concerning lepei and lepei, which are of a class known as exemplaria. In these the ministrant, having failed in some duty or obligation of service, was forgiven, or perhaps even profited, or his children exonerated, or his fault, and set a warning to all other lepei. Here it is probable to relate the case of inscription to the other, and to infer that the latter, whose inscription was the outcome of a common practice of dedicating foundlings or orphans. If, moreover, it be borne in mind that the children of these dedicated persons, in all likelihood, retained their parents' status and functions, and that there were also certain voluntary and temporary recruits, we get a class quite numerous enough to account for all the lepei for whose existence we have evidence in Western Asia Minor; a class, moreover, of sufficiently respectable origin to explain the political position which the lepei held at Erythrae and Ephesus. In literature the case of Ion, the Delphic foundling, may be compared.

The duties of hieros, of whatever origin, seem to have been in part those of hierodoulous elsewhere, but, in greater part, of more honour. In fact, it is very probable that, as Ramsay says (l.c.), they 'represent the hierodoulous character as a whole' and that their institution was modified by the development of western civilization in Asia Minor. 1 By an inscription of Chalcedon (Dittenberger, Spol. 448), we see that they took part in the sacrifices and were, as it were, holding, no doubt, as Ramsay suggests, the same position as the θεοφύλακτος of Comana, and probably also as the διδάσκαλος δαιμονίων, i.e., the musicians, cantors, freedmen, women, and priestesses, whom Lucian saw performing ἀργυρος in the precinct of the Temple of Atargatis (Athie) at Hierapolis of Syria. If, like the hierodoulous, the hieros in some cases practised ceremonial prostitution, and always did, menial offices about the shrine, we have no reason to suppose that they were to the same extent serfs of the soil, although this is possible. But what is not possible is that they inhabited a sacred settlement, χαλις ου κάμη (both words occur in the texts), and must have constituted a eunomia not dissimilar to that of the hierodoulous of Venus (Strabo, p. 557). It appears from the Lernenus inscriptions that they had obligations of personal service in the hieros at stated seasons, and were bound then, and probably for a certain period previously, to maintain ceremonial purity in garments and persons, and abstain not only from licentious actions, but from marital intercourse. The inner meaning of the latter obligation has been interpreted with great probability by Ramsay (p. 136) to imply, not that all sexual acts entailed impurity (for they might from on high be offered in the divine service), but that those usually held to be sanctioned by wedlock were especially repugnant to the cult of the Nature-goddeses of the West, the Great Mother, which was a negation of true marriage altogether, and typified the matriarchal principle. In a well-known inscription of Laurium in Attica, recording the formation of an erous, or religious club, by a Lydian slave, the conditions of ceremonial purity according to the usage of Western Asia Minor are enumerated; and, with modifications, these may be predicted of all lepei. They included, besides sexual abstinence, the avoidance of a corpse and of certain foods, including pork and garlic, and freedom from skin complaints or contact therewith (see Foucart, Greek Schools, Paris, 1873, p. 119 ff.). We find, in fact, in an obscure Lernenus text, that eating some part of the flesh of a goat called down the divine wrath on a lepei; but in this case probably the
animal was sacred. Hieroi and Hieroi, when not actually serving the shrine, seem to have lived among other people; and, as we have seen, the voluntary ministrants of the class could in some places (as, e.g., Antiakhe) receive alms. Together, after a time, it became an ordinary secular life; but, while engaged in the hieroi, they evidently had to ignore their private condition. Those born free must for the time adopt the lower political status, wives must act as unmarried (απαθητες), and married men must forget their martial duties. They must live, in fact, the divine life.

It is much to be hoped that further discoveries of inscriptions may throw clearer light on this peculiar institution of ancient religion. It seems to have contained certain elements of later monastic institutions, and may well have had a good deal to do with those which were developed at an early period in Christian Asia.

The use of ἔλεος as an adjective for persons dedicated to sacred service is, of course, common. It is found in literature as early as Herodotus (ll. 54, two αἰαντώμεναι at Dodona); but such dedication must have been much older. The best-known literary instance is Ion. The word is also, doubtless, used sometimes for hierodoulai, as by Strabo in speaking of the prostitutes of Comana Pontica—σε εἰς τοιωτερας εν λεπαλς.

Literature.—This is given in the article.

HIGH PLACE.—I. Name. The Heb. is παρασαλος, βασαλος, signifying 'high ground,' or 'a crest'; cf. the Assy. b'asa, p'asa, 'heights.' The term is used in the LXX of mount Zion (in the Prophets also bemaun); Vulg. excusus; Pesh. 'alaeddah, 'high places,' sometimes perekaddi, 'idol shrines' (as in the Heb. terms ὑψωται and ὑψω, which likewise signify 'height,' are not true synonyms of παρασαλος). The pl. bemaht is used four times in the OT either as a proper name or compounded with some other proper name (Nu 21:18; 2 K 13:13). It is also found as an element in a place-name on the Moabite Stone (line 27), and is likewise the name of a Moabite sanctuary for Chemosh (line 3). The origin of the name is unknown. In Hebrew it may have been—probably was—borrowed from the Canaanites. Ezekiel's derivation (30:10) of bemaht as 'ex. θωρακις' and 'crus' is, of course, a mere pun, by means of which the prophet expresses his contempt for high-place practices.

2. Location. In the OT bemaht are generally associated with elevations. People approaching them are said to 'go up' to (1 S 4:12, 15), and departing to 'come down' from them (1 S 4:10). In Ezek 39:18, the singular bemaht is synonymous with 'θυσία θαραμα, 'high hill.' They were usually located near cities (1 S 10:1), and were sometimes said to be in cities (1 K 13:2, 2 K 17:26, 22:1), or 'at the entrance of the gate' of the city (25:1), or 'at the head of every way' (Ezk 16:21); but also in valleys (1 K 3:25, 5:32). They were often on the hill above the town, as at Ramah (1 S 6:19). Probably every city and village had one (3 K 17:28, 32, Ezk 6). They were evidently artifically constructed, for they are spoken of as 'having been destroyed,' 'broken down,' and 'burnt' (2 K 21:23-28:10; cf. Ezk 6, Lv 25:9, Nu 33:5). They were ordinarily 'built' (1 K 11:14). It is possible that they resembled the scaffolds of the ancient Babylonians. In that case, but in any case, it is likely that they were covered, and there is little doubt that they closely resembled, and in many cases were identical with, the ancient shrines of the Canaanites (2 S 15:21, Nu 33:5). This was in keeping with early religious customs. In primitive cults the cutes of conspicuous mountains were regarded as the distinct territory of Deity. Zeus of the Greeks had many such mountain-abodes.

The gods of Persia, India, Java, and other lands were thought to dwell on lofty peaks. There were high places in Moab (Is 15:20), on which altars were erected (Nu 21:18, 22:33, Jer 46:9). From Jer 3:3 it must be inferred that shepherds, 'have heights,' were chosen because from them the view of heaven was unobstructed. In Ps 89:5 Zion is regarded as 'the mountain which God hath desired for his habitation;' and 'in the 1 K 20:1, Israel's victory is ascribed by the Syrians to Jehovah who is 'a god of the hills.' All this is in keeping with the representations in the three great periods of the OT, which make Sinai Jehovah's primitive abode (Dt 33:1, Jg 6:1, Hab 3), whether Elijah fled when threatened by Jezebel (1 K 19:1).

3. Significance.—Bemaht in the prose of the OT are commonly places of sacrifice. They are pre-eminent religious centres (1 S 9:11, 1 K 3:4, 1 S 13:7) and were ascribed to the Divine presence, and were worshipped as the representatives in the three great periods of the OT of the ancient Canaanites.

Sacred furniture.—Ancient high places possessed various sacred accessories, of which the principal one was: (1) the altar, or place of sacrifices (1 K 3:4, Hos 10:14). It might consist of an unhewn stone, or even of a mere mound of earth. In the OT it is distinguished from the high place itself (2 K 23:14, Is 36, 2 Ch 14). Before it the sacrifices were presented. In the Canaanite hekhal the masebeh, or sacred pillar of stone (Hos 10:4). It might consist either of a rough unhewn boulder or of a cistellus pillar, which the worshipper regarded as the representatives of Deity (Ex 29:13, De 5:28). As the times these pillars were left unhewn because they were regarded as sacrosanct, the belief being that, if they were cut or carved by human hands, the names were driven out of the stone. Later, artificial obelisks took their place. To the ancient Canaanites the masbeh was the symbol of the shrine of Deity. At Bethel (Gen 31:30-31); at Ex 34, 'what?'; 8, of course, as a mere pun, by means of which the prophet expresses his contempt for high-place practices. Perhaps was—borrowed from the Canaanites. Ezekiel's derivation (30:10) of bemaht as 'ex. θωρακις' and 'crus' is, of course, a mere pun, by means of which the prophet expresses his contempt for high-place practices.

3. Another important part of the furniture of a high place was the dacohe, or sacred pole. It consisted of an artificial pole of wood, or stump of tree, planted in the earth (Dt 16:1), and regarded as a symbol of the goddess Ashtoreth, according to some, though this is not demonstrable. The dacohe was artificially constructed of wood (Jg 6:20, 1 K 14:24, 16:29, 2 K 17:17, Is 17:17), in image like form (1 K 15:14), and could be 'plucked up' (Mio 3:4), 'cut down' (Ex 24:17), 'broken into pieces' (2 Ch 34:1), and 'burnt' (Dt 12:1). It stood in close proximity to the masbeh and to the altar (Jg 6:25), and might be set up even beneath living trees (2 K 17:17). Whether this was customary is, of course, a matter of dispute, but it was evidently akin to tree-worship, the tree probably being revered as an abode of Deity (Dt 11:13), and as the symbol of fertility (Dacohe stood in Samaria in the days of King Jehoshaph (2 K 13:18), probably the one made by Ahab (1 K 16:24). Manasseh also made an dacohe, which he set up in the Temple in Jerusalem (2 K
but it was destroyed by Josiah (23:7).—(4) Ne
to the north, on the left, were rooms, chambers,
or sacred halls, called ‘houses of high places’ (1 K 12:31, 13:2, 2 K 23:4). These were used probably as dwellings for the priests, and as places where the infectious meals were eaten (1 S 20:3)- quite possibly as well as the places of the immoral worship—religious prostitution (Am 5:4), and the number of these ‘chambers’ mentioned by Ezekiel 16:14, 15, 16). These chambers also sheltered the images of the gods worshipped (2 K 17:12; cf. Jg 17). Tents, however, were used for the same purpose (2 K 23:19, Ezk 16:11; cf. Hos 9:1) for example, David pitched a tent to shelter the ark (2 S 6:7-17, cf. 1 K 2:25, Ex 33:11; cf. also the proper name Metsheil, symbolizing ‘tent of the high place’, Gn 30:18). The Carthaginians are said to have used tents as portable sanctuaries (Diod. Sic. x. 66).—(6) There were attendants also at the high places, sometimes called kohanim, ‘sacred priests’ (2 K 22). Besides these, there were goldsmiths, ‘male prostitutes, and goldsmiths, sacred harlots,’ in connexion with high places (2 K 23:7, 1 K 14:15, 2 K 23:21, 2 Chr 23:17, Hos 4:10).5. The cultus.—In general the worship practised at the bnimah was not only ceremonial but sensual. It was borrowed largely from the Canaanites. Joy and feasting characterized their ritual (1 S 9:13). The rites performed probably typified the annual renewal of Nature. Tithes were brought thither (Am 4; cf. Gn 28:22). Doubtless many of Canaan’s high places were dedicated to Jahweh. Solomon, for example, Am 5:4. Sacrifices lie in high places of Gibon, offering a thousand burnt-offerings upon the altar there (1 K 3:5), and to please his foreign wives he built other high places to Chemosh and Molech, burning incense and sacrificing to their gods (1 K 11:5). The Canaanites and Israelites may, indeed, have joined in the worship of Baal at some of these bnimah. Whether they did or not, by the introduction of foreign cults the worship of the sanctuaries became corrupt. It is no exaggeration to say that the grossest and most scandalous enormities occurred in the O.T. dwellings associated with high place worship. Hosea paints a vivid picture of their practices, though he mentions bnimah by name only once in all his prophecies (10:9). To him the high places of Aven were ‘the sin of Israel.’ Accordingly, he warns Israel against such sacrifices and libations (9): points a finger of scorn at their rewards of adultery—bread, water, wool, flax, oil, drink, grain, new wine, silver and gold, which in turn bestow upon Baal (28:7); denounces them for burning incense to other gods, themselves clad in gala dress and decked with earrings and jewels (28:2); threatens destruction upon the rewards of licentiousness received from the high places (28:8).—(7) Michaelis gives a striking description of the high places practised at the bnimah (28:4), explaining how the people in these sanctuaries are described as sociology among the oaks, slay their children in the valleys among the smooth stones (regarded as the abode of the demons, or god), pour out drink-offerings as sacrifices on high mountains, and set up memorials of shame (perhaps alluding to phallic worship; cf. Ezk 16). The same passage describes Moab as literally wearing himself praying upon his high places (16:15; cf. 1 K 18:19).6. History of high places in OT.—(1) In the Pentateuch, placed in the tabernacle and temple, are mentioned in either Genesis or Exodus or, in fact, as places of worship, in the entire Book of Deuteronomy; cf. however, the figurative allusions in De 21:7, 28, in which to ‘ride’ or ‘tread’ upon the enemies’ high places signifies to trample them underfoot. In Lv 20:18 and Nu 21:21-24:33 however, they are spoken of as places of worship. Two of these passages (Lv 20:18, Nu 21:21-23:33) warn Israel against the contaminating and degenerate influence of the heathen practices associated with such sanctuaries. They are the only passages in the He-.
tenach which use the term ‘high places’ with a religious significance. In Nu 21:21-23 and Jos 17:1 the word is used as a proper name. The plural form is employed in all these instances. (2) From Joshua to Solomon.—There is no mention by name of high places in the Book of Judges, and only a few cases (all in a single context) in the Books of Samuel refer to bnimah as sanctuaries. The allusions in 2 S 15:18-22 are poetical and figurative. In the classical passage in 1 S 18:12, 13, 19:10-13, Samuel the seer is represented as going up to a high place to worship, while the people wait him, expecting him to bless the sacrifice (1 S 18:14). While there, he is visited by Saul, who, with his servant, is searching for his father’s lost asses. Saul and his attendant are invited to join in the sacrificial meal, which they eat together in the napph, or sacrificial dining-room (1 S 18:12). Later in the account, mention is made of a band of prophets who are expected to come down from the high place, having presumably been there engaging in religious services (1 S 10:5). The story gives no hint that there is anything illegitimate in sacrificing at such a sanctuary. In David’s day, Gibon was the great high place (1 Ch 18:21). Under Solomon, also, the people continued to sacrifice at high places. When there was a house built for the name of Jahweh until those days (1 K 3:5). Even the king himself ‘went to Gibon to sacrifice there, for that was the great high place’ (1 K 3:4. 2 Ch 1:3). All this was in strict keeping with the traditional laws of Moses; namely, Ex 20:25, which allowed sacrifices to be made ‘in every place’ where Jahweh should record His name. De 12:11 insists upon the unity of sanctuary only when God has given Israel rest from all their enemies round about, when Israel shall conquer Canaan and the high places associated with high places worship. Hosea paints a vivid picture of their practices, though he mentions bnimah by name only once in all his prophecies (10). To him the high places of Aven were ‘the sin of Israel.’ Accordingly, he warns Israel against such sacrifices and libations (9): points a finger of scorn at their rewards of adultery—bread, water, wool, flax, oil, drink, grain, new wine, silver and gold, which in turn bestow upon Baal (28:7); denounces them for burning incense to other gods, themselves clad in gala dress and decked with earrings and jewels (28:2); threatens destruction upon the rewards of licentiousness received from the high places (28:8).—(7) Michaelis gives a striking description of the high places practised at the bnimah (28:4), explaining how the people in these sanctuaries are described as sociology among the oaks, slay their children in the valleys among the smooth stones (regarded as the abode of the demons, or god), pour out drink-offerings as sacrifices on high mountains, and set up memorials of shame (perhaps alluding to phallic worship; cf. Ezk 16). The same passage describes Moab as literally wearing himself praying upon his high places (16:15; cf. 1 K 18:19).6. History of high places in OT.—(1) In the Pentateuch, placed in the tabernacle and temple, are mentioned in either Genesis or Exodus or, in fact, as places of worship, in the entire Book of Deuteronomy; cf. however, the figurative allusions in De 21:7, 28,
further and farther from the worship of Jehovah, impure, as the prophet, as the people: did, and now, as a priest, could protest only against the worship of Israel's sanctuaries rather than against the sanctuaries themselves (1 K 19:14). On the other hand, the prophet of the 8th cent. attempted more than merely to reform the cultus of those sanctuaries. Hosea prophesies that the high places of Aven, the sin of Israel, shall be destroyed (10:8). Amos also declares that the high places of Israel shall be desolate, and the sanctuaries of Israel shall be laid waste (7:14). The only other allusion in Amos to high places is figurative—that of Jehovah as treading upon the high places of the earth (4:1). When the redactor of 2 Kings sums up the reasons for the downfall of North Israel, he ascribes it to their having built high places in all their cities and there burnt incense, as did the nations whom Jehovah carried away before them (17:18).

6. In Judah.—Under Rehoboam the people built high places in Judah, and the king appointed priests for them (1 K 14:2, 2 Ch 11:15). Asa is said to have taken them away out of Judah (2 Ch 14:4), but not out of Israel (2 Ch 15:1, 1 K 15:14). Jehoshaphat likewise removed the high places from Judah (2 Ch 17:7), but not from Israel (1 K 22:20, 2 Ch 29:25). On the other hand, Nebat, who married the idolatrous daughter of Ahab, actually made high places in the mountains of Judah (2 Ch 21:16), which need of his successors Jehoshaphat (2 Ch 13:9), Amoniah (14), Uzziah (15), and Jotham (15)—removed. Ahaz actively sacrificed and burnt incense on them (16, 2 Ch 28:28—). Hezekiah, on the other hand, removed them, instituting S. I. according to a genuine religious reformation (2 K 18:2, 2 Ch 31:1), the history of which is most reasonably attested (2 K 18:2, 2 Ch 31:2). But Manasseh rebuilt them (2 Ch 33:19). Josiah, however, removed all, and took and carried out a most drastic reformation, putting down the idolatrous priests and destroying the high places of all his predecessors, including Solomon's (2 K 23:1, 2 Ch 34:4). During all this period of schism the prophets of Judah say little or nothing against the high places as such. Isaiah, for example, shows no pronounced hostility to high places themselves (14:10, 15:10, 36:19, 58:1). Micah, likewise, is all but silent concerning them, his allusions being figurative rather than literal (1:4, 4:4), cf. Mic 6:8. Jeremiah rebukes his people for having 'built the high places (the LXX 'high places,' the A.V. 'hills')' (Jer 7:10), the ruin of the sons of Hinnom, to burn their sons and their daughters in the fire (7:31, 32), because they are centres of sin throughout all their borders (17), and he threatens in Jehovah's name to cut off (21:12). He points a finger of reproach at those who labour to make them attractive (16), and warns those who congratulate themselves on possessing 'the ancient high places' (31). Habakkuk's single allusion to high places is a figurative one (3:3).

The only other references to bemâqâ in the OT, with one exception, are Job 30:7 and Ps 116:18, both of which are figurative; the exception is Ps 68:11, which is a literal commentary on Israel's repeated depredation from the true worship of Jehovah. (44/4 for the Edomites. After the fall of Jerusalem we hear little of high places. The captivity accomplished what neither Hezekiah nor Josiah could do. The people had learned at great cost, the folly of idolatry, and her sons and grandsons, who returned after 586 B.C., had no disposition to revive the old local cults whose continuity had been so long interrupted. In the 4th cent. B.C., however, the Jews of Babylonia and Egypt, in particular, and in the 3rd cent. B.C., at various places in the Delta of Egypt.

7. Recent discoveries.—During the past fifteen years several ancient bemâqâ have been discovered, by the chief among which is: (1) The Great High Place at Petra, the capital of Edom, which was discovered by the present writer on 3rd May 1900. S. I. Curtis was shown it July in the same year. For location, size, completeness, and importance this high place still holds first rank among all the ancient sanctuaries yet found to exist. Recent writer speaks of it as 'undoubtedly existing already in the days of Moses' (F. E. Hobkirk, From the Nile to Nemo, Philadelphia, 1912, p. 536). It is situated on the very top of one of the most conspicuous peaks which surround the unique capital of Edom. Rock-cut stairways lead up to it from different directions. The entrance, a gateway 100 ft. apart, situated on the brow of the promontory, mark the approach from the S.E. The oval rock-dome on which the bemâqâ proper stands is some 300 ft. long (N. and S.) by 100 ft. broad (E. and W.). The view from the summit is unobstructed. Among the principal features of the sanctuary is the large, deep rock-cut court, 47 ft. long (N. and S.) by 20 ft. broad (E. and W.), where the worshippers probably stood. Near the centre of this court there is a raised platform 41 ft. high, measuring 13 by 13 ft. (N. and S.), on which the victims for sacrifice may have been slain. To the west of the court, some 15 ft. distant, with four steps leading up to it, is an altar, 3 ft. larger than the court (E. and W.), and 3 ft. high, with a rock-cut passage 32 in. broad, running about it on the N., W., and S. sides. In the surface of the altar there is an irregular oval rock platform, some 12 ft. 9 in. square, with circular depressions on the top surface (the one circle being inside the other), the diameter of the outer circle being 3 ft. 9 in., and that of the inner 17 inches. These were probably used as the place for pouring out libations (Ex 29:4). A drain from one is more explicit, and probably conveyed the water which carried the blood, or water, as the case might be, towards the stairway by which the platform was approached (Ex 29:4). There are two water cavities, which were probably used for purposes of ablution. About 25 ft. S. of the court is a pool or cistern excavated in the rock, and at one time cemented, whose dimensions, though somewhat irregular, are approximately 10 ft. long (N. and S.) by 8 ft. broad (E. and W.) and 4 ft. deep, with a drain to carry off the overflow. Two trees, a stump of growth naturally, and yet in one case measuring 2 ft. 10 in. in girth, are to-day growing in the near vicinity. From any part of the sanctuary the traditional Mt. Hor is visible. While this bemâqâ is old, it cannot be demonstrated that it is the most ancient high place discovered, or even the oldest of those (in all 20 or more) now known to exist at Petra; all are devoid of inscription and ornamentation. At the same time, there is no doubt that this Great High Place was at one time the central sanctuary of the Edomites, and the town, indeed, marks the very spot where religious rites were celebrated by the sons of Esau three thousand years ago.

2. High Place at Gaza.—This bemâqâ was
Haifa more recently found two others at Magiddo, and more recently still, Ktillet of Leipzig discovered cup-shaped depressions or hollows in the rock surfaces at Mepha, near Jeru.

The site of the ancient city of Bethhehem was discovered by T. E. Lawrence at Tell el-Mutesellim, Gibbon, Tell es-Safi, and Tell Sanaa by Guthrie, Vincent, and others. The latest discovery reported is that unearthed during June 1931 by D. MacKenzie, field-director of the Palestine Exploration Fund, at Ain Shemas, the ancient Bethhehem (cf. PEFQ, Oct. 1932, pp. 117-178).

While cutting a trench, from north to south, across the central area of the city, MacKenzie found, towards the middle of the trench, five pillars lying on their sides as though they had been knocked down, the one on the east side being broken in two as if it had been purposely smashed. These stones are regarded by him as the sacred pillars, or bēmāḥ, of a high place. Their tops are rounded, but their bottoms are flat for better standing. Three of the five bear marks of tools. Two are flat like the headstone of a tomb, and are composed of a rough-surfaced rock, while the other three are composed of a light-colored limestone which seems foreign to the environments of Bethhehem. MacKenzie conjectures that they were set up in veneration of the dead, the spirit of the departed being imagined by the ancients to take possession of his pillar on the performance of certain ceremonial and magic rites for that purpose. At a point west of one of the high places stones was found, which leads by a shaft through the rock down into a great subterranean chamber, or burial cave, resembling those found at Gezer and Tell el-Mutesellim.

The cave extended away from the well, and was entered by pillars of the high place, and contained all the paraphernalia of the cult of the dead, there in position as they had been left thousands of years ago.

HIGH PRIEST.—See Priest.

HILLUL.—Hillel was a most distinguished teacher, and head of the Sanhedrin in Jerusalem during part of Herod's reign. Known as 'the Babylonian' ('Paestm, 68c; Sukkoth, 30c) be- 1 See figures reproduced in Driver (I. C.), loc. cit., p. 68 and following pages.
HILLEL

cause he was a native of Babylon, he is also designated as Hillel the Elder,' either to distinguish him from later teachers of the name or to indicate his official rank (Běděk, 16a). The dates of his birth and death cannot be fixed accurately. From the fact that he was one of the pupils of Yohanan ben Zakkai and Abtalion (see C. Taylor, Sayings of the Jewish Fathers, Cambridge, 1897, p. 18), and that tradition is emphatic in describing him as in his prime when he first arrived in Jerusalem, the inference is warranted that he was born about a century and a half before the destruction of the second Temple. No credence attaches to the statement (Sipuro Berděk, 36) that he was forty years of age when he left Babylon, that he spent forty more as a student under the 'pair' (see Taylor, p. 14, note 9), or that he was named and elected presidemnt of the Sanhedrin at the age of eighty, and filled that office for forty years more. All this is clearly due to an endeavour to make Hillel's career a parallel with that of Moses, just as he is hailed elsewhere (Sukkoth, 20a) as a second Ezra, who, like the first, comes from Babylon to rescue God's Law from complete oblivion. Talmudic report names him among the men who held the Presidency about 100 years before the national catastrophe (Shabbath, 16a). There is, therefore, good ground for dating his death as about 50 B.C.

Of his family life is known. Tradition traces its pedigree, through the female line, back to king David (Jerra, Ze zu, 41). His father's name is not given, but a brother to Shabbetai, who is mentioned as engaged in mercantile pursuits (Sotā, 21a), and from him Hillel is supposed to have received subserviency assistance, though the passage just referred to admits also of the contrary interpretation.

Hillel from his earliest youth is represented as a student of the Law, differing from his contemporaries in the respect that he was a Babylonian (see above). He came and decided the question in the affirmative, considering that the Passover sacrifice sat on the Sabbath-sacrifice (תּוֹך הַנִּפְנוּך). He based his opinion on these considerations: Passover was, like the daily offering (תּוֹך יִפְנוּ), a community offering, with no religious purpose; and, as the Passover sacrifice also did the Passover lamb, and was, moreover, one of the sacrifices used in connection with the Passover-sacrifice. Hence the latter is in the same category as the former. Again, with his sacrifice, the latter entails lighter punishment than non-observance of the Passover, which is railed at, and excuseth. The presupposition in favour of the Passover is, therefore, all the stronger than it reasonably could be in the case of the others. These arguments failed to convince his opponents until Hillel had ascertained that he had heard them from his teachers, whereupon he was appointed to the Sanhedrin.

The historical accuracy of this story may safely be doubted. The narrative proves, however, that the Babylonian for some time must have led a growing opposition to the Rabbis of Jerusalem. Hillel was accustomed to bear on the text of Scripture a method of interpretation not in favour with them, and clenching his arguments by appealing to the authority and precedents of his masters. Finally, Hillel succeeded in dialging the Bathteires. His main support may have been Herod, who at this period of his reign was anxious for peace, and, therefore, not disinclined to the election of a man of peace, such as Hillel was (see below), to the presidency.

Certainly it is that Hillel is associated with the formulation of a set of rules (קְדוֹשִׁים, 'measures'). He is credited with having developed seven of them—by later teachers enlarged to thirteen. Though probably not the inventor of the method, with its renowned powers of reducing a mass of teaching to a comprehensive code, as of Mosaic origin (Sanh. 32a), Hillel may be held to have been among the first to divide these rules into distinct classes. Hillel is also shown in Sipuro at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara ish at the end of the Bara
Hillel

Egoism and self-sufficiency found no favour in his eyes.

'Separate not thyself from the community, and trust not in thyself before the day of thy death; judge not thy fellow until brought into his place; do not delay teaching; say not, 'When I have leisure, I shall study'; perish he who says, 'I have leisure' (b. Ḥeb. ii. 18; see Taylor, op. cit. p. 30, note 11).

Ignorance and vulgarity procure piety.

'No boor is a miscreant; nor is the unmixed scapegoat; the shameful is not apt to learn, nor the passionate (prone to anger) fit to teach. Nor is every one that has many traffic wires, in a place where there are no men, endeavour to be a man' (b. Ḥeb. i. 6).

The thought that, as we do unto others, so will we be done by, he put into this language, suggested by the sight of a skull floating on the water:

'Because thou drownest the trees, and they that drowned thee shall in turn be drowned' (b. Ḥeb. 7).

That ease and luxury are, in the ultimate analysis, burdens is the dominant emphasis of this saying of his: 'More flesh, more worms; more maid servants, more lewdness; more men servants, more thefts' (b. Ḥeb. i. 6). 'But he who hath gotten unto himself the words of the Torah hath gotten unto himself life in the world to come' (b. Ḥeb. i. 6).

For most of the preceding sentences, he could easily have selected as supporting authority one or the other Biblical passage. In recording other sayings of his, this has been done. (W. Bank, Die Agada der Tannaiten, i. 2, 4 Hillel), and, as the apostrophe to the skull in Aboda ii. 7 suggests, he was by no means averse to employing the meshal, verbal, or simile, pointing to the status of the kings in the theatres and the circuses, he deduces from the duty to keep them clean by washing and re-securing them, which is done by the house-children, that 'the one on man to keep his body clean by bathing, for the human body is made in the image of God' (Midrash Lec. Babba xxixv. 1, Yalkut to Pr 110).

The soul he likens to a guest whose entertainment (i.e. study) was expected of man (b. 1).

The proselyte anecdotes of which Hillel is the hero are characteristic tributes to his humanity, his forbearance, his patience—traits which stand out all the more prominently because they are in contrast with the contrary dispositions of his colleague Shammai. How Hillel remains unperturbed under the greatest provocation is told in the story of the man who made a wager that he would succeed in angering Hillel, and failed ignominiously (Aboda b. 31a; Taylor, p. 23, note 23). The 'Golden Rule,' virtually the saying, 'Thou shalt love thy neighbour as thyself' (Lv 19:18), he names the fundamental principle of the Jewish religion, and designates every thing else as an unfolding thereof. Thus, in conversation with a proselyte who professed to accept Judaism provided it could be taught him during the time he could stand on one foot (i.e. stante pede, briefly and without unnecessary delay), Hillel replied: 'What is hateful unto thee do not do unto thy fellow. This is the great foundation; the rest is commentary. Go now and learn.' This negative formulation of the 'Golden Rule' is not less comprehensive than its NT counterpart (see J. E., art. 'Golden Rule,' vi. 21; and art. under that title in the present work).

The esteem in which Hillel was held led posterity to attribute to him the knowledge of God's true name and that of the speech of plants and birds and of many peoples (A. Jellinek, Beth Ha-Ra-Mishraḥ, Leipzig, 1858-73, ii. 117; Maase. Sepherin, iv. 9). But the tribute paid him at his like in the lament, 'Woe! Departed is the pious man. Woe! gone is the humble man, the disciple of Ezra' (Sanh. 110b,据此), who in his worth was recognized by those who had heard him praise God every day (Babā, 18c), who had been inspired by his faith in God, so intense that he was confident of eternity at adversity did not come from his house (Berakhot 60b; Jer. Berakhot 16b).

Humility, wholly free from pretense, is the keynote of this observation:

'A name made great is a name destroyed; he who increases not, decreases; and he who will not learn (perhaps teach) disapprehends; and he who serves himself with the thorn (is arrogant) perishes' (b. Ḥeb. 14).

The clearest insight into the relation between egoism and altruism, posing the duty of self-reliance and self-development as the means of rendering service unto others—a conception which is characteristicly Jewish and soundly and sanely limits both self-affirmation and self-aggrandisement—is exhibited in the words:

'If I am not for myself, who am I? And if I am only for myself, what am I? If not now, when then?' (b. Ḥeb. 15).

Not many ritual-legalistic decisions are remembered as Hillel's. On a few points he is reported to have differed from his Vice-President Shammai, who inclined to more rigid constructions of the Law. Both of them founded schools, not always agreeing in theory or practice. But these controversies are of too technical a character to be noticed. On the other hand, a certain well-known affair, termed the定制 of Mishnaic law (Yebḥaḥanim, 37a).

Of greater interest as throwing light on the attitude of Hillel to the letter of the Law are the Tosefta, the modifying arrangements, of which he was the author. War, failure of crops, and the policy of spoliation pursued by Herod, which led to extraordinary burdens in taxation, and reduced the people to distressing poverty. The dispossession was forced to resort to loans, while those in better circumstances were little inclined to make the advances in view of the provision of the Pentateuch, according to which the advent of the Sabbatical year 'outlawed' all indebtedness. To meet the situation, Hillel devised the prosed (ဆու, sg.), which enabled the creditor, by making the court his agent, to whom before the Sabbatical year he had assigned his claim, to collect his due from the debtor's property. The saying of his, this has been done. (W. Bank, Die Agada der Tannaiten, i. 2, 4 Hillel), and, as the apostrophe to the skull in Aboda ii. 7 suggests, he was by no means averse to employing the meshal, verbal, or simile, pointing to the status of the kings in the theatres and the circuses, he deduces from the duty to keep them clean by washing and re-securing them, which is done by the house-children, that 'the one on man to keep his body clean by bathing, for the human body is made in the image of God' (Midrash Lec. Babba xxixv. 1, Yalkut to Pr 110).

The soul he likens to a guest whose entertainment (i.e. study) was expected of man (b. 1).

The proselyte anecdotes of which Hillel is the hero are characteristic tributes to his humanity, his forbearance, his patience—traits which stand out all the more prominently because they are in contrast with the contrary dispositions of his colleague Shammai. How Hillel remains unperturbed under the greatest provocation is told in the story of the man who made a wager that he would succeed in angering Hillel, and failed ignominiously (Aboda b. 31a; Taylor, p. 23, note 23). HYNARITE.—Hyna means 'abandoned', 'low',
'miserable'; gyna means 'carriage', 'means of progression', 'vehicle'; the compound word
Hynayana, as used of religious opinions, means a wretched, bad method, or system, for
progress on the way towards salvation. It was a term
of abuse occasionally used by some of the later
Buddhist authors, who wrote in Sanskrit, to stigma-
tize or depreciate those older teachings which they
desired to supersede. The use of the term in India,
however, is exceedingly rare—not that the theo-
logians of the later desetic Buddhist schools were not
sure that the word was no
politely, and the needs of controversy could be met
without it. It might be now left in fit obscurity,
had it not been adopted by one or two well-known
Chinese and European authors, to whose sym-
pathies it appealed, and who have made it a corner-
one of their views on the history of Buddhism.
The meaning and object of its use makes it desire to summarize the little
that is known on the subject of the so-called Hynayana
schools.

A. Origins and date of the term.—In the present
stage of our knowledge of the history of Buddhism
we suffer from a serious gap in the chain of avail-
able authorities. From the rise of Buddhism
down to the time of Asoka (g.c.), we have docu-
ments of varying age and importance, which enable
us to draw a fairly accurate picture of the original
Buddhism as understood by the early Buddhists,
and also of the changes in doctrine down to the
close of that period. The majority of these
documents are in Pali, but there are a number of
side-lights as to detail from other sources, both
cary and later.
The following period of about three centuries,
from Asoka to Kanishka, is an almost complete
blank. Even the date of Kanishka is uncertain.
The able and sober discussion of the question by
H. Oldenberg in the JPTS for 1912, the latest
utterance on the point, suggests the end of the
1st. A.D., or the commencement of the 2nd as the
most probable approximate time of Kanishka's ac-
cession. We have notices from Chinese sources as
to national migrations in Central Asia, which re-
sulted in successive movements of nomad tribes
into the districts adjacent to the extreme N.W. of
India. These notices are not always very clear,
and at times appear conflicting, but they are suf-
cient to show that such movements in Central Asia
were continually taking place during the centuries immediately preceding the Christian era, and cul-
iminated in the conquest, not indeed of India,
but of Kashmir and the Punjab, and of the districts
round Mathur and Gujarâî, by hordes of uncivil-
nized nomads, usually Hans or Bakers by race. These
aliens adopted the religion, language, and civiliza-
tion of the Indian peoples, mostly Buddhist, whom
they conquered. Kanishka, the most famous and
powerful of their princes, became a Buddhist, and
lavishly supported the Buddhist scholars in Kash-
mâr, who belonged to the Soabasvatsa, the Recluse
school.
The result of these events was a momentous
change affecting all the subsequent history of
India.

Politically the centre of power was moved, for
centuries, from the east to the west of the con-
tinent. Linguistically the Koâla dialect, of which
Pali is the literary form, had to yield its place as
the linga franca of political, religious, and literary
circles, to the dialect of Kashmir, of which Sanskrit
is the literary form. In religion a complete trans-
formation was gradually but surely brought about.
The brave barbarians became Buddhist so far as
they were able. But they were so soaked in ani-
mistical superstitions that their ability was so nil to
the task only after they had brought down the
religion to the level of their own understanding.
There had been a slacking already. It is ap-
parent in the later parts of the Wasagya themselves,
and is shown quite clearly by the questions con-
sidered in the Kaitha Vatihas as being discussed in the
schools at the date when that work was com-
bosed (c. 290 a.C.). From the time of Kanishka
the whole power and influence of the Imperial State
were thrown on the side of the animistic tendencies,
and it was the main task of the Saivites and Jains,
who were the chief opponents of Buddhism, to
supersede the latter and take the place of the
Kushan Tatas, who was the main that the important
of the innovations were introduced into Buddhist doctrine.

A precisely similar series of events took place in
Europe. A vanguard of the Suebi and Alans, which
broke the N.W. frontiers of India, and died
indeed, to similar national movements in Central
Asia, broke in its turn over Europe. The Goths
and Vandals adopted the faith of the Roman
Empire. But, in adopting it, they contributed
largely to the changes—some would call them
deteriorations—that had already set in. When the
conflict of nations subsided, the religion of the
Roman Empire had become Roman Catholicism;
politically the Continent was broken up among a
large number of petty principalities, and the
so-called Vivant was one of these. It was
authorised pattern.

The earliest period in India, we find
Buddhists who had borrowed from the pagans, and
pagans who had adopted and improved upon the
conflicting speculations of the many Buddhist
schools. Philosophy was very much alive; and
quite a number of conflicting systems were able, in
the absence of even any attempt at authoritative
suppression, to appeal to the suffrages of inquirers.
It was at this stage that the word Hynayana came
into use. The oldest datable mention of the word is
in the Record of Buddhist Kingdoms by Fa-Hian,
written shortly after his return to China in 414 a.C.
He states, in his account of Shen-Shan (N.W. of
Tibet):

'The king professed our Law (Dharmas), and there might be
in the country more than three thousand monks who were all
students of the Hyna.'

In about half a dozen other passages he has
similar statements. Legge, in his note to one of these
passages, says that there were three vehicles—the
larger, smaller, and middle (mahâ, hina, and mân-
âya), suggesting, therefore, that Fa-Hian had
these three in his mind. It is, however, by no
means certain what the word, at that date, exactly
meant, or what Fa-Hian had in view, whether he used the phrase the empira, or
picked it up during his travels in India. It is not
probable that Legge's suggestion is right. That
Group of three vehicles has not been found else-
where. The Saddharma Pundarika (G. Dhamma,
67.28) has, however, a different group of three: sravaka,
pacoeka-buddha, and mahâ—in which Hyna is
does not occur. This group seems to have been
widely known, as it is found also in the 3rd cent. in
Ceylon, only applied to the word (suchana) instead
of to the vehicle (gades).
The word occurs in the Lalita Vistara,¹ in a long list of qualities or states of mind, each of which is said to conduct to some other quality. In this it is said to be thought of as a quality of the beginning of religious light, conducive to scorn for a mean method (Nipanas).

Unfortunately, the date of the existing text of this work (which has been certainly recast once, and perhaps oftener) is late and uncertain. Such a list as this lies peculiarly open, in a re-casting of the work, to sectarian interpolation; and the passage throws little light on the meaning of the word, as it is short and ambiguous. It might equally well mean the Hinayana.²

Nearly two centuries and a half later we know that another Chinese pilgrim, T-Esah, explained the word Hinayana as meaning one who did not believe in the various deities and heavens created by the later schools. Fa-Hian may have thought the same, or he may have had, not a negative, but a positive test: that a Hinayanaist, for instance, was one who still believed in the Aryan eight-fold Path; or he may simply have considered that a Hinayanaist was a man who belonged to one or other of the eighteen primitive schools. The last seems the most probable explanation. It was the easiest way to draw the line. We know from Fa-Hian’s 36th chapter (Legge, p. 98) that he was familiar with the eightfold system current among so many of the Buddhists. But, whatever be the exact meaning attached to the word Hinayana by Fa-Hian, it is probable, from his use of the Chinese equivalent of it, that the word, and with it the division of Buddhists into Hinayanaists and Mahayanaists, was already current in India in the 4th cent. A.D.

2. The Hinayana schools.—We have quite a number of copies of the list just referred to. The Sinhalese give it in half a dozen different books from A.D. 500 to about 1000. They all agree in the names, having taken them from the list of the stūpa, but now lost, Sinhalese Atthakathā. Saint Julien⁴ reproduces five distinct lists from the Chinese, Schiefner, Wisselief, and Rockhill give us other lists from the Tibetan.⁵ These eight differ from one another, and from the Pali list, in a few of the names; omitting one or two, and adding others. Each of them also pretends to be able to say of each school that it arose out of some other, and gives the name of the latter. In the details of these lists and these differences, as they differ; and it is most unlikely that their language can ever have been exact except in a very limited sense. They can, at most, only afford us some guide to the relative age of the various schools within the period of a century and a half—since the time of the Council of Vesali to that of the Council of Patna (about 400-520 A.C.)—within which they are all said to have arisen.

All the lists agree, however, in one point of great historical importance. Each of them gives one particular school, the School of the Preceptors, or the School of Distinction (Thera-adina, Vihaja-adina), as the original from which each of the seventeen others was ultimately descended.⁶

We have information as to some of the doctrines of several of these schools in the Katha Vatthu (3rd cent. B.C.) and its commentary (6th cent. A.D.).

6. W. Geiger, Mahab explan (w. P.T1, 1812, p. 377). He has made a list of the names of these schools in the fasc. 5 of his Indische Forschungen.

This has been specified, and discussed, together with other information, in two articles by the present writer.¹ The conclusions reached are:

(1) The data are not sufficient to enable us to give a complete description of the doctrines, or even of the innovations, current in any one particular school.

(2) Both the commentator and Fa-Hian, writing in the 5th cent. A.D., are agreed in granting only to three or four of these schools any considerable importance.

(3) No commentator, and Fa-Hian, writing in the 5th cent. A.D., are agreed in granting only to three or four of these schools any considerable importance.

(4) Yuen Chwang—writing at the end of the 7th cent. A.D., attaches importance to the same schools only. It is very doubtful whether any of the others had been, at any time, either large numbers or much influence.

(5) The figures given us by Yuen Chwang—writing at the end of the 7th cent. A.D.,—are not always the same for the same schools only. It is very doubtful whether any of the others had been, at any time, either large numbers or much influence.

(6) The figures given us by Yuen Chwang—writing at the end of the 7th cent. A.D.,—are not always the same for the same schools only. It is very doubtful whether any of the others had been, at any time, either large numbers or much influence.

(7) From what has been stated above as to the number of the lists of the 18 schools it seems clear that the number 18 is purely conventional—a round number.

We were to make a new list, including all the names found either in the old lists or in inscriptions (such, for example, as those mentioned in J.E.A.S., 1891, p. 410; 1892, p. 597), we should have 28 or 30. That none of the names appears in the earliest inscriptions would seem to show that not much weight was attached to them in the earliest times. When the schools are mentioned, the name of each is given separately. A Hinayana school as designating a body of men is never referred to. So with the Mahayana. There are a score or more of schools that must be included under that name. Some of them to-day in Japan have become sects with separate revenues, government, dress, doctrines, and services. To compare Hinayana with Mahayana it is necessary, if one would serve any useful historical purpose, to compare the whole of the one with the whole of the other. The position will best be understood in the West, if one pointed out that the Mahayana schools bear a relation to the Hinayana schools similar to the relation borne by the various Roman and Greek Catholic schools to the early Christian ones. This similarity is due to similar causes (one of which was mentioned above). But there are also remarkable and interesting differences. The most noteworthy of these is that the early forms of thought unsubstituted

¹ J.E.A.S., 1891, 1892.
HINDUISM

HINDUISM.—I. Definition.—'Hinduism' is the title applied to that form of religion which prevails among the vast majority of the present population of the Indian Empire. Brahmanism (Skt. Brāhmanism), which is the term generally used to designate the higher and more philosophical form of modern Hinduism, is more properly restricted to that development of the faith which, under Persian influence, succeeded to Vedicism, or the animistic worship of the greater powers of nature.

The name 'Hindu' derives its name from the term 'Indus,' which is a corruption of the Persian word 'Ind,' or 'land beyond the Indus.' The term, however, is not restricted to the country drained by the river Indus, but includes the whole area drained by the river Ganges and its tributaries, from the Himalayas to the sea. Hinduism is the name given to the religion, culture, and history of the people of this region.

The word 'Hindu' is also used to refer to the people of India, who share a common culture and language. The term is also used to refer to the religion practiced by the people of India, which is known as Hinduism.

2. History.—The history of Hinduism can be traced back to the Indus Valley Civilization, which existed around 3300 BCE. The civilization was characterized by the development of a complex society, with well-organized cities and a hierarchical social structure.

The Indus Valley Civilization was succeeded by the Vedic period, which began around 1500 BCE. During this period, the Vedic religion emerged, which was based on the sacred texts known as the Vedas. The Vedas consisted of hymns, rituals, and philosophical teachings.

The Vedic period was followed by the Mauryan Empire, which was established by Alexander the Great around 327 BCE. The Mauryan Empire was a powerful empire that extended from the Persian Gulf to the Indian Ocean.

The Mauryan Empire was succeeded by the Gupta Empire, which was established around 320 CE. The Gupta Empire was a prosperous and cultured period, during which the arts and sciences flourished.

The Gupta Empire was succeeded by the Islamic conquests, which began in the 8th century CE. The Islamic conquests brought about a period of cultural and intellectual stagnation, which lasted for several centuries.

3. Beliefs and Practices.—Hinduism is a polytheistic religion, which means that it recognizes multiple gods and goddesses. The most important gods and goddesses in Hinduism include Brahma, Vishnu, and Shiva.

Brahma is considered the creator of the universe, Vishnu is considered the preserver of the universe, and Shiva is considered the destroyer of the universe.

Hinduism is also characterized by its emphasis on dharma, or moral duty. Dharma is considered to be the foundation of all good and virtue.

Hinduism is also known for its complex system of caste, which is based on the idea of karma and rebirth. Caste is considered to be a fixed social order, which is based on birth and occupation.

4. Architecture.—Hinduism is also characterized by its magnificent architecture. The most famous examples of Hindu architecture include the temples of India, which are known for their intricate carvings and sculptures.

The most famous temple in India is the temple of Kailash, which is located in the town of Devagiri. The temple is considered to be one of the seven wonders of the world.

5. Literature.—Hinduism is also characterized by its rich and diverse literature. The most famous works of literature in Hinduism include the Bhagavad Gita, the Ramayana, and the Mahabharata.

The Bhagavad Gita is a religious poem that is considered to be one of the most important works of literature in Hinduism. The Ramayana is a epic poem that tells the story of Rama, a hero who is considered to be a representation of the god Vishnu.

The Mahabharata is a epic poem that tells the story of the Mahabharata war, which is considered to be one of the most significant events in Hindu history.

6. Conclusion.—Hinduism is a rich and complex religion that has played a significant role in the history and culture of India. It is characterized by its emphasis on dharma, its complex system of caste, and its magnificent architecture.

Hinduism is also characterized by its rich and diverse literature, which includes some of the most important works of literature in the world.

Hinduism is also important for its role in the development of the arts and sciences, which flourished during the Gupta Empire. Hinduism is also important for its role in the development of the caste system, which has played a significant role in the history of India.
HINDUISM

limita. Early traditions in W. India tell of fleets from the coasts of Sind and Gujarat conveying emigrants to Cambodia and Java, and Ptolemy's map of the Indo-Chinese names indicates, indicating the existence of Hindu settlements as early as the 1st cent. A.D. In Cambodia the remains at Angkor, Nakbon Wat, Borobudur, and other remains of Hindu origin are original. In Java, as in Sumatra, the early ascendency of the Hinduism by tradition is well connected with Buddhism, and then a period of aggressive Bakrism, followed by a period of apparent compromise between the rival faiths. Hinduism finally gave way to Islam, and has been with the original three (see E.B. ii. 229; E.B. xi. 286 f., 292, xxv. 74). But in Bali, or Little Java, it still holds its ground in a corrupt form, sanctioning the custom of widow-burning (suix) and the traditional fourfold Hindu caste system. It is now largely blended with the baser forms of Buddhism and the animistic cults of evil spirits (daka). For Hindu emigration to the Far East, see V. A. Smith, Hist. of Asia, in India and Ceylon, 1911, p. 256 f. In the early centuries of the Christian era, Hindu literature, and the literature of the Persian empire into Khotan, and all Chinese Turkestan up to the frontier of China Proper. The discussion of the influence of Hindu belief on the religions of the West is beyond the scope of this book. F. Petrie has discovered portraits at Memphis of an Aryan woman from the Panjâb and a seated Hindu figure.

3. Materials for the study of Hinduism.—The subject of Hinduism, in many of its varied phases, is considered in several articles in this work—those describing the great provinces of the Empire; those tracing the development of the faith as illustrated by the mummi five, etc.; those dealing with the greater gods, religious sects, and sacred places. The purpose of this article is to discuss, in a general way, the progressive evolution of Hinduism, and to group the facts, as far as is possible, in their historical setting. It must be remembered, however, that the materials for such a survey are in many directions incomplete and fragmentary. In the first place, the Hindu religious records are of much later date than those of Babylonia or Egypt. In Babylonia inscriptions from Kippar earlier than the third millennium before our era are available (Hdb v. 552; for various other estimates, see E.B. liii. 108 f.); the oldest Egyptian dynasty of which remains have been discovered goes back, according to Flinders Petrie, to 4777 B.C., or, in a later estimate, to 5510 (E.B. lix. 69). The accounts of the origin of Hinduism start with the Vedic age, which is believed to date from about 1500 B.C. Secondly, while the hymns of the Veda embody the naive speculations of the early Indo-Aryans on the character of the universe and the origin of the world, the later Brahmanic period were compiled by the priestly class to support its claims to the leadership of the Aryan community. A comparison of these writings with those of the Buddhists and

Jains, so far as they have been examined, leads to the conclusion that this Brâhmana literature does not accurately represent the early development of Hinduism (A. Davids, Buddhist Jâspas, 1908, p. 149 f.). The historical side, remains of this literature is vague and incomplete. These ancient religious teachers had little of the historical sense, and were not concerned to compile a systematic account of political events or of the phases of social progress. The inference which they desired to suggest was that Brahmanical Hinduism dates from the most ancient period; that Brahmanas have always been the political, religious, and social guides of the community; that the orderly progress of religious development was never inconsistent with violent cataclysm. The literature prepared by them contains no adequate account of the rise, progress, and decay of Buddhism and Jainism; and in a general measure it ignores the successive invasions of N. India by Greeks, Parthians, Scythians, and Huns, of which the two last races profoundly influenced the religious and social life of the Hindus. To this must be added the general insight and national patriotism which the Hindus share with other oriental races. The priestly record of the early Hindu period cannot, to any large extent, be supplemented from independent sources. The true historical period does not begin before the 7th cent. B.C., and there is little to show that the inhabitants of India, even the most intellectual races, seem to have been generally ignorant of the art of writing, and to have been obliged to transmit their memory for the transmission of knowledge (V. A. Smith, Early Hist. 7, Oxford, 1908, p. 34 f.).

No extant inscription can be assigned to a date earlier than that of Aśoka (p.c.), the middle of the 3rd cent. B.C., while numismatic evidence begins to be of value only from the time of the invasion of Alexander (16. 13 f.). The architectural remains of the earlier period which have survived are Buddhist or Jain, not Brahmanical; and the art and style are, for the most part, independent of religion. We possess no historical records and no sacred literature of the non-Aryan races of S. India, until they came into contact with the Hinduism of the North. The Tale of the Talism is said to date only from about 100 B.C. (V. Kankaabhai, The Talism: Eighteen Hundred Years Ago, 1904, p. 35 f.).

4. Vedic Arianism.—The Vedic religion will be discussed in a separate article. Here it is only necessary to point out that the methods employed by the school of mythologists represented in Great Britain by F. Max Muller, to reconstruct the divine personality from a single physical concept, such as the wind or dawn, are now generally discredited in the study of Indian literature. The study of Hellenic myths (Farnell, Cgs, Oxford, 1898-1909, v. 9 n.). The identification of the titles of the Vedic gods in language akin to the Skr. has been widely contested and found to be of a great measure unfruitful; and attention at present is more generally concentrated on the comparison of cults rather than of divine titles.

The priests and higher classes of the Indo-Aryan community, whose beliefs are represented in the Vedic hymns, had raised to the rank of gods the greater spirits which control the chief energies of Nature; but the lesser spirits, which were treated and propitiated by the mass of the people, were to a large extent ignored in the religious literature. The latter and lower form of Hinduism, though it has been denied that it formed 'anything like a complete background to Vedic mythology,' can be traced in the Veda (F. Max Muller, Contrib. to the Science of Mythology, 1897, p. 211).
HINDUISM

of omen, and other animals might be invoked; even objects fashioned by the hands of man, weapons, the war-cry, the drum, the plough, as well as ritual implements, such as the pruning-sickle, might be adored ('A. A. Macdonell, Vedic Mythology, pp. 3, 85, 147 f.).

Again, many myths (though an attempt has been made by Max Müller (op. cit. ii. 429, 553, 573) to derive them from physical happening) are of the type common to all primitive races. The tales of Indra overcome with drink, and committing adultery with Asura women; of the incest of Prajapati; of the creation of all things out of the severed limbs of a magnified non-natural man, Yuru, are all common to savage folk-lore, and in the various forms of races lower than the Aryans are. But the belief in the power of formula (mantra; see CHARMs and AMULETS (Indian)); the practice of sympathetic or mimetic magic, such as the use of figures which are wounded to destroy an enemy; magical practices connected with marriage, initiation, the anointing of the king; the use of homoeopathic magic for the cure of baldness or jaundice, are all similar to those current among the lower races of the world. In the case of the Brahmins, Die Religion des Veda, Berlin, 1894, pp. 508, 50, 477, 431 f., 507; M. Bloomfield, Athishva, SBE xlii. (1923) 7 f. Ideas of this kind are most largely found in the Atharvaveda, which was compiled from very ancient materials after the Aryans had penetrated some distance down the valley of the Ganges (Bloomfield, op. cit. Introd. xi, xiv). The fact that such beliefs were common to Aryans and non-Aryans naturally facilitated that contamination of the earlier and purer theology which developed into the Brahmanism, and at a later date into Hinduism.

5. Foreign Influence in Aryan culture and belief.

The view is now gaining ground that the Indo-Aryans were not unaffected by foreign influences.

(a) Some authorities recognize a stratum of Babylonian culture. If about 1400 B.C. the hegemony of Babylon had been established in Western Asia, it is not unreasonable to suppose that its influence may have extended to India. The great trade routes through Persia and Turkestan must have been controlled by the ruler of the Elamite-Tigris valley; ruins of terraced fields and irrigation channels in Baluchistan prove that in ancient times it must have been a very fertile land, through which communication between the Elamite-Tigris and Indus valleys could have been maintained. As early as at least as the 7th or 8th cent. B.C. sea commerce was carried on between the non-Aryans of S. and W. India and Babylon; and by this route the pre-Semitic alphabet, which is the basis of the Indian scripts, reached India (J. Kennedy, J.R.A.S., 1898, p. 241 f.; Smith, Early Hist., 22 n.; Sayce, Origin and Growth of Religion (II. 1887), London, 1891, p. 137 f.). Various lines of coincidence between the Babylonian and early Hindu culture have been traced: the resemblance of Babylonian chasms against diseases, evil spirits, the belief in the invisibility of those of the Athishva (M. Jastrow, Log. of Babylon and Assyry, Boston, 1888, p. 233 f.); the belief in sorcery, witchcraft, omens, lucky and unlucky days (ib. 204, 202 f., 280; Sayce, 130, 297); the custom at Taxila of selling maidens who failed to secure husbands, which was in force at Babylon (Herod. i. 198); the habit of burying in terra-cotta containers, found in India, resembling those of Babylonia (J. V. 235; Jastrow, 597 f.). It has also been suggested that India owes to Babylonian the introduction of brick masonry (JGI ii. 108), the adoption of the seven-days week, and of the system of the twenty-four or twenty-eight lunar mansions (nakatra) (M. Weber, Hist. of Indian Lit., 1878, p. 246 f.). On the other hand, Max Müller (India, What can it teach us?, 1885, p. 126 f.) strenuously denies that Babylonia shows traces of Babylonian influence, and M. Haug (Alt-assyri. Brahman., 1893, i. 49) suggests that the early astronomic observation identic with babylonian lunar mansions have been made in N. India. In any case, the lunar mansions were a late introduction in Babylonia, and, if the Hindus borrowed them, it was probably later than the 7th cent. B.C. (J. Kennedy, 291, 297 f.; further, F. K. Ginzal, Handb. der mathemat. und techn. Chronologie, Leipzig, 1906 ff., i. 74-77). A recent discussion of the influence of Babylon on the religion of Greece shows that so far as knowledge goes at present, there is no reason for believing that ancient Hellenism, wherever else across the streams that nourished its spiritual life, was fertilised by the deep springs of Babylonian religion or theosophy (J. R. Farnell, Greece and Babylon, Edinburgh, 1911, p. 307). Further investigation makes it clear that these conclusions apply to the relations of Babylonia with India. On the whole, the influence of Babylon on Hindu culture seems to have been comparatively late, and the results seen at Babylonia have been so thoroughly assimilated that they are no longer visible on Indian soil.

In the case of China, on the contrary, the primitive elements having become worn down or absorbed, it is difficult to trace the connexion between the two cultures. If the goddess Nana Devi worshipped at Hingha might be identical with the Babylonian Nana of Erech, we may suppose that the cults of the Mother-goddesses of east and west may here have been combined; her name, in the form Nana, appears on the cone of the Nana king Hys], who ascended the throne about A.D. 180 (J.R.A.S., 1907, p. 60; Smith, Early Hist., 255 f.; cf. J. G. Frazer, G.E., pt. i. The Magic Arts and the Rites of Kings, London, 1911, i. 37 n. T. Holdich, The Gates of India, do. 1910, p. 162 f.). An echo of the Sabel legend has been traced in the Brahmanas, where the demons pile up a great fire-altar, by which they hope to scale the sky; when they have climbed some distance, Indra pulls out a brick; they fall to earth, and all two, but who fly away and become the dogs of Yama, are turned into spiders (Bloomfield, SBE xlii. 500). The conception of the upper or heavenly sky appears in the Veda as well as in the Avesta and in the cosmogony of Babylonia. It has been urged that the coincidences between the Babylonian and the Hindu Flood-legend can hardly be accidental (Atarhazshas, xii. 36, 3; Satapatha Br. 2. 1. 6; Jastrow, 518). But the Hindu Flood-story is comparatively late, and it has been suggested that its independence of the legends in the Avesta and the Br. shows that it was not derived from Iran, but possibly, by Dravidian intermediaries, from Babylon, after the opening of communication by sea (J. Kennedy, J.R.A.S., 1898, p. 290 f.; also see T. K. Cheyne, in E.B. xii. vii. 976 f.; E.R. i. 1065 f.; F. H. Wood, SBE iv. 555 f.). It must also be remembered that such myths prevail in many parts of the world (T. E. Tylor, Social Inst. and Hist. of Mankind, London, 1865, p. 317 ff.), and that India has its own legends of the same kind, such as those prevalent among the Lepchas, Korkus, Mundas, Karsens, and Andamanese, which are almost certainly independent of Aryan tradition. The question of Babylonian influence on India has been discussed by (Korovin, Indo-Europ. Leipzig, 1894, Eng. tr. The Evolution of the Aryan, by A. Drucker, London, 1897),
HINDUISM 689

whose conclusions must be accepted with caution. For the wide-spread influence of Babylonian culture, see L. W. King, A Hist. of Sumer and Akkad, London, 1910, p. 377, the fact remains that the beliefs and cultus of the Hindus are, in the main, of indigenous origin, and that they developed on national lines of evolution. The Peninsula in east and west is bounded by an ocean, which in the early period was not open to the navies of the world. To the north and west India was cut off from the neighbouring Aryan kingdom by a rugged mountain barrier, a great river, wide tracts of desert, and a borderland held by savage tribes. This isolation of the country promoted that confiden
ces in, and respect for, their national religion and customs which are inherent in the Hindu mind. 'The Hindus,' said al-Biruni, 'believe that there is no country but theirs, no nation like theirs, no kings like theirs, no religion like theirs, no science like theirs' (India, tr. Sachau, London, 1888, i. 222). In short, the leading characteristics of Hinduism are the result of its environment. Its pessimism results from a depressing climate, where the population is successively exposed to malaria, tropical heat, and torrential rain. Hence, naturally, as was the case in Babylonia, the evil spirits which bring famine, disease, and other calamities are objects of propitiation, while those of a benign nature are often neglected. The molecular character of Hinduism is due to the isolation of race and culture in the population, the localization of its deities resulting from the worship of the guardian spirits of the isolated communities which formed their settlements in its jungles.

The Hindus are the direct division of the Indo-European family which has created a great national religion—Brahmanism—and a great world-religion—Buddhism; while all the rest, far from displaying originality, have adopted a foreign faith. . . . In spite of successive waves of invasion and conquest by Persians, Greeks, Scythians, Mahamadanes, the national development of the life and literature of the Hindu race remained practically unaltered and unmodif
ced from without down to the present day. No other branch of the Indo-European stock has experienced an isolated evolution like this. No other community of men can trace back its language and literature, its religious beliefs and rites, its domestic and social customs, to a period of un
terrupted development of more than three thousand years' (A. A. Macdonell, Hist. of S. Literature, London, 1906, p. 71).

The religious of the Vedantic period was a form of that higher Animism found among other savage and semi

savage races. It has been recently suggested that this type of Animism is not the oldest form of belief; in other words, that Animism, as we find it in ancient and modern India, does not account for what some recent authorities are disposed to regard as distinct phases in the religious consciousness—the belief in the spirit world and the recognition of a God. It is urged that Animism, in the sense in which it is recognized by E. B. Tyler and his school,

which concerns the human, the natural, the world of nature, ancestor-worship, and so on; that is, all that lies on this side of the cult. What lies behind it, the truly supernatural, cannot originate in Animism, and Animism does not explain it. The idea of God is derived from Nature worship, at the back of which lies Man; and it is not contradicted by the recognition of possible links between souls and gods, or between magic and prayer. The facts seem to point uniformly to decaying phases of monothetical belief—belief in a power to work, or to whose, evil of any sort is ins

The Greeks campaign of Alexander the Great was accompanied by the history, politics, or religion of India (Smith, Early Hist., 110). A pillar inscription recently discovered at Benag

car, near Bulus in the Gwalior State, records that it was set up in honour of Vindova or Vigna by Heliodorus, son of Dion, a devotee of Bhavagathas, who came from Taxila in the reign of Antikidas of the Greco-Bactrian dynasty (c. 150 B.C.). It is uncertain whether Vindova was an Indian god or identified him with Herakles or some other Greek deity; in other words, whether he was a Hinduized foreigner or had remained a Greek and was merely anxious to profess conformity with an Indian cult. In any case, it throws new and interesting light on the relations between Greece and India (Smith, Hist. of the Greco-Bactri

And, even if it be admitted that in certain regions and in certain departments of religion or art the influence of foreign races on India may be detected (see Smith, Early Hist., 277), the fact remains that the beliefs and cultus of the Hindus are, in the main, of indigenous origin, and that they developed on national lines of evolution. The Peninsula in east and west is bounded by an ocean, which in the early period was not open to the navies of the world. To the north and west India was cut off from the neighbouring Aryan kingdom by a rugged mountain barrier, a great river, wide tracts of desert, and a borderland held by savage tribes. The molecular character of Hinduism is due to the isolation of race and culture in the population, the localization of its deities resulting from the worship of the guardian spirits of the isolated communities which formed their settlements in its jungles.

The monothelism of the Svetambara Jains is exemplified in its [spelledsic] as the belief that the [spelledsic] of Indra still survives, but in an attenuated form (see art. BRAHMANISM, vol. ii. p. 804). Even in the Epic period he had suffered some loss of dignity, and he is now generally conceived as lord of a paradise of delights to which he conveys the souls of warriors slain in battle. In Buddhist mythology, under the name of Sakka, the Pāli form of the Vedic Sūtras, 'the mighty one,' he retains some measure of respect. In the older Buddhist Sūtras he is almost the only deity of a well-defined type; at a later period he is conceived as reigning in heaven of his own, whereas he occasionally descends to interfere in earthly affairs (H. Kern, Manual of Indian Buddhism, 1896, pp. 18, 23, 48; A. Ormskirk, Buddha. Art in India. Eng. Trans. New York, 1901, p. 197). The Buddhists of Nepal use the thunderbolt (vajra) of this god as the sacred symbol of their divine Master's victory over the king of the Hindu heavens, and they venerate it accordingly. All classes of Newars, Buddha as well as Hindus worship the sacred mountain, Meru, most closely associated with him. There he watches the dances of the nymphs who form his court—a view of his character which naturally commends itself to epic Hinduism. His cults extend even to the forest tribes, like the Bhils (p. e.), and in Bengal the non-Aryan Koch venerate a local god under the title of Indra, who is identified with Indra, and rides on his elephant, Airavata; and in Darjeeling it has suffered further degradation, seeming to be antinomious and represented by two figures, male and female, made of clay or cowdung. When drought is feared, the women make offerings of curds, parched rice, and molasses, and dance round the images at night, performing many obscene rites and abasing Indra in the foulest language, in the hope of compelling him to send the much-needed rain.' (Comer. Report Bengal, 1901, i. 190 ff.) In other places in the same province, after worship is done to him, his image is flung into the river as a mimetic rain-charm, and with the object of purifying the deity, and fitting him to answer the prayers of his worshippers during the coming year (W. Ward, The Hinduos, 1817, i. 32).

(c) Agni.—A Indra was the special god of the warriors, so Agni was closely connected with the Brāhmans; and this devotion, with the intensified belief in the efficacy of the sacrifice, was fully developed in the Brāhmans. This deity seems to have developed from the cult of the sacrificial fire; but his personification, like that of the Greek Hestia, was never sufficiently anthropomorphic to disguise its ritualistic origin (Farnell, GES v. 388). Some Brāhmans, known as
HINDUISM

Agni, still, in accordance with the sacred law (Mans, li. 67, xi. 68), maintain the sacred fire, which is produced by means of friction with the fire-stick (aruni). The sacred fire is also kept up at the temple as a sign of the sacred fire. In Nepal, the gom rite is performed by the priest himself in the jets of combustible gas which rise out of the earth near her shrine. Fire is also venerated as the agency by which the sacrifice of the sages reaches the gods; in the form of the koma it is an important part of the ordinary domestic ritual (see art. BRAHMANISM, vol. ii. p. 383 f.).

(c) Sun-worship.—At the present day, worship is performed in honour of Sūrya Nārāyaṇa, the Sūrya of the Vedic period, also known under the titles of Ṛṣiṣya and Sūriṣya (see ERS ii. 304 f.). All pious Hindus reverence the rising sun, and he is invoked when the pilgrim bides in sacred rivers, and at other devotional rites. But, like the Greek Helios, he is now regarded as a minor god rather than a great divinity, the most probable explanation of his loss of dignity being that his functions have been transferred to the greater Divinities. As Farnell (COS v. 420) remarks: "Earth, "hearth," "sun" were names of palpable objects, regarded indeed with some sense of mystery that is the emotional background of religion, which is capable of being transformed by the healthy materialistic perception, and in any case too limited in respect of local position, function, to satisfy the true Hellenic idea of godhead. The sun being a visible god whose beneficence is obvious to all the Hindu conceives that he has little need of image, and, though some temples, like those of the Kṛṣṇa at Oraiṣa, Gāyā in Bengal, and Ayodhya in the United Provinces, are dedicated to him, they are far less numerous than those of the sectarian gods; and his worship as a tribal deity is confined to tribes like the Kāśi of W. India, who are probably a branch of the Gūjaras, and comparatively late immigrants from Central Asia (J. Kennedy, J.E.S., 1907, p. 987). The Saur sect, which was specially devoted to this form of worship, seems to have practically disappeared (H. H. Wilson, J.A.S., 1901). The cult of the deity which prevails among the non-Aryan tribes is probably not based on imitation of the practices of the Aryans.

(a) Fasting. Vedic deities.—This list of four gods—Varuṇa, Indra, Agni, and Sūrya—practically exhaust those cults of the Vedic gods which survive in modern times. Of the four gods, Uṣas, the dawn, the twin Ṛṣis, Vāyu-vāta, and the Maruṇa, Pūjan, deity of roads and cattle, hardly even the names survive. Their places have been taken by a host of minor deities of tribe or village, or their cults have been appropriated by the sectarian gods. The cults of stars and sacred animals, mountains, rivers, and the like, which appear in the Veda, have now assumed forms presenting only a faint analogy to the primitive tradition. One cult, well established in Vedic times, that of the Pitṛ, or painted dead, continues perhaps more than any other to impress the imagination of the modern Hindus (see Ancestor-worship (Indian), vol. i. p. 450 f.).

(b) Hinduism to Brahmanism.—The leading note of the Vedic hymns is cheerfulness: the great gods are the benevolent patrons of their worshippers; they teach the Indian Arya in all his struggles with the Drāvyas, or dark indigenous races; the evils which assail men are the work of demons, against whom the kindly gods wage successful warfare. In the period which follows, that of the Brāhmaṇas (c. 800-500 B.C.), the prevailing feeling is very different. Its principal is perhaps due to climatic environment, and to the general acceptance of the doctrine of metempsychosis. The atmosphere of this period is that of religiosity rather than religion—the quibbles and elaborate ceremonialism of professional priests, contrasted with the peaceful poetry and naive speculations of the Vedic Devis—suggests the idea of things Divine and human. It may be compared with the transition from the prophetic literature of the Hebrews to legalism, and its crystallization in the later Phralism. This change of feeling may be attributed partly to climatic, partly to political, conditions. The Indo-Aryans had by this time advanced southward down the Ganges valley, where the climate is damper and more depressing than that of the Panjāb. They had apparently broken up into a number of petty States which waged warfare one against the other. They had also come into contact with the non-Aryans, by some called Dravidians, and more probably members of the Kāla-Khatri family, who, according to recent investigations, do not seem to have entered the Panjāb in any considerable number. Against these Mon-Khmer or Dravidian tribes, known as the "dwellers in the land," they waged constant war. The clash of these rival cultures formed the sources from which modern Hinduism ultimately sprang.

It is a popular error which mistake all conclusions regarding the early history of the Hindus, to suppose that these indigeneous tribes were all savage barbarians. Many of them were probably forest-dwelling tribes, like the Gonds or Munda, or nomadic horsemen, like the modern Bodīyas or Sākatas. Collectively they were known to the Indo-Aryans as "those who do not maintain the sacred fire" (anagnirata), or "fire-eaters" (jātayudham). Some of them seem to have attained a fairly high level of culture, even possessing, as the jealous Vedic singers admit, fame and credit, and possessing a rude form of husbandry (Muir, Orig. Skr. Texts, ii. 368 f., 399). Their religion, like that of their modern successors, was a form of Animism, and they had reached the belief in the existence of the soul after death. They "adorn," says an early text, "the bodies of their dead with gifts, with various kinds of ornaments in thinking that thereby they shall attain the world to come" (Muir, ii. 368). In short, it seems probable that in material belief, as well as in religious belief, they were not far below the standard of the mass of the Indo-Aryans. The importance of this consideration lies in the fact that this uniformity of the Dravidian religion is combined with this union of these two rival stocks, and led to that amalgamation of the cults of the conqueror and the conquered from which modern Hinduism was evolved.

10. Contributions to modern Hinduism from the Brāhmaṇa period.—The chief contributions from this period to Hinduism were: (a) a great system of religious philosophy known as the Vedāṇa; (b) the supremacy of the Brāhmaṇa; (c) the dogma of the efficacity of sacrifice; and (d) the doctrine of metempsychosis.

(a) Vedāṇa polemics, "which is breathed by every Hindu from his earliest youth, and pervades in various forms the prayer even of the idolater, the speculations of the philosopher, and the "verbs of the beggar" (Max Müller, India, What can it teach us?, 249), and which has been traced in a hymn of the Rigveda (x. 90), is fully developed in the philosophical literature known as the Upaniṣadas. It forms the subject of a special article (see Vedāṇa, and E.R.S. i. 47 f., 167 f.). Its chief interest at the present time lies...
HINDUISM

in the fact that its revival is one of the most important movements in the Neo-Hinduism of our day (see § 25).

(b) The supremacy of the Brāhmaṇa.—The priest, who in his most primitive form, is an exorcist or medicine-man, appears in Vedic times; but the priestly order does not seem at that period to have been organized into a profession, nor did its members claim a hold by hereditary right, though the transmission of magical powers from one generation to another may have been recognized. The home of the rite of the early Aryans, conducted by the head of the family, gave way to the in- 
terlacings of ritual, and thus led to the creation of the office of purāṇika (proprietor, ‘he that is set before’), or family priest, whose claim to office mainly rested on his skill in magic (Bloomfield, SBE xlii.; Introd. livii ff.). Hang, however, is inclined to date this office back to the period when Iranian and Hindu formed a single community (l. 67); and it seems clear that the hereditary magical power of the priestly class was re- 
cognized even before Vedic times (see ERE II. 435). The supremacy of the Brāhmaṇas was doubtless closely connected with the denial by the Indo-Aryans to the Daṣya of the right of possession, which was one of the causes which contributed to the establishment of the caste system (Thrae Davida, H.L. 1881, p. 23 ff.). But it is not till the Brāhmaṇa period that Brāhmaṇa claims are fully developed. ‘The gods,’ says the Aitareya Brāhmaṇa (Hang, ii. 528 ff.), ‘do not eat the food offered by a king who has no house priest.’ There are two kinds of gods: the Dvaras and the Brāhmaṇas, the latter being ‘deities among men.’ At a later time Mann (xl. 85) lays down that ‘by his origin alone a Brāhmaṇa is a deity even for the common man; his teaching is авторi- tative for men, because the Veda is the foundation for that’; and, again (l. 317), ‘a Brāhmaṇa, be he ignorant or learned, is a great divinity, just as the siva, whether carried forth or not carried forth, is a great divinity.’ The Brāhmaṇa of the present day lays claim to the rights accorded to him in the early sacred books; and some of them, like the Nāgaras of Gujarāt and the Nambūṭiras of Malabar, surround themselves with rigid tabus of various kinds in order to enhance their personal purity (A. K. Forbes, Rta Māta, London, 1878, p. 504; J. A. Dubs, Hindu Manners*, 1906, p. 178 ff.; F. Fawcett, Bull. Madr. Soc. 33, 1887, pp. 108 ff.; L. K. Ananthārā Krishnā Iyer, Cōtiṅs Trāda and Cōtale, [1912] 100 ff.). Owing to its isolation and to the special environment of Orissa, the local Brāhmaṇas, with their metropolis at Jaipur, possess more power and property than in almost any part of India (W. Hunter, Orissa, London, 1875, l. 255 ff.; E. Hinthop, Survey General Prov., pt. v. [Allahabad, 1911] p. 29). But in the case of some of the southern Brāhmaṇas this affectation of ex- 
treme personal purity is not deemed incompatible with the strange marriage law under which some of them, like the Nambūṭiras, live in a recognized system of concentricity with women of the Nāgar caste.

The position of the Brāhmaṇa in S. India in relation to popular belief is specially interesting, as the respect paid to him depends partly on race, partly on history, and partly on environment. Thus, in the great delta of Tanjore in the E. part of the province,

Brāhmaṇa influence is predominant in social and religious matters. In almost all non-Brāhmaṇe castes the services of a Brāhmaṇa priest (family priest) are indispensable at weddings, funerals, and sacrifices; and the rites observed on these occasions are tinged with Brāhmaṇical observance to an extraordinary extent. As a result the Brāhmaṇas in Brāhmaṇism is here a living reality, and not the neglected cult, shrouded out by the worship of aboriginal godlings, demons

and devils, which is so often in other districts. Almost every village has its temple dedicated to one of the orthodox gods, holy places are legion, and every important town possesses a madrasah (university) building, but the Brāhmaṇa priestess of good fortune or ritual. Brāhmaṇas versed in the sacred law are numerous in Tanjore; Vedas sacrifices are performed on the banks of the river Kaveri; and Vedic chant is performed in a manner rarely equalled; philosophical treatises are published in Brāhmaṇical books, and religious associations exist, the privileges of initiation into which are eagerly sought for, and the rules of which are followed earnestly, even to the extent of relinquishing the world (W. F. Hemingway, Gazetteer of Tanjore, Madras, 1906, l. 67 f.). The explanation of this predominance of Brāhmaṇical life probably lies in the influence of the great Chola kings, to whose religious fervour the three temple numbers in the district (Smith, Early Hist. 4, 414 ff.)

In the adjoining District of Madura, however, the situation is different. Though Madura is a well-known centre of Brāhmaṇical, the religious sentiment of the people is Dravidian. The important temple-worship of the chief city creates the impression that the people must be devoted to the worship of the orthodox gods; but a closer examination shows that large areas are devoid of any important shrine dedicated to the members of the Brāhmaṇical pantheon, and the village people are known to have been unable to impose their rites to any great extent upon the people is that large sections of the community do not regard it as necessary that their marriage or funeral should be performed by any professional priest (W. Francis, Gazetteer of Madura, Madras, 1906, l. 84).

Passing to the northern Districts of the Presidency, in Ballyh on the N. slope of the Deccan plateau,

the religious worship of the people is devoted to the shrines of the local Hāmana (the local teaching) which are in several hundreds. The former abode, and there is a saying that there is no village without a hāman or a hāman temple. The village goddesses are many. Besides the usual Mahāma and Dur- 
ganama (of whom the former presides over small potters, while the latter is malignant), the water goddesses Gāndāma or Gānma, and the numerous unnamed Gānnas, or village mothers, there are several local Annas (brothers) held in great respect . . . Brāhmaṇi is worshipped in the form of four-handed images, some- 
times without any tangible image, a sort well and one of the pillars in a temple being declared to be his habitation and any professional priest (W. Francis, Gazetteer of Bellary, Madras, 1906, l. 86).

In the Godāvā district on the east coast, partially composed of a deltaic region, with tracts of hill country occupied by wild tribes,

coalitions and alliances are maintained by the various castes, and these alliances are celebrated by marriage, personal friendship, or ceremonial processions; and it is not unusual to see the more influential castes of Brāhmaṇa and the Brāhmaṇas of Northern India as degenerate, the one are the ‘fish-eaters.’ They again believe that all other Brāhmaṇas, like those of Northern India, are unable to pronounce Sanskrit speech correctly. On account of their peculiar environment, the Brāhmaṇas of S. India are, in contrast to the Brāhmaṇas of the rest of India, and they are able to carry on their religious and social duties, and to maintain their position, and it is a rule that the Brāhmaṇas are far from popular, irrespective of the fact that they are the most conspicuous of the castes, and that there are still a power, but their power is extremely limited. All the power they have is that of advice. They can tell the
HINDUISM 693

is proper and what is improper. They can tell which actions and thoughts are inconsistent with scriptural sanction, and which have not, but they cannot compel any other men to do anything. They again have a power of conferring Vedic or Puranic sacraments, as they are priests, and of bestowing on, the possessors with the power, and the good use to which this power can be applied, are those who consecrate them to this purpose, with the

The Brāhmaṇas of N. India, doubtless as the result of a long period of foreign domination, are much less pretentious and exacting. The laxity of practices among those of Kāmir and Rājputana is notorious; and, though the Kanaṣṇiṣṇas exercise extreme care in the matter of food, on the whole the priestly class, particularly in regions, subject by manlier races like the Jat or Rājputs, have lost much of the influence which they once possessed (J. Wilson, Indicæ Caste, Bombay, 1877, p. 139, 146, 148, 160; Thibetan, Puranic Ethnography, 1883, p. 120). Many of them, like the Gaṇapati of Gāyā, the Prayagwāl of Allahābad, the Chaubē of Mathurā, all of whom are pilgrims guides at these sacred spots and shrines, are but extensively learned. Among the ordinary village Brāhmaṇas the theory of vicarious sacrifice has been so far extended that maidens are sometimes offered, and others propitiated, by feeding at funeral and other feasts, and performed, no priestly duties. The Brāhmaṇa escurtist and astrologer still maintains much of his influence even among these classes which pretend to have assimilated the learning of the West, and particularly among women, who are specially devoted to the traditions domestic. (The efficacy of sacrifice. With the supremacy of the Brāhmaṇas was combined the dogma of the efficacy of sacrifice. “By sacrifice,” says the Vedic Brāhmaṇa, “the gods obtained heaven” (Monier-Williams, Brāhmaṇism and Hinduism, p. 23). According to other Vedas, should sacrifice cease for an instant to be offered, the gods would cease to send the rain, to bring boughs at the appointed time the sun and moon, to ripen the harvest, because they would no longer incline to do so, and also, as it is sometimes surmised, because they could no longer do so (Barth, Rel. of India, 1882, p. 86). There is not much evidence to support the belief that the Indo-Aryan sacrifices depended on the condition of life through the eating of the totem animal—a view advocated in the Semitic sphere by W. R. Smith (Rel. Sem. 238 ff.) and further extended by F. B. Jevons (Introduction to History of Eth., London, 1886, p. 18, ff.). There is little trace of totemism in Vedic literature, and we find little proof that the Vedics Indians believed that the eating of the god, or of the conception of the Semitic sacrificial meal (Macdonell, Vedic Myth., 183; A. B. Keith, J.R.I., 1907, pp. 931, 939). It is also improbable that sacrifice in all its complicated details could have been developed from one only of a group of kindred ideas included in the general system of primitive worship. In India it would appear that the first aim of sacrifice was to present a simple thank-offering. The second aim was to nourish the gods with the essence of the offered food, and to strengthen them for their duty of maintaining the universe. The next idea was that of making these offerings the occasion of reaping from the invigilates and gratified deities, and so accomplishing some specific earthly object, such, for example, as the birth of a son. A still more ambitious object was that of employing sacrifice as an instrument for the human beings of the world gods and even exalting to heaven (Monier-Williams, p. 23).

It gradually became a mystic rite, which of late gave supernatural power to the worshipper apart from the god; or it was since the time of the mimetic, the offering imitating the action which he desired the god to perform; or it was intended to propitiate spirits or tutelary gods. It gradually became surrounded with that air of mystery which Hindu thought associates with it, and it was often made to seem trivial, that making a symbol of symbols which at bottom signify nothing, and of playing with enigmas which are availed of with the trouble of trying to unravel (Barth, 209).

The great Vedic sacrifices, at which thousands of victims were immolated by hosts of priests—the rite lasting, it is said, in some cases three generations—have quite fallen into disuse; and the number of Brāhmaṇas fully skilled in the elaborate ritual is now small. Human sacrifices, rare in Vedic times, and possibly adopted from the non-Aryan races, increased at a later period; and, though the merit of sacrifice of the Kandus (yev.) has long been suppressed, isolated examples of such practices are still occasionally reported (H. H. Wilson, Works, ii. 288 ff.; W. Crooke, Things Indian, London, 1896, p. 288 ff.; Rajendrala Mitra, Ind. Aryans, London and Calcutta, 1881, i. 111 f.). At the present day sacrifices are of two kinds—bloody and bloodless offerings. The former are usually made to the Matha gods in one of their many forms, especially in Benares and Mathurā, and among the lower classes of the people rather than among the higher. Their object is to avert the anger of the goddesses, to propitiate the evil spirits, or to remove disease or other calamity, or they are made in fulfillment of a vow. Sometimes a compromise is made, the animal being merely laid before the shrine, or its ear is pierced and its blood presented, after which it is released. Bloodless offerings consist of the fire-sacrifice (homa), in which butter is cast into the flame so that the sweet savour may reach the gods, or presentations are made of grain, fruit, flowers, or leaves of some sacred tree or plant, which are laid before, or laid upon, the image, and are sometimes accompanied by a water oblation. Siva, except very rarely in the case of his Himalayan manifestation Pāṇḍu, which was probably adopted from some non-Aryan cult, receives none but bloodless offerings; and this, is, of course, the rule in the worship of Viṣṇu, the humanitarian Buddhist tradition being clearly traceable in his cult. The intention of the modern worshipper is to propitiate the god; ‘man needs things which the god possesses, such as rain, light, warmth, health, while the god is hungry and seeks offerings from the earth there giving and receiving on both sides’ (Barth, 85 ff.).

Metempsychosis, palingenesis. —The most important dogma which was admitted into the official creed during the Brāhmaṇa period was that of the transmigration of the soul. It is not found in the Veda, which inculcates a belief in immortality, and that of the dying soul, or of the conception of the Semitic sacrificial meal (Macdonell, Vedic Myth., 183; A. B. Keith, J.R.I., 1907, pp. 931, 939). It is also improbable that sacrifice in all its complicated details could have been developed from one only of a group of kindred ideas included in the general system of primitive worship. In India it would appear that...
HINDUISM

49 f. When it was taken over by Buddhism, Gautama did not teach the doctrine of the transmigration of souls, for which there is no place in his system, but the transmigration of character; and he held that "after the death of any being, whether human or not, there survived nothing at all but that being's karmas, the result, that is, of its mental and bodily actions... not a single instance has been found in the older parts of the Pali Piṭaka of man being born as an animal" (Rhyia Davids, H.L. 92; cf. Waddell, Buddhism of Tibet, London, 1896, p. 100 ff.). It is particularly prominent in the Buddhist Jātakas, or birth-stories, in which the "law of description" by which the character of the becoming occurred in a previous birth. Closely connected with this doctrine is that of abhinna, the respect for animal life, which was accepted by Buddhism, more fully developed by Jainism, and is now observed by the Vaishnava sectarians, who owe the inspiration largely to Buddhism. In opposition to Baraś (p. 97), Hopkins (Rel. of India, 190 f.) denies that "aversion to beast-sacrifice is due to the doctrine of karmas, and rebirth in animal form. The karmas notion begins to appear in the Brahmanas, but not in the earliest shape of transmigression. It was surely not because the Hindu was afraid of eating his deceased grandmother that he first abstained from meat. For, long after the doctrine of charms and amulets is established, animal sacrifices are not only permitted but enjoined; and the epic characters shoot deer and even eat cows."

At the present day the dogma is widely accepted. In N. India most Hindus believe that wrong-doing is displeasing to Paramēśvara, the great god, and that this must suffer for his acts, possibly in the present existence, but certainly in his future life or lives. It is, however, doubtful whether the future penalty is in any way connected with the sinner in the present life, because the operation of the law of karmas is regarded as so certain that the specific condemnation by Paramēśvara in each case is seldom required (Ceremonial of the Nails, 1901, l. 76). The same writer remarks that a fundamental difference in the way of the spread of Christianity results from a belief in transmigratio, which is in direct conflict with the belief in a Divine atonement. H. A. Rose, again (Ceremonial of the Nails, 1901, l. 161 f.), quotes, as a development of the Brahmanical atonement, the belief that certain classes and castes possess powers of causing evil or curing disease which are believed to be supernatural and to pass from one generation to another. These powers are independent of worldly status, and a person who possesses them retains them even when he purifies a menial occupation, provided it be not so disgraceful as to involve ostracism by his brethren. This, however, is the recognition of the influence of heredity rather than of direct transmigration. Several birth customs in the Ārya—burial of infants near the house door; offering of milk after the death of a child; the belief that if jackals or dogs disinter the corpse and drag it towards the house or village, the child will return to its mother; the preservation of the clothing of dead infants—illustrate the same belief (Ceremonial of the Nails, 1901, l. 99). On the basis of a所说的, see A. Bertholet, The Transmigration of Souls, London, 1909.

41. The anti-Brahmanical reaction.—While during the period represented by the Brāhmaṇa literature, the priestly body was engaged in elaborating the cultus, and the philosophers were engaged in the nature and destiny of the soul, the mass of the people was little affected by ritual or speculation, and the time was ripe for change. Hence arose both Buddhism and Jainism, both contemporaneous movements, due to the reaction against the Brahmanic monopoly of admission to the ascetic orders (see Hoernle, JAS, 1886, p. 39 ff.).

'Then Buddhism arose, the accepted and general belief was that the souls of men had previously existed within the bodies of other men, or gods, or animals, or had animated material objects; and that when they left the bodies they would enter upon a new life, of a like temporary nature, under one or other of these various individual forms—the particular form being determined by the goodness or evil of the acts done in the previous existence. Life, therefore, was seen to be a never-ending chain, a never-ending struggle. For however high the conditions to which a soul had attained, it was liable, by an act of wickedness, or even of carelessness, to fall again into one or other of the miserable states. There was a hopelessness about this creed in direct contrast to the child-like fulness of hope, the strong desire for life, that is so clearly revealed in the Vedas' (Rhyia Davids, H.L. 97). It was this and distinguishing characteristic of Buddhism that it swept away the whole of the animistic soul theory, 'which had hitherto dominated the minds of the superstitions and the thoughtful alike. For the first time in the history of the world it proclaimed a salvation which each man could gain for himself. In this world, during this life, without the least reference to God, or to gods, either great or small' (ib. 39).

The main distinction between Jainism and Buddhism lay in the fact that the former specialised and intensified the earlier ascetic discipline, and prescribed reverence for life, not only man, but inanimate animals, plants, fire, earth, water, and wind; while Buddhism advocated asceticism in a milder form, and its extinction for its members in knowledge and right living. It has often been suggested that this movement was part of a widespread religious and social revival.

The sixth century B.C. is one of those epochs in the history of our race which mark a widespread ascetic movement. In the case of the Hebrews it is still a moot question how far some fresh impact from Egypt or from further east had to do with this. But a sort of pantheistic and ritualistic religion, beginning from many centres, of which the names of Egypt, Hittites, Phœnicians, and the mythical Orphic may serve to remind us, had set going a wave of simple rejection, of religious striving, which was threatened to destroy mythology, at another to transmute it into novel forms. Waste ethics until then were used in various ways. Individuals were not satisfied with the tenets of Hellenic or Egyptian or Brahmanic religious and prophetic literature, starting in the 8th century, continued during this period (HDB iv. 119). In the Tigris-Elatharases valley, Nineveh from 907 B.C. Babylon was conquered by Cyrus in 539 B.C.; the life of Buddha may approximately be fixed between 507 and 487 B.C. (see EEE ii. 881). As in the case of the Harōe Jam in Eul, the spread of political and religious unrest and movement, promoted individualistic tendencies in this new grouping of peoples. It is at present, however, impossible to trace any real connexion between these almost contemporaneous and historical and literary events, or to find any evidence of the communication of the ideas underlying Buddhism from the east to the west, except that they were all the result of a long series of previous movements; and these previous movements were, in fact, so similar that they ran on nearly parallel lines on the common basis of animistic conceptions. And similar causes acting in these parallel lines took about, though by no means exactly, the same time to produce corresponding results (Rhyia Davids, H.L. 97).

42. The relations of Buddhism to the rival religions.—Buddhism and Jainism, as we have seen, were the result of an age of outburst of contemporaneous movements, organized outside the Holy Land of the Brāhmaṇas, by Kaśyapa, in
opposition to Brahman claims. But, in spite of these initial antagonisms, during the early period the three rival faiths seem to have existed side by side in comparative harmony. The lay members of the Buddhist and Jain orders, while they looked to their own teachers, retained the services of their Brahman priests for the performance of domestic rites. Buddhism has also completely disappeared from the Indian northern plains that it is impossible from modern facts to illustrate the conditions which prevailed at the period of its origin and vigour.

Even to the present day the heterodox Buddhists of Nepal combine the worship of Siva with that of Buddha, and employ Brahman in sacred and domestic rites (Oxenford, H. 147). The same fusion between Buddhism and Brahmanism, especially in the cult of Siva, prevails in Ceylon, and was recognized under the late Buddhist dynasty at Manisetra (R. H. Oldfield, Eastern Monomark, London, 1860, p. 206 f.; Shewky Yose (J. G. Scott, The Burmese, 1832, p. 178; B. J. Yule, Modern Ceylon, 1866, London, 1866, p. 50 f.). In continental India the same conditions prevail in the case of Jainism. Jainas, at least at present freely worship the Hindu gods that are connected with the legends of their saints. In Bombay, Major J. K. Wright, a Brahman, worship Siva and Saktis as Saktis; and observes Hindu festivals and holidays; some even worship the Saktis, or Mother-goddesses (Goyen, Burma, 1857). In 1816 and 1820, p. 487; 1821, p. 405 (1901) p. 131; xliii (1846) 105, xlviii (1840) 185; Wilson, N. India, 1828, p. 173; see, too, the accounts of the Viya or merchant caste freely intermarry; and, when a woman of this caste is married to a Jain family, she no longer sees the Jain rites, while she is at her husband's house, and worships the old Brahmanical gods when she visits her parents—a condition of things which is very common in other parts of the country (Custom Report Burma, 1903, p. 409; R.G. In (1801) p. 131). The same is the case in the Provinces of Bombay, Calcutta, and Madras (I. C. M., 1875). vi. 81). In India, too, when a Sakti will not eat food not intermarried with a Jain, she is treated with the same hostility by the Brahman as here. Indeed, in the Central Provinces, too, they are not allowed to sport, or to use the public wells, or to use the public latrines (Government of Bombay, 1858, l. 67). The Jains, in fact, which divide Jains from Hindus can with difficulty be traced; and there are other sects, admitting Hinduism, which press greater divergence from orthodox Brahmanism.

The evidence of the Chinese pilgrims and that derived from the present day proves that the same tolerance of the rival faiths prevailed during the greater part of the period when Buddhism was in the ascendant, and even when it began to show symptoms of decay. The decay of Buddhism, which was due to internal weakness and the competition of the revived Brahmanism, seems to have set in about A.D. 700; and, while it is still held its ground in remote parts of the land, its final disappearance was due to the Muslim occupation of N. India. Buddhism in its early form was probably simple, and was thus ill adapted to supply the religious needs of a race which has always found a sensuous type of worship more attractive. It demanded from its followers a standard of morals which was in advance of their stage of culture. It involved the discontinuance of sacrifice, and of the myriad ritualistic devices by which man has ever tried to win the favour, or avert the hostility, of his gods. It abolished the personality of Brahma, into whom most orthodox Hindus hope eventually to be absorbed, and it substituted the vague conception of Nirvāṇa, which meant to Buddha the extinction of lust, anger, and ignorance; to the Jains and some Buddhists eternal bliss; to the Magadhas, their proclamation of the date of Buddhist extinction and annihilation (Hopkins, 321; Rhys Davids, H.L., 283).

The State in India has always been tolerant of every form of religion (see A. Lyall, Fortnightly Review, Nov. 1906, p. 717 f.) and this rule was followed by the great Buddhist Emperor Aoka (c. 150). Though it may be true that the gradual decay of Buddhism in the Indian plains was due to causes other than persecution, it is also certain that fanatic rulers from time to time indulged in savage outbreaks of cruelty, and that both Jains and Buddhists were victims of outrage.

"That such outbreaks of wrath should have occurred is not wonderful, if we consider the extreme oppressiveness of the Jain and Buddhist prohibitions when ruthlessly enforced, as they were by some Bhāja, and probably by Aoka. The wonder rather is that persecutions were so rare, and that as a rule the various sects managed to live together in harmony, and with the enjoyment of fairly impartial official favour" (Smith, Early Hist., ii. 191; for a somewhat different view, Buddhist India, 219).

13. The continuity of Brahmanism and the rise of Hinduism.—Thus Brahmanism, even during the ascendancy of Buddhism, never suffered complete extinction, though it undoubtedly lost much of its dignity and importance when Buddhism in N. India and Jainism in the S. and W. enjoyed the patronage of ruling powers and were elevated to the rank of State religions. The extension of Indo-Aryan colonization, the continuous absorption of the non-Aryan tribes, and, finally, the establishment of the great Maurya Empire under Aoka (272—232 B.C.), which ruled the greater part of the Peninsula, led to a modification of the earlier forms of Hindu belief. The Hindu has always been accustomed to localize his gods, and probably from the earliest times the tutelary village-gods received more veneration from the masses of the population than the deities of a higher class whose cultus was the monopoly of the priestly body. This was the case with the Roman colonists under the Empire.

"The conditions of health and diseases are so obscure, the influences of will and imagination on our bodily states are so marked, that, in all ages, the boundaries between the natural and the unknown are blurred. . . . On hundreds of provincial inscriptions we can read the inscriptions and the Hindu self-sacrifice and purification in the Ekatan, the sacrifice by the Brahman to appease the gods of desert or forest, the dangers of march and battle, stimulated his devotion. If he do not know the name of the strange deities, he still invoke them collectively and perhaps the gods whom he has been taught to venerate" (S. Dill, Romes Society from Zero to Marcus Aurelius, London, 1904, pp. 440, 450; and see art. BRAHINDIA).

It was from this combination of Aryan and non-Aryan cults and beliefs that the Neo-Brahmanism took its rise.

14. The Scriptures of the Neo-Brahmanism.—The literature of the new form of Brahmanism is all the work of, or inspired by, the Brahman hierarchy. The theory which it suggests is that there was no violent break between the older and the newer faith. Hence it is difficult to trace the stages of the evolution by which the theology was reconstructed.

(a) The Purāṇas.—This difficulty has been increased by a long-standing error regarding the date of that body of literature known as the Purāṇas. To the Hindu mind their name—Archeologia,' the ancient writings,' suggests immemorial antiquity. It has been the boast of the best known of them, the Vāyu Purāṇa, about A.D. 1045 (H. H. Wilson, Vāyu Purāṇa, London, 1840, Intro. xxii). It has, however, recently been proved that this and other important works of the same series must be dated about A.D. 500, while the Vāyu Purāṇa is referred to the 4th cent., and all the principal works, which in their present form are recensions of a much older body of literature, were re-edited in the Gupta period (A.D. 300—500), when the study of Sanskrit was revived (Smith, Early Hist., i. 151; MacCrate, St. L., 298). From this conclusion the important result follows that the growth of the Neo-Brahmanism was contemporaneous with the decay of Buddhism in N. India, and its development naturally progressed side by side with that of the later Buddhism and Jainism.

(b) The Law literature.—The second body of literature connected with this religious revival is that of the Law-books. These, like the Purāṇas, are the result of various recensions. The two most important, the Vaiśeṣika-Dharmakāra and the Māṇu Dharma-Dharmakāra, probably assumed their present form about A.D. 200; and the latter is closely connected with the Mahābhārata, contain-
ING MANY VERSES QUOTED FROM THAT EPIC (Bühler, "Myst. Mess." II, 232; Macdonell, f. Law., 432). But, according to Bühler, the Law-book did not borrow from the Epic; both authors used the same materials; and those materials were not systematic treatises on law and philosophy, but the floating proverbial wisdom of the philosophical and legal schools, which already existed in metrical form in the Epic's treatises, which has become for modern Hindus the text-book in matters connected with religion and social observances, represents the period before the recognition of the sectarian gods in the schools where it originated. It nowhere teaches the performance of rites other than Vedic; it nowhere imitates the worship of any of the deities of the Sanskrit Epic school; nor is there any hint that it was intended to form a digest of the sacred Law. It rather bears unmistakable marks of being a school book, intended for the instruction of all Aryans (Bühler, SBE xxv., Introd.) It contains no allusion to the post-Vedic Trimurti, the triad consisting of Brahma, Vishnu, and Siva, the last two gods being only once mentioned by name (xii. 121); and it ignores the cultus of the Sakta (female powers), and the efficacy of fervent faith in Kṛṣṇa (see art. BHAKTI-MĀRGĀ, vol. ii. p. 329 ff.). The great god is Prasādt, lord of created beings; the highest and by inclusion all objects are objects of reverence, and he is the fate of those who insult or injure them (ix. 316, iv. 165). A Brahman who serves his teacher until death enters forthwith the eternal mansions of Brahma. Image-worship is casually observed, but temple priests are spoken of with a measure of contempt (ll. 26, 180). The idea of transmigration is clearly stated, and, as a consequence of this, various halls described, though places of terrible torture, resolve themselves merely into places of torment. While the heavens bear only steps on the road to union with Brahma. The dignified isolation or calculated reticence of the school is shown by the absence of reference to Buddhism; and two verses which speak of the Mlecchhas, or barbarian, (l. 23, x. 46), are devoid of any particularity which would identify them with the Greeks or any other foreign races. For the ethical tone, see IA iv. (1875) 152 ff.

(c) THE EPICTHE Mahābhārata.—It is in the Epic literature, represented by the Mahābhārata and the Mahābhārata literature, that the Neo-Brahmanism is most fully illustrated. This period may be fixed roughly from 600 to 50 B.C. But beyond this the Rāmâyana lies a long period, when, as in the case of Homer, the ballads out of which the Epic were compiled existed in an oral form. Epistles are embedded in the existing texts which are regarded as fragments of older narratives, the antiquity of which is proved by the fact that their subject-matter often refers to the resistance offered by the warrior class to the growing claims of the Brahman hierarchy.

The Mahābhārata, after undergoing various reconstructions, is believed to have grown round a legendary nucleus during some eight centuries (400 B.C.-A.D. 400) (see Hopkins, The Great Epic of India, London, 1901, p. 336). The war between the Pánchavās and Kauravās, which forms the main subject of the poem, has been supposed to represent the contest between two successive bodies of Indo-Aryan immigrants, the former a Himalayan tribe practising polyandry, whose deity was Kṛṣṇa (Vāyu Purāṇa), the founder of the anti-Brahmanical monothetic Bhāgavata religion; the second much later comes and supports the official Brahmanism (G. A. Grierson, Census Report India, 1901, l. 287 ff., J.R.A.S., 1908, p. 904 ff.; 1909, p. 177 f.; A. Weber, IA xxx. (1901) 281 ff.). The Kauravya party won the day, but had in the end to yield to the supporters of Brahmānism. In this Epic the transition from the older to the newer Hinduism is marked in various ways. The facts have been carefully collected and analysed by W. W. Hopkins (Balt. of India, 351 ff.). There is, first, an abnormal growth of gods, or mental deities. "In the Brahmanism it is the sacrifice that is god-compelling; but in the Epic, although sacrifice has its place, yet when miraculous power is exerted, it is due chiefly to the intercession of the gods, or to the equally general use of formula; not formula as part of a sacrifice, but as is themselves potent; and mysterious mantras, used by priest and warrior alike, serve every end of magic."

Caste distinctions are now fully recognized, and the most heinous crime is to commit an offence against caste order. On the other hand, the greatest merit is to present gifts to priests, whose influence, greed, and rapacity are constantly dwelt upon. This, however, applies chiefly to court Brahmans and to ascetics, who are above all law, while the village Brahmans and heretics are free from the reproach attaching to their hypocritical, debauched brethren. Apart from the sectarian gods, the chief objects of worship are priests, the masses, and, for form's sake, the Vedic gods. These, with the addition of Kubera, god of riches, are now degraded to the rank of 'guardians of the house' (lakshapādana), and are definitely subordinate to the newer divinities. Among the latter is now included Dharmal Vasवā, the god of justice, son of the Sun-god. Another new and interesting figure is Kāma, god of love, who, in the form of the personification of sexual desire, is as old as the Atharvaveda (ix. 2, ii. 25) and is still the subject of a Mystery Play in S. India (K. Thurtton, Castes and Tribes of S. India, 366 ff.). The idea of kings as the "lords of the consorts, Bāti or Rāv, goddess of desire; and it has been suggested that his eminence is due to association with the Greek Eros, through the agency of Greek slave-girls, who about this time were imported into W. India (J. W. McInmlide, Peripatetic Calcutta, 1879, p. 133); IA ii. (1875) 145). The old Nature-worship is represented by the cults of mountains, rivers, and sacred trees, many ancient rites and beliefs being concealed under the "all-embracing cloak of pantheism," which appears in the Epic. It has been alleged that phallic-worship is often mentioned in the Mahābhārata, as if it had always been common everywhere throughout N. India; but this assertion has been disputed (Elvey Davidge, Buddhist Ind. iv. 155 ff., 1897, p. 357 f.). The local theriologv is illustrated by the cult of Hanumān or Hanumā, the monkey hero of the Rāmāyana, who in later times came to become the chief village guardian deity. Serpent-worship appears in the cult of Nāga.

From the religious point of view the most interesting portion of the Epic is the Rāmpwed-gīty, in which the Supreme Being incarnate as Kṛṣṇa expounds to Arjuna the result of the collective movement of the Śūrpiro, Yoga, and Vedānta doctrines (see E.B. ii. 336 ff.). It is now certain that portions of this poem, in which the doctrine of bhakti, or fervent faith, is taught, are pre-Christian, and therefore the doctrine itself is of indigenous Indian origin (ib. p. 547)."

"Nothing in Hindu literature is more characteristic, in its simplicity as in its profundity, in its logic as in its abstruseness, in its truth as in its falsity, than the Vedas, in which the Hindu mind has gathered the seed of its most ancient words in being interwoven inextricably, so that many of the penultimate anomalies, which would no less be the reader the hero to whom it was revealed, are probably later additions. It is a medley of beliefs as to the relation of spirit and matter, and other questions, which is uncertain in its tone in regard to the comparative efficacy of action and inaction, of sacrifice and prayer, and of the law of salvation; but it is at one with itself in its fundamental thesis, that all things are caught in each of the Lord, that man and god are but manifestations of the One Divine Spirit, which, or rather whom, the Vedānta re-writer identifies with Kṛṣṇa, as Vishnu's present form (Hopkins, The Great Epic of India, 351 ff.). It has become the Gospel of the Vaisnavas sectarians, and is the inspiration of the new school led
by Viveknanda (see § 32). For a criticism of its theology from the Christian standpoint, see Slater, Higher Hindustan, 1902, p. 128 ff.

The idea of the Makabhrata thus collected and popularized the legends and traditions which had their centre in the Holy Land of the Hindus, the Eastern Panjabh, the same service was performed by the Mahabharata, the eastern stories which originated in the kingdoms of Magadha and Kosala, the present W. Bengal. Like the Makabhrata, in its present differing forms, it is the result of a long series of recombinations, and considerable additions have been made to the original nucleus, which 'appears to have been complete at a time when the epic kernel of the Makabhrata had not as yet assumed definite shape'; and this earlier portion seems to be pre-Buddhistic (Mackinnon, Hist. of Skr. Lit., 363 f.; Rops Davids, Buddhist India, 163 f.). The first portion, that treating of the banishment of the hero Rama, is in form a historical saga, widely differing from the second part, which records the extension of Brahmanism and Buddhism, is based on N. Indian myths, and in the heroes, Sita, who is represented as having emerged from the earth with the power of prophecy, is the favorite myth of the Earth-spirit maidened to a consort, from whom union, by a sort of mimetic magic, the fertility of men, cattle, and crops is assured.

From a religious point of view the Edhayana is much less interesting than the Makabhrata, because it has been remodelled by a single hand, that of Vasilki, the traditional author, who has manipulated his materials to produce as an artistic poem and a religious treatise, in the interest of the Ramas-worshipping section of the Valayavas.

15. The historical development of Neo-Brahmanism.—The scanty information which we possess of the history of this period has been collected and arranged from materials derived from the writings of the later Vaishnavas and Buddhists, with the aid of inscriptions and coins, by V. A. Smith (Early Hist.).

The Maurya dynasty, founded by Chandragupta Maurya (321 B.C.), attained its supremacy under Asoka-Varudhana (see BEB II. 184 ff.), who made Buddhism the state religion. It was destroyed in 184 B.C. by Yasvantra and his followers, who, in order to assert his claim to be paramount sovereign, performed the auspicious rite of the horse-sacrifice (asvamedha a.y.c.). Thus marking the beginning of the Brahmanical reaction against Buddhism, which was fully developed under Chandragupta II. and his successors five centuries later. At the same time, there is no evidence that Buddhist or Jain suffered persecution. Under the next dynasty, the Cholas, we find a king supporting the idea system of Manu, and acting under the advice of Brahman ministers. This was followed by the Andhra dynasty, among the kings of which Hala is famous as a patron of Kritiki literature.

In the obscure period which followed, N. India was overry by hordes of invaders from the north under the names of Skaha or Skanda. The date is much disputed; but it appears that about A.D. 400 the Yuezhi or Kusana domination was consolidated in the N.W. by Kshatrapa, and that his successor, Yasvantra, ascended N. India and destroyed the Indo-Parthian power in the Panjabh. This Kusana empire lasted till A.D. 580. The important point to be noted here is that these foreign chieftains rapidly succumbed to the incessant invasions of the Huns and Turks, and were at least formally, to become Hindu Rsavencs (a.c. 150-250 A.D.).

From this point we have nearly any information until the rise of the Gupta empire under Chandragupta I. (A.D. 290-376), whose successor, Samudragupta, showed a sympathy with orthodox Brahmanism in his rule over the N. Indian states.

The claim of the people of the subcontinent to be the descendants of the Brahmanical religion to popular favour, and the associated revival of the Brahmanical religion to popular favour, and the associated revival of the Brahmanical religion of the Hindu-Aryan period, was fostered by the western empires during the third, and made a success by the Gupta emperors in the fourth century. These process, though apparently perfectly tolerant of both Buddhis and Jainism, were, beyond question, controlled by Brahman adherents, and skilled in Sanskrit, the language of the penitents. An early stage in the reaction against Buddhism condemnation of sacrifice had been

marked by Pusyamitra's celebration of the horse-sacrifices to the close of the second century. In the fourth, Samudragupta revived the same ancient rites with a enthusiasm; and in the fifth, his grandson repeated the solemnity. Without going further into detail, we may sum up the remark that coins, inscriptions, and monuments agree in furnishing abundant evidence of the Brahmanical belief. Among the Indian states the major influence afforded by the ruling powers to "classical" Brahmanism, especially in the expm of the more extreme, is indicated (Early Hist., 267).

The Gupta empire fell before the attack of another body of invaders, the Huns, about A.D. 500.

These successive invasions produced important results on the etymology of N. India. The progress and final absorption of these foreign elements in the Hindu population have recently been fully investigated for W. India (29 in. 1900) pt. i. p. 488 ff.; The Huns, or Hun, invaders were admitted by the Brahmanas among the Muns or wards of the Brahmans, the greater legend of the Brahmanas (Munice-Abh) (BEB. 114). Similar legends describe the successive introduction of foreign groups into the Brahmanic tradition (V. A. Smith, The Geography of the Brahman, 1906, ch. i.; D. B. Bhandarkar, The Geography, JASA, 1900, p. 197 ff.).

The influence of these foreign elements on Hindu beliefs must have been considerable; but the official Brahmanic literature gives little or no indication of the process of the reconstruction of the faith during the period of foreign rule. When we come to the establishment of the national power under Harsha (A.D. 606-647), the Brahmanic influence seems to have been re-established. Harsha was a Hindu, but in his later life favored Buddhism. He worshipped at times the Buddha or the Sun, or followed the Buddhist ritual, and he impartially erected temples to all three. Most of his subjects worshipped the sectarian gods, and selected as their patron deity whichever god they preferred (see Cowell-Thomas, The Harsha-caries of Edga, London, 1897, Introd. ii. ff.; M. L. Ittis, Brahmanism under Harsha, Vardhana, Louvain, 1906, ch. ii.). Thus the modern sectarian worship was gradually established in N. India; and the same revival occurred in the Deccan under the Chalukya king, Pula-kein I. (A.D. 550-608), who, in his decadence of Buddhism, is said to have performed many Hindu sacrifices, including the horse-sacrifice (BG I. [1896] p. ii. p. 191). The activity of the new faith is shown in the erection of numerous cave temples in the period A.D. 500-600 (Fergusson-Burpee, Cave Temples, 1980, p. 403).

16. The extension of Brahmanism in S. India.—The extension of Hindu influence into the South was obstructed by the great forest tract known as Dandakarya, the present Maratha country, and by the ranges of the Saptara and Mahadeo hills which cross the Peninsula, dividing the North from the plateau of the Deccan. Here the Brahman missionaries seem to have made their way along either the eastern or the western coast-line, or by the sea route. The question has been discussed in the article on the Bombay Presidency (BEB II. 788), and the facts there collected need not be repeated. The Aryans before the 7th cent. B.C. seem to have had little contact with the South, and R. G. Bhandarkar dates their acquisition of information regarding the southern region about 250 A.D. (BG I. ii. p. 141). The question has also been discussed by Rop Davids (Buddhist India, 23 ff.), by Caldwell (Davison Grammar, London, 1875, p. 114 ff.), and by H. A. Stuart, quoted by Theritri, Costume and Customs of Southern India, i. 573 ff. Burnell (A.I. (1872) 310) believes that about A.D. 700 Brahmanical influence was inconsiderable in the South, and that the Skr. place-names which are found appear only in the fertile deltas and at the seaports, where they were probably introduced by Buddhist missionaries. The latest discussion of the subject (A. G. Govindacharyar Svamini, (A.I. 211. 1912) 227 ff.) rejects Burnell's view, and places the Arianisation of the South after the 6th and before the 3rd cent. B.C., which is too early. The modern school of S. Indian scholars naturally adopts the higher
series of dates. Whatever may be the exact date of the introduction of the Brahmanical beliefs and practices into S. India, it was certainly, when contrasted with N. India, comparatively late; and this fact accounts for the characteristic form of S. Indian Brahmanism, which has developed on lines of evolution quite different from those of the North. (V. Kankasaahbi, T. Tamila: Eighteen Hundred Years Ago, 1904, p. 227 ff.; L. K. Anantha Krishnas Iyer, Cocker Tribes and Castes, ii. (1912) 171 ff.; Rice, Mysore and Coorg from the Inscriptions, 204 ff.).

17. The establishment of Hinduism in its modern form.—We have now reached the stage at which the Brahmanical reaction against Buddhism and Jainism was completed, and Hinduism, as we find it in existence at the present time, was firmly established. The Brahmanas now controlled the law and social institutions of the people. The theory of caste was fully adopted, and they were placed at the head of society; the movement led by the Kshatriyas in opposition to them had collapsed.

All philosophy, except their own pantheistic theosophy, had been driven out of the field. But Vedic rites and Vedic divinities, the Vedic language and Vedic theology, had all gone under in the struggle. The gods of the people received now the homage of the people. Virtues were still venerated (though feebly), but to new divinities; and Brahmins no longer presided over new rituals. Their literature had had to be revised to suit the new ritual, to gain the favour and support of those who did not reverence and worship the Vedic gods. And all sorts of new elements were added by the law of the country to give the theory of the past so as to make it tally with their own pretensions. The lower castes, with their increasing minority, continued to keep alive the flickering lamp of Vedic learning; and to them the Indian philosophers come only to look back with especial gratitude and esteem. (Rajas Devadas, Buddhism India, 1827, p. which somewhat overstates the case).

18. The development of Hinduism.—The Neo-Brahmanism, henceforward to be called 'Hinduism,' was developed in two ways: first, by the creation, mainly illustrated by the Epic and Puranic literature, of a gallery of deified personages, the legends regarding whom were largely drawn from the current folk-lore or popular tradition, and, by a reconstruction of the traditions, were in a measure connected with the system which they had superseded; secondly, by the adoption of deities, religious myths, and cults derived from the races beyond the BrahmITICAL pala.

We have examples of the first class in the deified heroes of the Mahabharata, the five Pandava brothers, whose cult still prevails in various parts of the country; at many of the hills in the Himalayas; in Bengal; in the Konkans and the Deccan; in S. India (Atkinson, Himalayan Gazetteer, (1864) 283 f.; M. A. Sherring, The Sacred City of the Hindus, London, 1883, pp. 177, 217; SG i. pt. i. (1896) p. 278, xxii. 389, xii. 404; Ferguson-Burgess, p. 113: Thurston, Ethnog. Notes, Madras, 1859, p. 251); and the second process by which the pantheon has been formed was by the adoption and absorption of the local deities, this localization being a feature which Indian polytheism shares with the Semitics and the Egyptians (W. R. Smith, Rel. Sem., 38 ff.; Sayce, HL, 59, 121; A. Erman, Life in Ancient Egypt, Eng. tr., London, 1894, p. 209 f.; A. Wiedemann, Rel. of the Anc. Egyptians, do. 1897, P. 81 f.). Naturally, the process of absorption, in India as in Greece, assumed many and varied forms.

We recognise now that the personages of the Greek and other polytheism were not pure crystallised products of a single and identical people, but were modified repeatedly by their environment, borrowing traits and epithets from other local pantheons, whom they may have dispossessed or whom they may have shared their rule. . . . The divine names, especially in ancient religions, was a powerful talent, a magnet attracting to itself a dense set of cult-ideas and legends (Parshall, CGS v. 86 f.).

The worship of vague spirits of the forest by the most primitive tribes, as the stage of settled agriculture displaces nomadism, develops into the cult of spirits which promote the fertility of the soil, cattle, and man. In Mysore, for instance, no fewer than 'four definite orders of spiritual beings have crystallised out from the amorphous mass of animistic Deities' (Hodson, The Madikas, 1906, p. 96). By degrees, one of these local deities, usually known in N. India as Devi, in S. India as the Grâmadevâta and Aiyârakâ, the central figure in the Madikas' mythology, and finally adopted by Brahmanism. This may occur because the shrine is on the borders of the territory occupied by more than one allied tribe or village, and thus acquires a reputation more than local; or because at this particular place there has been a manifestation of special spiritual power, always by their possession. Oft the medicine-man or his followers, or by some notable case of healing. Such a shrine is, in process of time, appropriated by some low-caste Brahman priest, and the local deity comes gradually to be identified with some manifestation or incarnation of one of the greater gods. Hence arose the Devi or Kâli of Calcutta, of the Vindhyâ hills, of Devi-patin in Orisâ, and the Bhârâti of Tâjpur in the Nizam's Dominions, who possess powers of magic, wonder-working, and healing superior to those of the village gods of the area in which they have been promoted. The same is the case with the shrines dedicated to men who gained a reputation for good works or wickedness in this world (Lyall, A Book of Tales, 259 f.) or in the next, it is not always possible to trace the exact course of the evolution. This difficulty is increased in India by the absence of expressive cult-titles, which in Greece have so largely facilitated the tracing of the elements of the pantheon (CGS l. 25 ff.).

19. Modern Hinduism defined.—In tracing the evolution of religion in India, no problem is more difficult than that of framing a definition of Hinduism as we observe it at the present day. Many of the tests which have been proposed from time to time are obviously inadequate. It has been said that a Hindu is one who receives religious service at the hands of Brahmins. But in the Panjab nearly all Sikh villagers reverence and employ Brahmins as their Hindu neighbours do, and the same is the case with the Jains; while many Hindus who have been converted to Islam appoint the Brahman to conduct their marriages according to the Hindu rule, adding the Muhammadan ritual as a legal precaution (Ibbetson, Panjab Ethnography, 121 f.). The difficulty of framing a definition of Hinduism arises from the fact that under the general title 'Hindu' are included classes whose beliefs, ritual, and mode of life are strangely diverse—the learned Brahman, who is a follower of the Vedânta philosophy; the modern theist or agnostic, trained in the learning of the West; the semi-barbarous hillman, who eats almost any kind of food without scruple, knows little of Brahmânical mythology, belief, or ritual, and is in need of custom to point out the stones which he supposes to be occupied by the god of his tribe or village; lastly, there is the vagrant, or the member of a caste like the Chuhra or Bhangi of N. India or the Telugu Brahman, who is abhorred by all pure Hindus. The difficulty, in short, lies in separating the Animist from those classes of Hindus whose beliefs have a more or less animistic basis.

Recent writer proposes to include among Hindus

1all natives of India who do not belong to the Muslim, Jain, Buddhists, Christian, Parsi, Jew, or any other known religion of
the world, and whose form of worship extends from monothelitism to deism, and whose theology is wholly written in the Sanskrit language" (Census Report Baroda, 1901, p. 190). 

This statement is factually satisfactory, though it ignores the fact that Hinduism is not a religion in the sense of the word as used by European scholars. Thus a Hindu writes: 'Hinduism is that which is set forth in the Vedas.' In other words, it is a question of ritualistic and social observances (Guru Foshad Sen, Intro. to the Study of Hinduism, 1883, p. 9). The current terms, 'Hinduism' and 'Brahmanism,' are of European origin, the only Hindu general term for 'religion' being dharma, defined as 'established order, usage, institution, custom, prescription; rule, duty; virtue, moral merit, good works; right, justice, law' (Macdonell, Skr. Eng. Dict., London, 1885, etc.). According to Mann (Laws, ii. 6 [Skt. xxv. 30]), the Veda Veda is 'the head source of the sacred law, next the tradition and the virtuous conduct of those who know the (Veda further), also the customs of holy men, and (finally) self-infusion. Dharmas is distinct from 'the path' (marga), inasmuch as 'the path' came into existence at a definite period, while dharma is eternal. 'The path' and 'the doctrine' (marga), combined together, are often expressed by one word, sampradaya, literally 'that which is given,' which Monier-Williams (Brahmanism and Hinduism, x, 61) defines as 'a particular body of traditionary doctrines handed down through a succession of teachers,' also designated 'darsana or marga—that is, particular views or opinions on religion or philosophy.'

'The great difference between the Hindu conception of the ḍharma' and the European conception of 'religion' is this. The latter is defined by us in strictest terms, and the acceptance of these ideas and practices that are included under the word would include Christians. In the case of Hindu dharma, the relation is different. Hindus are a definite body, and Hindu dharma is that indefinable thing which the Hindus consider their own dharma. . . . The word ḍharma is itself a foreign one. The Hindu never used it in any Sanskrit writing, that is, those which were written before the Mohammedan invasion. In fact there was no need of calling themselves by any particular name (all the rest of the world being 'foreigners') (Machiavelli, Greek Philosophy). . . . Hindus define a Hindu as a man who has not fled from Hinduism, that is, taken up the membership of any community like Christians, Mohammedans, and Buddhists. Hinduism is an ever-changing society, which may expand and take in races and peoples irrespective of their religious beliefs. What society it will absorb depends almost entirely on the circumstances' (Byron K. Bunker, Theodore F. V. Lane, 25, 26).

For practical purposes the definition proposed by Lyall may be accepted, that Hinduism is 'the collection of rites, worship, beliefs, traditions, and mythologies that are announced by the sacred books and the ordinances of the Brahmans and are propagated by Brahmanical teaching. And a Hindu is one who generally follows the rules of conduct and ceremonial thus laid down for him, particularly worship of gods. And the Hinduism as distinguished from other than Hinduism, may vary within the same limits, believe in God, respect the cow and cremate the dead' (General Report Punjab, 1913, I. 109). For criticism of other proposed tests of Hinduism, see Ganges, 1911, United Provinces, I, 120, Madras, I, 60, Madras, I, 60, Madras, I, 60, Madras, I, 60.

20. Hinduism as a missionary religion.—Though the idea of a missionary religion, the theory which underlies the system is that all residents of India are born Hindus. This is illustrated by the controversy which arose upon the question of admission of Indians of other faiths to missionary societies, and by the history of missionary activity in India. The Lectures on Missions delivered in Westminster Abbey in 1877 (Selected Essays, 1881, p. 49), F. Max Muller argued that the Hindu faith is essentially a missionary one, and that it is opposed to all missionary enterprises; while three have a missionary character from their very beginning—Buddhism, Mahomedanism, and Christianity. Comparing Brahmanism with Judaism, he argued that 'a very similar feeling prevented the Brahman from ever attempting to persuade those who did not by birth belong to the spiritual aristocracy of the country. Their work was rather to keep the light to themselves, to repel intruders; and they went so far as to punish those who happened to be powerful enough to hear the sound of their prayers, or to witness their sacrifices.'

This was written from the point of view of a student of the Hindu sacred books, not of a practical observer of the people, and, as he afterwards explained, by missionary religions he meant 'those in which the spreading of the truth and the conversion of unbelievers are regarded as the rank of a sacred duty by the founder or his immediate successors' (ib. I. 94). This view is so far correct that Hinduism was not the creation of any single founder, and that no authority has ever controlled its organization or systematically promoted the conversion of the heathen. In his reply to these remarks, A. Lyall (1. 134 ff., cont). contends:

'so far from it being a non-missionary religion, in the sense of a religion that admits no proselytes, one might safely say that more persons in India become every year Brahmanists than all the converts to all the other religions in India put together. . . . If by Brahmanism we understand that it is the religion of the Hindus which refers for its orthodoxy to Brahmanical scriptures and tradition, which adores the Brahmanas, which finds their incarnation in the cow, observes certain rules of intermarriage and the sharing of food, and which regards the Brahman's presence as necessary to all essential rites, then this religion can hardly be called proselytizing, in the sense of stagnation and exclusive immobility. . . . It is the word proselyte may be used in the sense of one who has come, and who has been formally admitted, not necessarily before one that has been lost, or persuaded to come, then Brahmanism might lay claim to being the most successful proselytizing religion of modern times in India' (ib. I. 135).

The question thus resolved itself into a controversy between two writers who disagreed as to the question from two different points of view—one a student of the sacred books, who treated Hinduism as an organized religion founded on an ancient literature, and who regarded proselytizing as a conscious, well-defined procedure carried on under conditions analogous to those which characterize Christian missionary work; the other an acute observer of the almost unconscious, unorganized methods by which the non-Aryan tribes are induced to enter the fold of Hinduism. The controversy is now somewhat obsolete, and, in the judgment of all competent observers has been finally settled in favour of the views advocated by Lyall. For a recent discussion of Hinduism as a missionary religion, see Shribhar V. Keshava, Theologie Religiose, 1902, 22.

21. The conversion of the non-Aryans to Hinduism.—The process by which the non-Aryan tribes are converted to Hinduism is desribed by Lyall in an essay familiar to all students of comparative religion (l. c. 174). Such conversion is naturally most common on the outskirts of the territory long occupied by the settlers of Aryan descent and visited the queen, who was herself none other than an incarnation of his divine spouse, Păravtī.

The Kachchhi kings of Bhimnagar were simultaneously converted and after their ancestor had been satisfactorily traced back to Bhim (one of the Prajapati princes of the Mahabharata) the two chiefs were placed about A.D. 1793 in the body of a large copper image of a cow, and thence proscribed as declared Hindus. . . . For the Arunachal, India was selected as the proper place for the conversion, but no special origin seems to have been assigned to the common people, so that an Arun on conversion takes his name in the Hindu caste system, in his own estimation, as he does in that of orthodox Hindus (Census Report Assam, 1898, I. 83; cf. art. KACHCHH, vol. ii. p. 177.).

The process is often gradual. When the Kachchhi first puts himself under the guidance of a goad, or teacher of the Vaiṣṇava sect, he is a Hindu in little more than name, eating pigs and fowls, and continuing to drink strong liquors. After a time he somewhat modifies these abominable practices.
HINDUISM

and then, after several generations, when the family has given up or concealed its taste for forbidden food and drink, becomes, in appearance and to some extent, ceremonially pure, its members are finally promoted to the rank of orthodox Hindus.

This, however, is a matter of many years, as spirits and gods are mortal. and what a man who would have been a pure Hindu remains outside the pale, becomes, in fact, to recover the nourishing diet of his ancestors (Cr. ii. 94).

Some Asamese, when they profess a desire for conversion, are compelled to fast for a day or two (fasting being a form of purification from malignant spirit influence [A. E. Crawley, The Mystic Roes, London, 1901, p. 153]), after which they undergo a rite of atonement (prayashchita) at the hands of their teacher, who claims a suitable fee. But for at least three generations they are somewhat despised, and take no part in social affairs. After this, they rank as Hindus (Census Report Asam, 1901, i. 282). The condition of things in the Central Provinces, where tribes like the Gonds (q.v.), are rapidly becoming Hinduised, is very similar (Census Report, 1901, i. 96).

22. Hindu sectarianism.—The process of the formation of new sects provides another method by which outsiders are admitted into Hinduism. The worship of the sectarian deities grew up during the period represented by the Epics and the Pāñḍava, but the material for tracing their evolution is very scanty.

(a) Brahmap.—Of the members of the Hindu tribes, Brahmap has now become an old, decadent divinity, mainly because he was always a god of the philosophers rather than of the common people. The process of his degradation is clearly marked in the Mahābhārata. It is commonly said that he has only a single shrine, that at Puskara in the Rājputana. But he has also a temple at Khed Brahmap in the State of Māhārāṣṭra in the Ghats (BG, 1780, p. 282); but the material for tracing their evolution is very scanty.

(b) Siva.—The philosophical side of the cult of Siva represents him as 'the earliest and universal impression of nature upon men—the impression of endlesss and lifeless change' (Livy, ii. 220). But he has also assimilated much of the demonolatry and Animism of the non-Aryan races, as in his manifestation as a Bhūmap, 'lord of gods', in which form his cultus was well adapted to serve the needs of the devil-worshipping Dravidians of S. India. He is the descendant of the Vedio Rindra, who has a benediction, as well as a malevolent character (Muir, iv. 339; Macdonell, Vedio Myth., 77), the latter being veiled under his epithetic title, Siva, the suspicious one. This seems no good reason to assign the origin of Siva, the special Brahman god, to the non-Aryan races, though his cultus may have been contaminated by their influence (Muir, iv. 349). It must be noted, however, that his temples are very commonly served, not by Brahmanas, but by members of the sacerdotal orders connected with his cult. For example, among the Sāiva temple priests in the Himālayas (H. A. Rose, Census Report Punjāb, 1901, i. 127 f.). This is also shown by his cult-titles, Girās and the like, 'mountain-god', and those of his consort Uma, Parvati, the 'she of the Himalayas', and some Greek writers identified him with Dionysus (J. W. McCrindle, Ancient India as described in Classical Literature, 1901, p. 94 n.; and in the introduction of the cultus was due to the movement of Hun tribes from the north (BG ix. 1901) p. 478). He is at once a god of Nature, the impersonation of the archetypal love and desire in him, to recover the nourishing diet of his ancestors (Cr. ii. 94).

The worship of Siva.—In modern Hinduism the symbol of Siva is the linga, or phallic. Phallic worship appears in the Vedas in the śākta-dēśas, 'those who have the phallicus as their deity'; but this seems to be regarded as a non-Aryan cult, and Siva is besought not to allow them to approach the sacrificial (Macdonell, Vedio Myth., 156). In Buddhism and in the Aṭhavārāveda we meet phallic genii (bhūmabhāsa, bhūmabhāsā; Weber, IA xxx. (1901) 292), and in the Mahābhārata it is mentioned as if it had been common in N. India; but it is not included in the magnificent forms of worship described in the Buddhist Nīkāya (Iṣya Davids, Buddhist India, p. 165 f.). The original significance of the lingas in India is obscure. Ferguson was disposed to connect the symbol with the Buddhist dagāka, one of which has been found adapted to Sāiva worship in a cave at Wāl (Hist. of Hindu Arch., i. 1899, p. 304 f.; Ferguson-Buerges, 213; F. A. Malsley, Sascoē, London, 1892, p. 16 n.). Oppert suggests that it is derived from the Greek— a view which seems improbable (Orig. Inhabs., 281; Muir, iv. 181, 421). Stephenson (J. R. A. S. viii. (1842) 330) and F. Kittel (Vestfer den Ursprung der Linga-vuluses in den Kāshī) connected phallic worship with the non-Aryan tribes. In opposition to this view, we have the important fact that the twelve great linga shrines, only three, those at Orchha, the Narāyan, and the Bhāmatas at Nāsir, and Bhima-śākhara in the Deccan, can be reasonably classed as outside the distinctively Aryan area, and early traditions associate the establishment of lingās in N. India with Aryan saints and worthies (Muir, ii. 302, iv. 189 ff., 405 ff.). It may also be said that phallic worship is not general among the forest tribes at the present day. Thus, though the Todas are apparently immigrants from Malabar, there is no evidence of phallic worship among them (W. H. R. Rivers, The Todas, London, 1906, p. 441). On the whole, the facts seem to indicate that, though the cult may have prevailed among some of the indigenous tribes, it was not confined to them, and that in the forms in which it now appears its extension was largely due to the Aryan.

The prevalence of this ancient symbol of fertility and life in the cults of India shows that in the more naive religion of the older age there was not yet that divorce between the physical and moral world which the spiritual law of modern religion has made (C. G. S. iv. 11 f.). It is 'by no means an early or a universal cult. It can only become prominent in a population having a settled abode and cultivating the soil (Hardras, Primitive Potency, i. 122). It seems to be an aberrant form of the cult of stones and pillars which was widely distributed in the Himalayas and the Deccan (Frazier, Faw]an., London, 1888, iii. 530, iv. 110, 154, 318 ff.; C. G. S. iv. 149, 307; BDB lii. 1070 ff.; art. BAAL, vol. ii. 387 f.). Some of the goddesses, and Śimvas, 'she of the Himalayas, and some Greek writers
shrines of Yajñavalkya at Benares is 'simply an enormous block of stone, round and black, six feet in height, and twelve in circumference' (Sherring, Sacred City, p. 117). That of Rishabharat in Bhopal is 7½ feet high and 17 feet 6 inches in circumference, raised on a massive platform (IIG viii. [1906] 18). That of Siva at Shyamlila, Jamnagar, by J. Frawza has shown, widely distributed (JBS xx. [1901] 99 f.). One of the pillars of Ašoka at Benares (ERE ii. 458) has now become the famous fist, or palm, of Śiva. The yinbol, iron belt, is not necessarily indecent (Rajendralal Mitra, Indo-Aryan, i. 146 f.; IIG xvii. 209). Among the Salvas it is not connected with eroticism, a tendency distinctly absent from the cult of Śiva. This, however, refers only to the devotees of the higher class; and, when it is worshipped in connexion with the female sex, the yinbol among the Yaunja (q.v.) occurs. In the Deccan, it undoubtedly has a sexual suggestion (cf. Elliot, Hist. of India, iii. 91; Hartland, Primitives Paternal, i. 193). Its connexion with Śiva may probably be traced to his manifestation as a god of reproduction, as, for instance, when he appears as Mātrurājya, 'destroyer of death.' Even in the Veda, he, as Fadsputa, 'lord of beasts,' a title of Rudra, is regarded as the agent promoting fertility in cattle (Macdonell, Vedic Myth., 75). In parts of the Deccan, as a mode of mimetic magic, the marriage of Śiva and Parvati periodicaly celebrated (BG xxii. 1862) 578; V. A. Smith, Hist. of Fine Art in India and Ceylon, p. 215; cf. CGS v. 217; Fraser, GSB ii. 304 ff., and in this connexion to be connected with tree-worship (ERE ii. 312). The same conception doubtless underlies his manifestation as Arūḍhā-nārāyaṇa, half male and half female figure of Puruṣottam and Prakriti, the central idea of Nature-worship (see ERE ii. 389). We may also compare the phallic processions which occasionally accompany the Holt celebrations in India, as in the cult of Nathūram at Gwalior (Crooke, PBP ii. 319 f.), the phallicōra of the Dionysus worship in Greece, 'which arises from the same source as those which (q.v.) use the corporal union of the husbandman and his wife in the cornfield at the time of the sowing or after reaping' (CGS v. 197, 206; Fraser, GSB ii. 206 ff., GSB, p. l. vol. ii. p. 97 ff.). The story of Viṣṇu cutting up and scattering the fragments of the linga throughout the world reminds us of the mutilation of Ośtra, and the Kāñch custom of distributing the ashes of the human representative of the spirit of vegetation as a fertilizing charm (Fraser, Adonis, Atis, Ośtra, London, 1907, p. 321; OVS vii. 191). As in the case of the goddess of fertility, the bull is the appropriate emblem of Śiva (Fraser, Adonis, pp. 86, 180, GSB ii. 312, 295; J. J. Milne, Hymns of the Vedic Age, p. 72; J. C. Walker, Wademann, 178 f., 197 f.). The conception, also, of the phallos as a protective (aproteroimg) may, as in the case of the Greek Hieromai, have contributed to its popularization (CGS v. 32). On the worship of the linga in India, see Mrir, iv. 343 ff.

23. The popularization of the cult of Śiva.—The popularization of the cult of Śiva involved a number of Jesus, the adoption of various local deities as his manifestations. The most respectable of these is Ganesāi, or Gaṇeśa, lord of the triple of deities attending the god. His worship starts from the Paurāṇic period; and, except in one legend contained in the northern recension of the Mahābhārata, he does not appear in the Bhārata. His symbols of the elephant and the rat connect him with some local idolatry; but he is now independent, and, though he is a member of the Śiva group of deities, he has become a chief of his own sect, and all sects agree in doing him honour as the god of luck (IA xxx. 255 f.; cf. Brāhmaṇism, vol. ii. p. 807 f.). Another deity of the same class is Kanda, or Karttikeya, who was the family-god of some W. Indian dynasties, and now, under the name of Subrahmāya, is most popular in S. India, where his association with the Mother-goddesses is shown that he is connected with the cult of Śiva. (BG i. pt. ii. pp. 180, 287; Oppert, 309, 370). In a much lower class is Khaḍḍobh, or Khandaṅva, 'sword father,' probably a defiled non-Āryan prince, now the chief guardian-deity of the ocean, where his cult shows obvious signs of contamination with those of the forest tribes (BG xviii. pt. i. pp. 200, 413 f.). Similar instances are to be found in the identification of Śiva—Viṣṇu as Harihara with the non-Āryan Aiyārak, or Veṭāla, the demon-leader and ghost-scare of the Tamil, Kamarāsa, and Deccan peoples (BG xxii. 1885) 558, xviii. (1885) pt. iii. pp. 347, 388.

24. The yoga and asceticism.—The system of yoga, by which, through strange postures, suppression of the breath, self-restraint, and meditation, the soul seeks union with the Supreme World Spirit, was an outgrowth of the Sākhya philosophy, and, though dogmatically no part of the Vedanta, reached its fullest development under Patañjali about the 2nd cent. B.C. In the time of Buddha it was recognized, as it continues to be in the later forms of Buddhism, and the condition of ecstatic abstraction was held in high esteem (H. Kern, Manual of Indian Buddhism, 11; Macdonell, Hist. Sbr. Ltd., 330 ff.; L. A. Waddell, Buddhists of Tibet, 148, 141). It is to be connected with tree-worship (ERE ii. 312). The same conception doubtless underlies his manifestation as Arūḍhā-nārāyaṇa, half male and half female figure of Puruṣottam and Prakriti, the central idea of Nature-worship (see ERE ii. 389). We may also compare the phallic processions which occasionally accompany the Holt celebrations in India, as in the cult of Nathūram at Gwalior (Crooke, PBP ii. 319 f.), the phallicōra of the Dionysus worship in Greece, 'which arises from the same source as those which (q.v.) use the corporal union of the husbandman and his wife in the cornfield at the time of the sowing or after reaping' (CGS v. 197, 206; Fraser, GSB ii. 206 ff., GSB, p. l. vol. ii. p. 97 ff.). The story of Viṣṇu cutting up and scattering the fragments of the linga throughout the world reminds us of the mutilation of Ośtra, and the Kāñch custom of distributing the ashes of the human representative of the spirit of vegetation as a fertilizing charm (Fraser, Adonis, Atis, Ośtra, London, 1907, p. 321; OVS vii. 191). As in the case of the goddess of fertility, the bull is the appropriate emblem of Śiva (Fraser, Adonis, pp. 86, 180, GSB ii. 312, 295; J. J. Milne, Hymns of the Vedic Age, p. 72; J. C. Walker, Wademann, 178 f., 197 f.). The conception, also, of the phallos as a protective (aparotomēw) may, as in the case of the Greek Hieromai, have contributed to its popularization (CGS v. 32). On the worship of the linga in India, see Mrir, iv. 343 ff.

25. Development of the cult of Śiva.—We know little of the early development of the cult of Śiva.
The Sibbs of the Panjâb, according to Magaszenes, who visited India about 20 years after the death of Alexander the Great, branded their cattle with the trident symbol of the god, or rather perhaps with the mark of the club of Hercules, who was identified with him (McCrindle, *Anc. India* as described by Magaszenes, 1877, p. 111; *J.R.A.S.,* 1907, p. 267). Earthenware, who seems to have lived in the beginning of the 3rd cent. A.D., and whose account is preserved by a late compiler, Johannes Stobbius (c. A.D. 500), apparently describes the worship of the god in the hermaphroditic form of Ardhanârîs (McCrindle, *Anc. India* as described in *Classical Lit.,* 172 f.). His image, attended by that of his bull Nandi, with the noose, trident, and other symbols, appears on the coins of the Kuśâ king Kañhipiśa II. (c. A.D. 90-100) and Vâṃśâvara (A.D. 185-236). In the 3rd cent. his cult seems to have been established throughout India (*J.R.A.S.,* 1907, p. 978). In S. India, Saivism was the oldest form of Brâhmanism, and its rise is connected with a teacher named Lâkûlîs, as far back as the first centuries of our era (Rice, *Mysores and Coorg,* 206; cf. D. R. Bhandarkar, *J.R.A.S.* xxvi. [1910] 161 f.). At a later period his worship was adopted by Hindu, king of Bengâl, the founder of the Buddhists, and by the emperor Harâsa, both of whom reigned early in the 7th cent. A.D. (Smith, *Early Hist.,* 251 f., 518 f.).

The propagation of the cult was the work of a series of missionary teachers, who, like the founders of the revived Vaiṣṇavism, came from S. India, where Hinduism, comparatively safe from the invades of the foreigner, was allowed to follow the natural course of its evolution undisturbed. This is shown by the greater abundance of the inscriptions surviving in that region, where the Mohammedan influence has been least. The centres of fanaticism in the N., were less hostile to Hinduism, and did less damage to the temples and the records in stone (I* A xxx. 17*).

The first of these teachers was Kumârâs Bhâšâ, a learned Brâhman of Bihâr, who in the 8th cent. A.D. restored the ancient Vedic rites, and encouraged the practice of Buddhism in the Himalayas to Cape Comorin. A follower of the Mimâmsâ school, he was accused of heresy, and thus led to a divine act of creation, and assumed an all-powerful Deity as the cause of the existence, continuation, and destruction of the world. He is celebrated, as a philosophical argument in opposition to Buddhism, the Veda principle of the non-duality (advaita) of the Godhead. His mantle fell upon his more famous disciple, Sâkśkarâcarya (c. A.D. 747-749), who moulded the Uûâ-mimâmsâ philosophy in its final form (Sri Sâkâkrâcarya: *His Life and Times, His Philosophy,* by C. N. Krishnaswami Aiyer and Pandit Sûnanâth Tatâktâvâsûñak, Madras, n.d.; *Census Report Travancore,* 1901, p. 101 f.; L. K. Ananta Krishna Iyair, *Cochin Tribes and Castes,* ii. [1912] 226 f.).

"He seems to have arisen as an inspired genius to throw a quick, bright light, like to the momentary after-glow of an Indu’s subside. In the darkness descends over the land, on the failing glories of Aranyana before they sink into the dimness of the four dark days of Hinduism.... According to the teachings of Sâkâkarâcarya, the entire system of Vedântic thought finds its national completion in an uncompromising declaration that the sole object of the sacred literature of India was to reveal the divine appearance of what appeals to the senses as reality and the doctrine of non-duality. The question of metaphysics is solved, not as Kant resolved it, by referring all objective reality to perceptions of the intuitions where he sought a solution, but in endeavouring to pierce, in the manner of Plato, and Parmenides, the sense of reality itself. The objective form was held by Sâkâkarâcarya to be the mode in which the devotion of his worshipers was mirrored forth" (R. W. Frew, *Literary Hist. of India,* 1864, p. 293 f.).

To him is due the foundation of the Smârta sect among the Brâhmans of the Deccan, who take their name from their adherence to authoritative tradition (smritis), as opposed to the Vedic Scriptures (*brâhman*). They worship the Triad, Brâhma, Vîšnu, and Siva, under the symbol of the mystic syllable Oṁ, and while abiding these three deities they exalt Siva to the highest place. They hold the pantheistic Vedânta doctrine of non-dualism (advaita), asserting God and matter to be identical, and everything else an illusion. The Deity is said to be the sole being and is the Supremest Being (*Râma Gâtaka*; *Mysore,* 1897, l. 256, 471 f.).

But these Brâhmanic movements were too philosophical to be comprehended by the common folk, and the real popularization of Saivism in S. India was left to the Brâhman Saiva, as he is called in the Lîngâyat Purâṇa, the date of whose origin is discovered by tradition in A.D. 785. But it has recently been discovered that the real founder of this sect was the Brâhman Ekâstâras, who revived Saivism in its popular form in the latter half of the 12th cent. A.D. (I* A xxx. 2*; *BG* i. 15. 30; p. 243 f.; Rice, *Gâvâcarya,* l. 476, *Mysores and Coorg,* 206).

The Lîngâyats (p. s.) may be described as Hindus who deny Brâhman ascendency, and claim to receive from their own priests (jâgannâtas) the eightfold protection (*śrûyusnras,* or, as others term the rites, "the six things") and to be the designated "future temple". With the denial of Brâhman ascendency they have discarded other orthodox rites, such as the cremation of the dead, the observance of the fasts of the month and the observance of caste, pilgrimages, and penances. As is so often the case with such movements in India, there appears now to be a tendency among these orthodox sects to adopt the more modern theologies, and to compromise between the Vaiṣṇavism and the Saivism (Rice, *Gâvâcarya,* l. 476 f.; *Census Report Bombay,* 1901, l. 190 f.; *Census Report Mysores,* 1901, l. 530 f.; *BG* xxviii. 216 f.).

26. Vaiṣṇavism.—The centres of the Vaishnava cult are the temples of Siva, the like of the ancient Vedic rites, and encouraged the practice of Buddhism in the Himalayas to Cape Comorin. As a popular movement, it has spread throughout India, and its influence is felt in every corner of the land. It is characterized by a deep devotion to the deity, and its followers are known as Vaishnavas (p.s.).

"The Vaishnavas are devoted to the worship of Lord Krishna, the eighth avatar of Vishnu. They believe in the divine nature of Krishna and his ability to manifest himself in various forms. The Vaishnavas have a rich tradition of literature, which includes the Bhagavad Gita, the Ramayana, and the Mahabharata. They also have a strong devotion to the goddess Radha, as the consort of Krishna. The Vaishnavas have played a significant role in the cultural and religious life of India."
HINDUISM

only in aberrant form (J. G. Fraser, Totemism and Esvagam, London, 1910, iv. 13). More probably the animal cultus sprang from the Aryan or non-Aryan theocratie, the sacred animals being 'regarded in relation to a more generalised conception of the Divine power, which lies behind them and finds expression through them'. (A
dv. v. 114). As Seelye points out in the case of Babylonia (H. L., 112), in the local god was originally theriomorphic, and when he assumed an anthropomorphic shape there was no room for the primitive animal forms save as they are retained or are remnants of the god. To the modern believer it is sufficient to be told that the god assumed these successive forms to save mankind from ever recurring attacks of the forces of evil.

It is in his later developments that the influence of the non-Aryan races is most apparent. On this question Molony (Census Report Madras, 1912, I. 81) remarks:

Whatever be their present-day union or interminglement, it is difficult to imagine any original connection of the Aryan Brahmans, and their native philosophies, with the gross de
coracy of the Dravidian peoples who surrounded them. Philosophy, however, which has never been suspected of being dead, is likely to be the attempt to find an answer, without the aid of a specific cultus, to a certain demand to absolve; it is unlikely that the early Aryan theists made any serious efforts to other deities, but after the rise of the Aryan culture the deities are known to the Undeclared intellectual supern
cient, and the connecting bridge between their own somewhat unsatisfactory speculations and the extremely materialist dogmatics of the Dravidians.

There is some force in this statement; but when the Brahmans, at some period subsequent to their arrival in S. India, seriously undertook the task of absorbing the local idolatries, the result of the com
dition between the cults of Visnu and Siva, the special groups like the Nambittiris, Brahmanism survives merely as a veneer over the indigenous beliefs. This process of absorption assumed varied forms. Thus in the Deccan and S. India, Vithoba, or Vytahal, of Pandharpur (q. e.), who is generally believed to have been a deified Brahman, is accepted as an incarnation of Visnu. It has been suggested that his name is derived from Visnu, a form of Visnu, modified under Dravidian influence (J.R.A.S., 1907, p. 1033). So also Balaji, usually identified with the god from the Khond Community of Tripetty, or Tirupatti (q. e.), and claimed to be a local deified saint. The same process appears in the case of some Vaishnavas. Badeo and Kurupattina, 'best of men,' are believed to be mountain-dwellers absorbed into the Visnu cultus (Atkinson, Himalayan Gazetteer, ii. 792; Mur, iv. 297) in Travancore, under the title of Pad
tanaha, 'he whose nasal springs the lotus,' he is at Trivandrum connected with a serpent-cult. In A.D. 1752 the Maharajah dedicated his royal person and kingdom to this his tutelary god, and at his succession his first official title is that of a Ser

These local manifestations, however, are of small importance compared with Rama and Krishna. Their cults present so many intricate problems that the consideration of them must be left to special articles. The influence of Christianity on their development is discussed in art. Brakti-Marga, vol. ii. p. 549, and the Keralites, vol. ii. p. 811 f.; J. Kennedy, J.R.A.S., 1907, p. 561 ff.

27. The popularisation of Visnavism.—As was the case with Daivism, the popularisation of the Visnavas cultus was the work of several missionary teachers, and in this case also the inspiration came from S. India. The first of these teachers was Ramanujacharya, also called Emburumunarkar, who, according to the common tradition, was born at Srimattur about A.D. 1197, and, after a life which is said to have extended to 120 years, was buried in the temple of Srinivanasana at Trichi

The chief religious tenet of the sect of Ramanujas or Sri Visnupas is the assertion that Visnu is Brahma, the original creator of the world, and when he assumed an anthropomorphic shape there was no room for the primitive animal forms save as they are retained or are remnants of the god. To the modern believer it is sufficient to be told that the god assumed these successive forms to save mankind from ever recurring attacks of the forces of evil.

It is in his later developments that the influence of the non-Aryan races is most apparent. On this question Molony (Census Report Madras, 1912, I. 81) remarks:

tanaha, 'he whose nasal springs the lotus,' he is at Trivandrum connected with a serpent-cult. In A.D. 1752 the Maharajah dedicated his royal person and kingdom to this his tutelary god, and at his succession his first official title is that of a Ser

These local manifestations, however, are of small importance compared with Rama and Krishna. Their cults present so many intricate problems that the consideration of them must be left to special articles. The influence of Christianity on their development is discussed in art. Brakti-Marga, vol. ii. p. 549, and the Keralites, vol. ii. p. 811 f.; J. Kennedy, J.R.A.S., 1907, p. 561 ff.

27. The popularisation of Visnavism.—As was the case with Daivism, the popularisation of the Visnavas cultus was the work of several missionary teachers, and in this case also the inspiration came from S. India. The first of these teachers was Ramanujacharya, also called Emburumunarkar, who,
reform which led to important results throughout N. India, and especially in the Panjab (Census Report Panjab, 1891, l. 123 f.; Census Report Punjab, 1894, l. 177 ff.; Proc. R. Soc. [1893] 53). 38. The Muhammadan conquest.—The course of the evolution of Hindu beliefs was rudely interrupted by the Muhammadan conquest of N. India.

The period between the conquest of the three major empires—the Maurya, the Guptas, and the Cholas—appears to the same tale roughly into three periods: first, a time of invasions ending in final conquest (A.D. 607-1303); that of the Kingdom founded as a result of the first conquest (1303-1603); and, lastly, the Mughal Empire, which finally passed away when the last emperor was deposed (1603-1803). During the early period the Muhammadans aban in descripts of religious and cultural annals of Hinduism, its destruction of their temples and other religious institutions, in A.D. 988, Mahmud of Ghazni penetrated Kashi, the Mughal Empire, which finally passed away when the last emperor was deposed (1603-1803). During the period the Muhammadans annals abound in descriptions of ruthless massacres of Hindus, destruction of their temples and other religious institutions, in A.D. 988, Mahmud of Ghazni penetrated Kashi, and destroyed the famous Somnath (p. 182) temple, a.p. (1814) captured Benares, destroyed nearly a thousand temples, and raised mosques on their foundations (Gilchrist-Bowen, Hist. of India, 1897-99). A.D. 1625-1868 sacked the capital city of Bhillah, and sent the idols to the gates of Delhi to be buried under the feet of true believers (p. 148). Even Pritjch (1814-1884) more moralistic than many of his predecessors, prized himself on destroying temples and torturing unbelievers (pi. 800). The invasion of Timur in A.D. 1650 accounted for 20,000 Hindu pilgrims, and such as Hardwicke and other places (iii. 304 f., 305 f., 306 f.) was not till the reign of the great Akbar (a.p. 1668-1663) that the faith of his Hindu subjects was deemed any security of protection. This change of policy was due mainly to his laxity on questions of Moslem orthodoxy, to which he was very indulgent. When he died (1666), Hindu Populates, few priests, and Jesuit missionaries, dreaming of a persecution which was to succor the many creeds of the Moguls, and to his statesmanship desires to conciliate the powerful Rajput tribes (Johannsen-Jarrett, Ali-Ahmed, Calcutta, 1879), his son and grandson were too indifferent to religious questions, and too dependent upon the support of their Rajput allies to engage in a crusade against Hinduism. This was not until the accession of the Purana monarchs, Anonymous, the recognition of the Hindu temples, such as that of Kedara Deva at Mathura (a.p. 1668), that of Delhi at Belundur (a.p. 1668), and the Jarni's monarchy in the Christian times. It is not too much to say that every great movement was a result of earlier movements of the old faith of Hinduism, such as that of the Qutb Minar at Delhi, the Jarni's monarchy in the Christian times. It is not too much to say that every great movement was a result of earlier movements of the old faith of Hinduism, such as that of the Qutb Minar at Delhi, under the Jarni's monarchy. But the Muhammadan dynasties of S. India were more tolerant, and the religious rules lived on good terms with the Mahrattas and the Deccan. But it is possible to exaggerate the destructive effect upon Hinduism of the Muhammadan invasions. Persecution and the competition of the new creed stimulated religious activity among the Hindus, and during the Muhammadan period various spiritual teachers arose. New sects were formed, and theological controversy divided the intellectual classes—a revival to which the early Muhammadan rulers seem to have been generally indifferent (Loyalty, Holy or False, No. 86, p. 729). The numerous conversions to Islam were not so much the fruit of active persecution as the result of a desire to gain the favour of the Court, or of missionary teaching (T. W. Arnold, The Preaching of Islam, London, 1896, p. 208 f.). It is also significant that at the present day the proportion of Muhammadans is comparatively small in the neighbourhood of the chief centres of Mogul power—Delhi, Agra, and the cities in the Bengal Delta. The explanation is that, in the neighbourhood of the great Hindu and Buddhist cities of S. India, Islam was confronted by the powerful Rajput tribes, devoted to their ancestral faith, and offering strong resistance to proselytism, in which they were supported by the great Hindu and Buddhist princes. In E. Bengal the assimilating tribes had imbibed little of the tenets of Hinduism, and were ripe for the missionary agents of Islam. Hinduism would have collapsed during the reign of Aurangzeb had it not been protected by the Rajput and Marathas, outside Rajputs and the Danarajputs the land. The strength and influence of Buddhism collapsed when its monasteries were burnt and its monks slain. But Hinduism possessed no single administrative body, no centre of religious life, the destruction of which might have involved a general collapse. It survived because it depended upon its caste and tribal organization; because in it represented the basis of social life, with its perpetual round of ceremonial observances; because it possessed a great and indefatigable religious literature. 39. The influence of Islam on Hinduism and of Hinduism on Islam.—The contact of these two great religions profoundly affected the evolution of both.

The pure monotheism of Islam, which became the State religion of N. India, could not fail to exercise influence on Hinduism. At this time, also, Christian and Jewish teaching began to affect Hinduism. It is significant that the Saiva and Vaishnav missionaries came from the S. and W. of the Peninsula, where Arab, Jewish, and Christian communities first settled; and Islam in S. India has adopted many Hindu practices—worship of local deities, the black art and divination, rites of birth and marriage (Census Report Madras, 1912, l. 54). Some are inclined to believe that the theory of fervent faith in the Godhead was derived from Islam. It is certain that these ideas derived from the indigenous Animism, Islam came fitted to enter upon the task, which it still pursues, of establishing itself as the national religion. To forestall the progress of various religious movements, Hinduism was indebted for the effort to suppress the cults of the mythological and sectarian deities, and for the recognition of a single Divine Power, the Almighty Rule of One.
HINDUISM

abuses which contaminated Vaishnavism in its later stages. It also encouraged a more personal tone in the teaching of the reformers. The Saiva sects, which were differentiated more by distinctions of practice than of theology, as a rule, took impersonal titles. The Vaishnava sects, on the contrary, are known by terms derived from their ideology, and, as a necessary consequence, there is a constant tendency to exalt the founder to a position of divine or semi-divine authority, in which the worship of the Deity becomes of secondary importance.

Kabir (c. A.D. 1488-1518), one of the twelve disciples of Ramananda, has become one of the most prominent figures in the popular Hinduism of N. India. His career illustrates the eclecticism of Hinduism. His leaning towards Islam was no bar to his becoming a Hindu Bhakta, and his writings display a wonderful combination of beliefs drawn from Christianity, Khatsim and Vedantism (J.R.A.S., 1908, p. 245 ff.). The result of his attempt to fuse Hinduism with Islam is that in Bombay some of his followers describe themselves as Hindus, some as Mahomedans (Census Report, 1901, i. 61; cf. Census Report Pundits, 1912, p. 121 ff.). As in other religious movements in the same kind, his later followers have maintained the name of their founder. They now occupy a position between idolatry and monotheism, and some of them have added the ecstatically expressing cult of Ramananda to their adherence. Among the peculiarity of the present day Kabir retains his authority as a hymnist more than as a religious reformer. His racy religious and moral aphorisms are constantly on the lips of the middle-class Hindus. They incite a pure and tender morality which has strongly affected popular feeling. Many of his writings the Xal-granth, the scripture of the Sikhs, are largely based on. (See KABIR: G. A. Grierson, Modern Vernacular Literature of Hindustan, Calcutta, 1880, p. 7 f.; G. H. Westcott, Kabir and the Kabir-Panth, London, 1908; Macauliffe, The Sikh Religion, vol. 122 E.)

31. Vaishnavism in Bengal.—Another side of the Neo-Vaishnavism is shown in the teaching of Mirza Ismail, a prophet who was born about A.D. 1500, and preached the doctrine of fervent faith in Krishna in its most ecstatic form (Grierson, 12; Macauliffe, vol. 349 ff.; H. H. Wilson, i. 189 ff.). This form of mysticism found a communal soil in the Bengal Delta, among an emotional race little affected by Aryan influence, and steeped in Animism.

The leader of the sect Chaitanya, born two years after Luther (A.D. 1484-1527), he taught the sufficiency of faith in the divine Krishna and his consort Radha; and the only form of worship prescribed was the repetition of the name of the Deity without any concomitant feeling of genuine devotion. This creed naturally found acceptance among the people of Bengal, who, still retaining some leaning towards Buddhism, were depressed by the results of long-continued social disorder, and had no alternative but to accept either Saktism or Anismism. The stress laid by Chaitanya on ecstatic devotion towards Krishna and Radha had encouraged sensuality, and the Baikhti Vaishnavas of Bengal have acquired such an evil reputation that Vaishnavi, the title of the female members of the order, has become synonymous with courtesan (Wine, Notes on the Bengali Courts, and Temples of E. Bengal, 1853, pp. 154, 165). For Chaitanya and the Vaishnavas of Bengal, see Calcutta Review, xv. (1851) 189 ff.; E. A. Cott, Census Report Bengal, 1901, i. 182 ff. Another characteristic of the order is its aversion to the use of animal food, and its reverence of the father of his flock, the essence of this type of modern Vaishnavism; and the worship done to him differs in no way from that addressed to the Godhead (see E.E. ii. 548).

Respect for these ideas is not a modern feature, for it was inculcated by Manu (ll. 130, iv. 251 f., and l. 1. ix. 235 E.). Such reverence, however, when paid by the pupil, ceased on the completion of the term of religious training.

'From the twelfth century, on the contrary, the founder rises to the rank of Buddha or Jesus; he becomes what the Prophet or the Imam are for the Moslem, a revelator, a supernatural saviour. He is confounded with the god of whom he is an incarnation. Like him, he is entitled to adoration (devotion) and if the soul attaches to a traditional hierarchy, his successors share more or less in the same privileges. Ramanuja, Ramanandasa, Annakuta, Bhakta, and many others who established trans-ordinate divisions, or who have been distinguished saints or poets, were from an early date regarded as Arakas (incarnations) of the deity' (Haris, 329).

The same pretensions are now displayed by some of the Dharma gurus, and, in particular, by those of the Vallabha sect, whose headquarters are at Gokul (q.v.). Similar claims made by the Saiva gurus in Madras are fully described by Dubois (p. 152 f.). In more recent times their authority has much decreased.

The great herearch, Vallabha, a Brahman from S. India, was born in A.D. 1478; gained his first triumphs as a disputant, had visited all the holy places in N. India; and at Brindaban (q.v.) saw Krishna in a vision, who directed him to establish a cult of Bhagavata, or Balgopal, the god in the form of a boy owlshead, which is the form of worship still most popular among the members of the sect. This cult seems to have been later in date than that of Krishna as a hero, from which it appears to have developed (J. Kennedy, J.R.A.S., 1907, p. 975 ff.). In his later years Vallabha showed ascetic life, married, became the father of sons, died at Benares A.D. 1531. His followers are the Epi- cures of the East, and frankly avow their belief that the ideal life consists in solitude and self-mortification. The doctrine of the sect which has specially aroused popular resentment is the declaration of the gurus, with the corollary that his devotees, in body, soul, and substance (sam, san, dham), are at his disposal, this rule being enforced specially in the case of the female votaries. The sect is found in the largest numbers at Gokil and in the commercial cities of W. India. At Bombay the immorality of their leader, the Mahakavi, was exposed during a famous trial in 1801 (Karnanada Muktii, Hist. of the Sect of the Maharajas in W. India, London, 1856; B.G. ix. pt. i. p. 556 f.; Census Report Baroda, 1913, l. 77 f.). The same criticism applies to another sect of wandering beggars in W. India, known as Manbhav (Sktr. mahabhavade, 're- spectcd'); and this evil reputation is enhanced by the contempt in which they are held by the Brah- mans who serve the orthodox gods (B.G. xiii. pt. i. p. 196, xvii. 181 ff.; art. CHITRAVATI [Indians]).

32. The Saktas.—This licentious type of Hinduism appears still more clearly in the form of Saktism, the worship of the active female principle (prakriti) as manifested in one or other of the forms of the goddess Siva—Kali, Devi, Parvati, and many others. The general character of this, the most debased side of Hinduism, is fairly well known; but comparatively little study has been devoted to it by European scholars, and the sordid under which its rites are celebrated ensures that its mysteries are revealed to none but the initiated. It is believed that the Saktas, or followers of the family of Lord Siva, are older than the age of the Buddha (J.R.A.S., 1904, p. 557); but in its present form it seems to have been popularized among the senseless population of Assam and E. Bengal about the 9th cent. A.D.
On the one hand, it has been supplied with a philosophical justification, being a popularised version of the Sankhya principle of the union of the soul of the universe (purusa) with the primordial essence (prakriti). By being self-existent Being as not only single, solitary, and impersonal, but also quiescent and inactive. Once it is conceived of as a personal principle, it acts through the associated female principle which, again, is conceived to be possessed of a higher degree of activity and personality. Combined with this is a literal and misconceived interpretation of various passages in the Veda, in which the will and power to create the universe are represented as originating from a greater, as coeternal with Him, and as part of Himself. On this theory, the belief is more closely connected with Saivism than with any other religious system, originating in philosophical Brahmanism, and tracing back its history through Brahmanism to the earliest Vedic conceptions (Monier-Williams, 186 f.; H. H. Wilson, 324 f.; Waddell, *Buddhism of Tibet*, p. 109 f.).

On the other hand, Saktism has a second and less reputable side, and this is more present to the majority of its adherents. Among its more popular local speculations and reminiscences of Vedic doctrines. The impersonation of the female energy in the form of Mother Earth appears among the non-Aryan tribes in the cult of the village-goddess (gāndācakṣa), some of whom are purely local or tribal, while others, like Kali or Marīyamma, though they retain some local characteristics, have become national deities. Even in the Veda, Pṛthivī appears as a kindly guardian-deity (Macdonell, *Vedic Myth.*, 88) but with her, by a process of syncretism, has been associated the non-Aryan Mother-cult, which has been described in the art. *Dravidians.*

The progress of this syncretism is indicated in various ways. In the Pāñcāla cave-temple, for instance, Pṛthivī is identified with Bhūmi-devi, or Hiti-devi, the Earth-Mother of the non-Aryan goddess of patience and endurance, who is Manu and in the formal ritual of Brahmanism receives special adoration (Ferguson-Burgess, 409; Manu, iii. 85 f., ix. 311; Colebrooke, *Essays*, 1856, p. 85). In one of the S. Indian temples, again, Devī appears in the form of a female image in stone, in which the head alone is visible, while the body is still concealed in the earth (Oppert, *Orig. Indol.* 488). The same other appears in Buddhist art, where she rises under the feet of the horse of the Master (Ortwein, *Buddhist Art in India*, 98 f.); and in the *Buddha Representations of the goddesses* (Farnell), iii. 29, 27, 52, 216, 223 f., 296, v. 349 f.; J. H. Harrison, *Proleg. to the Study of Gr. Rel.*, Cambridge, 1903, p. 275 f.). In its benevolent manifestation the cult of the Earth-goddess is shown in that of the Ranjīt Gaurī, 'the brilliant one,' whose annual marriage to Śiva or Siva is intended, by a sort of mimetic magic, to stimulate the growth of the young corn (Tod, *Annals of Rajastān*, Calcutta reprinted, 1884, i. 602 f.; Fraser, *Bod. Anth., Attis, Orissia*, 199 f.). In other cases manifestations she is known as Sākambhī, 'herb-nourisher,' or Sākṣaṭkāra, 'she who fulfills desire' (*BO* i. pt. i. p. 158, xxiii. 679 f.; Atkinson, *Himalayan Gaz.* ii. 325; Tod, i. 67). But, besides these benevolent manifestations, she exhibits more of the non-Aryan feeling when she displays her chthonic and malignant nature. Cults of this class are especially common in S. India. The temple of Marīyamma in Tiruvannamalai, mother of all,' who is the Bhūmi, includes animal-sacrifice, and the brutal rite of hook-swinging, intended as a mimetic charm to promote vegetation, the plant springing as the victim rises in the air; Marīyamma, 'plague mother,' at whose shrine an officiant known as Potrās, 'ox king,' tears open the throat of a living ram and offers a mouthful of the bleeding flesh to the goddess, as in the frenzied offerings of human savages. A feature of the Dīnysian ritual (*COS* v. 156, 166); or Pābhāri, the Tamil form of the Skt. Viśāhī, 'poison-remover,' a passionate incarnation of the goddess, was a woman of both mind and body, and on her head a burning flame; when drought or murrain prevails, she is propitiated with fire-sacrifice and the slaying of a bull; lambs are slain in the route of her procession, and the blood, mixed with wine, is flung into the air to propitiate the powers of evil (*Bull. Madr. Mus.* iii. 190; Oppert, *Oldfield*, i. 341 f.). The cults of these goddesses have recently been carefully investigated by H. Whitehead, bishop of Madras (*Bull. Madr. Mus.*, 1917 f.; cf. Gopal Panikkar, *Mālapura and Its People*, Madras, 1916, p. 129 f.; Dubois, 286 f.).

From deities of this class the transition to the orthodox cults of Kali and Devi, shorn though they may have been of some of their brutality and licence, is easy. A modern orthodox Hindu, however, traces goddess-worship to the Veda, and denies its origin in the Earth cults (*Commentary on Panjūli*, 1912, i. 114 f.).

Devi still retains much of her chthonic character, as when she manifests herself as Vindhyavāsī, the presiding deity of the present-day Vindhya range, or as the Saptātri Devī of Sāgaragad in the Kolāna district of Bombay, who have their homes in caves, and represent the original aniconic cult of the vague, directionless, and wandering tribes; or when, as in the Panjūli, she is manifested in a young girl, who performs mimetic magic to foster the growth of crops; or when, as in Nepal, in the form of Kumārī, 'the maid,' she is accompanied by boys representing Gopēśa and Mahākālī (Siva) in his malignant form (*Commentary on Panjūli*, 1912, i. 114 f.).

Vindhyavāsī seems to be a non-Aryan goddess imported into Hinduism, and identified with the Vindhyavāsī Kali, (see *ΕΕΕ* v. 117 f.). She does not appear, at least by name, in the early Vedic or Brahmanic literature, though there are several prototypes from which she may have been developed, and it is believed that her identification with Kali took place about the 7th cent. of our era. (*JEAS*, 1865, p. 36) By birth she has been connected with Nīrīti, the Vedic goddess of evil—which would account for the malignity of her character (see *Brahmanas*, vol. ii. p. 813). When she appears seated on a lion, she represents a well-known Oriental type, indicating that these deities were originally indistinguishable from the beasts, and that the complete separation of the bestial from the human or divine shape was a consequence of that growth of knowledge and of power which led man in time to respect himself more and the brute less (*Fraser, *Achāśi*, 107).
them being Kshatriyā, the embodied curse of the spirit (A. K. Forbes, Reśa Mārga, 193; BG vii. 1894, 643). In Madras also many of the Mothers are of human origin; Gaṅgāmā was a Brahman woman who, after the death of her husband, constructed a famous tank (Cox-Stuart, Manual of N. Arūṭi, Madras, 1896, i. 180). Such worship religiously and sociologically, is exemplified by the Sayyid Aslan the Muslim who, at the command of his master, cut off his head and held it in his hand, as is related by Anbālah Bhāvanī of Gujarāt, who is propitiated by animal-sacrifice and offerings of spirituous liquor, her image being a block of stone rudely hewn into the semblance of a human face (ED. v. 423 f., ix. pt. i. Intro. xxxv f.; for Mother-worship, see Monier-Williams, Brāhmaṇam and Brāhinsūm, 222 f.)). The cult may be compared with that of at Śrī parturi at Enningam in Sicily, which Cicero calls ‘augustissimum et religiosissimum fanum’ (in Vers. iv. 44, v. 79), and the Dūrūṭ al-Būrū of the Kāθūrīs in Hindustān; it is also practised in Assam and Bengal that the cultus appears in its most popular form (see ERE ii. 134*, 491 f.). Here the old savage beliefs, temporarily submerged, but not extinguished by Buddhism, assume a new development. The cultus is believed to have originated at Kāṃrūp in Assam, and may be older than the preaching of Buddha (Census Report Assam, 1891, i. 90, 1901, l. 39 f.; JRAS, 1904, p. 557). The goddess reveals her blood sacrifice, and satisfies the desires of her votaries for a diet of meat by permitting the use of the flesh of the animals sacrificed (Wilkins, Modern Hinduism, 1887, p. 168). In one Assamese form, Kāṃkā, ‘goddess of desire,’ ‘the most abominable rites are practised, and the sacred animal upon which it is scarcely possible to suppose the human mind could be capable of deviating; and up to quite recent times these were accompanied by human sacrifice’ (Census Report Assam, 1891, i. 38 f.; ERE ii. 134 f.). Human sacrifice, though it appears in the legend of Hiranyakṣiṣū, is not a characteristic of the Vedic religion, and was probably derived from some non-Aryan cult. In former times human victims were immolated at shrines of Kāthī in Assam; when the temple of Kāthī was raised in A.D. 1568, the brahman consecrated it with numerous human sacrifices, the heads of the victims being offered to the goddess on copper plates; similar sacrifices were frequently offered at the copper temple at Sādāyā, and at Bālotalā in Kāṃrup; it was owing to the seizure of four British subjects for this atrocious purpose that the Bāja of Jainti was deposed in 1853 (Census Report, 1891, i. 80). In Bengal, again, the worship of Durgā is accompanied by wearisome purifications and gross idolatry (Pratisākshanda Gāndha, Durgā, and Vedic and Hindūrātav, Calcutta, 1971). The cult of Kāthī-Devi is also associated with the horrors of Thāgi (E. Thornton, Hindūs and Thāgas of India, London, 1837; W. H. Sleeman, Ramakātana: Vocabulary of the Peculiar Language used by the Thāgas, Calcutta, 1838; Report on the Depredations committed with the Thāg Cages, Calcutta, 1840).

34. Later developments of Hinduism.—The modern development of Hinduism aims at the reconstruction of the faith in order to adapt it to new conditions. On the one hand, it proposes to reconcile it with the social uprising of the more depressed classes resulting from the imperial reign of British law; on the other, to meet the requirements of the educated classes who have to some extent assimilated the results of Western thought. (D. G. Howson, A History of Hinduism, p. 10.) Hinduism, in fact, has for several centuries been using the general use of English, like that of Greek under the Roman Empire, or of Latin in the Middle Ages, tends to form a bond of union, and results in the growth of a feeling of common nationality among

the diverse races of the Peninsula. The first movement is illustrated by the growth of sects founded on social revolt; the second by those which seek to reconcile the faith with European philosophy, materialism, or agnosticism, and which seem usually to reject the more objectionable dogmas and practices of Hinduism, and to substitute for them the ancient deities in new forms, as in the case of the Parsees, or the Theosophists, or the Sāṁjñā (see H. G. Wells, The History of Civilization, 1904, p. 366). The climax of this movement is reached in the Amritsār sect of Sikhism, of which the chief object is to propagate the tenets of the Tāhāqīn, which encourages the growth of unitarian beliefs, and by the ascetic preaching of Kabir and his followers. It was originally an attempt at religious reform, and, in process of time, assuming the character of a political organization. Founded by Guru Nānāk (A.D. 1469-1539), it was in the beginning agnostic, and its successors, notably by Guru Gobind Singh (A.D. 1675-1708), the credence in its strictest form enjoin the belief in a single God, condemns the worship of other deities, idolatry, and the great shrines of Hinduism, faith in omens, charms, and witchcraft; and does not recognize ceremonial impurity at birth or death. As a social system it aimed at abolishing caste distinctions, and, as a necessary consequence, Brahmā́nical supremacy and ordinances, in all family rites. But this ideal system is accepted by few, and there is a growing tendency, now strongly resisted by its leaders, to conform more closely to official Hinduism (see Macauliffe, The Sikh Religion). Recent investigations show the difficulty of assigning an exact date to the foundation of Hinduism (Census Report Panjab, 1912, l. 184 ff.). In more recent times a similar movement has been started among the depressed castes, who resent the contempt in which they are held by the punctilious high-caste organizations, particularly in S. India. Thus the Pariah of Madras have founded an organization of their own, and now assert claims to privileges from which in former times they were rigidly excluded. This movement has caused considerable alarm among some of the leaders of Hindu society, who have attempted to expel the position of these outcasts is seriously considered, there is a risk that they may, in despair, adopt Christianity, as many of them have already done (for recent efforts to relieve the so-called ‘untouchables,’ see Census Report Baroda, 1912, l. 205; Madras, 1912, l. 161 f.). In the same way the Satnāms (p.s.) of the Central Provinces have revolted against Brahmā́n domination, and are divided into rival groups, one of which refuses intermarriage with the other, and has adopted a rival which admits some of the fouler practices of the Vaiśavas and Śaktas sects (Census Report Central Provinces, 1901, l. 90).

(b) Sects aiming at the reconstruction of Hinduism.—This movement owes much of its inspiration to the translations of the Hindu sacred books into English, which now, in this form, appeal to a wider educated public. The results of the Brāhmaṇa Sāṁjñā (see ERE ii. 813 ff.) have not been encouraging.

Many who are really Brahmos, other than those of the Śvāmārak Brahma Sāṁjñā sect, prefer to describe themselves as Hindus; and so far as outward appearances go, the present-day tendency amongst the educated classes of Hindus, the Brāhmaṇs alone the (Brahmo) sect . . . is likely to appeal, is towards agnosticism or indifferentism, matter (material), and Hinduism has no special attractions for them when orthodox Hinduism allows them all the latitude they need (Census Report India, 1901, l. 253; Bengal, l. 189). Its most important innovation has been the establishment of public and Government schools and the spread of English, the medium of instruction in these schools is hitherto unknown in India (see ERE ii. 813 ff.). The Arya Sāṁjñā, which repudiates idolatry and in a large measure ignores the sectarian deities, studies Christianity chiefly in the works of its
opponents, adopts toward it the attitude of hostility rather than sectadism, and depends mainly for its influence on the sympathy of the advanced political parties in India (see Bee ii. 57).

35. The new Vedantism.—Some attention, particularly in America, has been directed to the new development of the old Vedantism taught by Sthri Ramanan, Paramahamsa, and expanded by his disciple Swami Vivekananda.

He thus delivers the message of his master: "Do not care for doctrines, do not care for dogmas, or sects, or churches, or temples; you count for little compared with the essence of existence in each man which is spirituality, and the more that this is developed in a man, the more powerful he is for good (Speeches and Writings of Swami Vivekananda, Madras, u. s. (1899), p. 21). He denies the existence of polytheism in India. "In every temple, if one stands by and listens, one will find the worshippers apply all the attributes of God—inclining his semblance—correspondence—to the images. This is not Polytheism" (ch. 43). The earnest worshipper before an idol recognizes in it a necessary stage of his life. "The child is father of the man."

Would it be right for the old man to say that childhood is a sin or youth a sin? Nor is image-worship compulsory in Hinduism (ch. 43). His ideal religion is what we call in India Yoga, union between God and man, union between the lower self and the higher self. To the worker it is union between man and the will of humanity to the mystic, between the lower and the higher self; to the lover, union between him and the God of love; and to the philosopher it is union in all existence (ch. 96). The greatest, most touching, as it is most pleasing, as it is most inspiring, is the one scripture the teaching of which is in entire harmony with the results which have been obtained by the modern scientific investigations of the external universe. As a result of our modern reforms; movements have been made for giving imitations of Western means and methods of work, and the future will not for India (ch. 48)."

The most horrific ceremonies, the most horrible of all the ceremonies that human hands ever wrote, or the human brain ever conceived, are the most bestial forms that ever passed under the name of religion, have all been the creations of degraded Buddhism (ch. 504)."

"My idea is the conquest of the whole world by the Hindu race (ch. 528); in Hamsaka, as in general, Max Muller, Edwarkhala, his Life and Sayings, London, 1890)."

36. Theosophical Hinduism.—Another movement, having as its object the reconciliation of Hinduism with the most advanced forms of thought, may be called Theosophical Hinduism, which has its centre at the Central Hindu College, Benares, under the guidance of Mrs. A. Besant.

Theระบบจึงไม่สามารถนำข้อมูลที่อยู่ในภาพเข้าสู่ภาษาอังกฤษได้.

37. Hindu eclecticism.—This summary account of Hindu sectarianism may tend to exaggerate its extent. It would be a mistake to suppose that the faith is divided into so many water-tight compartments between which communication is impossible. The position of the advanced Hindus on the question of sectarianism has been defined as follows:

"The attitudes of an educated Hindu towards the question of doctrine and worship is this: What God is God is not entirely knowable, as it is an infinite conception. Of this infinite conception some are all power, some are all knowledge, some are all action. Of what is infinite knowledge, of what is infinite action, of what is infinite action the student becomes acquainted. All worship, therefore, should be tolerated. Any deity may constitute a sect for the worship of the deity of his own sect. The infinite conception becomes widened. It is not only necessary to replace one deity of the other, but to replace one sect of the other. There is no need of importance whether the absolute and infinite conception is called Brahman, Vishnu, Shiva, Dakshinamurthi, or Mahadeva. Such a conception is the Sun, Jupiter, or Saturn, or any historical great hero, or a saint, or a river like the Ganges, or any other object that inspires awe or creates feelings in the human mind. None of these gods or goddesses are but starting-points. To disturb the faith of a man in a finite God is foolish as long as the human mind is not fitted to accept the higher" (Shridhar V. Raskar, 182).

While the Saktas are more distinctly separated from Saivites and Vaishnavas, these two are, in the view taken by most Hindus, complementary rather than antagonistic. Both appeal to the Puranas as their Scripture; members of one sect may reverence the delities of another. Thus in some places Haribara (Vishnu-Siva) is worshipped (Rice, Mysores and Coor from the Inscriptions, 206). In Malabar we find "none of the strict adherents of worshipers of Vishnu and Siva, or, indeed, between any of the forms of the deity, whether venerated as gods or goddesses, which are to be seen elsewhere in India, being divided or secting or thinking up and dwelling on differences among the people. People generally do not, as a rule, give much regard to such differentiation. The Nambotiris do, but by no means to such an extent as one sees, for example, in the differences among the Vaishnavas. The people are divided into two sects, each hating the other with the most bitter enmity (Bull. Madr. Mus. iii. 79; cf. Census..."

709

Representing Viṣṇu, and a pair of phallic emblems of Śiva and his consort; when he goes on pilgrimage to sacred places, he offers worship to the Saiva and to the Viṣṇu images (Yogendra Nath Bhattacharya, Hindu Castes and Sects, Calcutta, 1896, p. 364). In Bombay every Brāhmaṇ household worships a strict form of the Śiva Deity. In the image of Śiva, as well as in the image of Viṣṇu, there is an amanī (or in a picture); a metal image of the Śakti, or Mother-goddess; Gaṇapati, or Gaṇapati, god of luck and wisdom; Surya, the Sun, or Hanuman, the sacred monkey (BG II. pt. i. Intro. p. xxviii). In the temple of the Mādhavachārya sect in the Baroda State are found images of Śiva (I. G. x. 125 f.). Beside those of Viṣṇu and his consort, the explanation given by members of the sect being that the founder, originally a worshipper of Śiva, afterwards adopted the cult of Viṣṇu (Census Report, Baroda, 1901, l. 157 f.). In this State any hostility towards adherents of rival sects is not felt by the population at large, but by the leaders and inner circle of devotees (id., 1912, j. 74).

The continuity of religious life is exemplified by the successive occupation of the sacred sites by various forms of religion. Benares and Mathura, which are centres respectively of Buddhism and Jainism, the former being at present devoted chiefly to the cult of Viṣṇu, the latter to Viṣṇu in the form of Kṛṣṇa. At Śaktri Sārva, a village in the same range, Hindus perform their rites of prayer and absolution. Śikh venerate a shrine of Nanak, Muḥammad the tomb of a Muḥammadian saint (I. G. x. 390). Nālī and Wāt, both at the present day, are centres of Hinduism, have lines of Buddhist caves (Fergusson-Burgess, 285 ff., 211). In Kāsmir, in spite of the nominal conversion of the population to Islam, their shrines stand on the sites of the holy places of the Hindus, and receive a veneration not accorded to the modern mosques and their Muḥammadians. Though Hinduism is eminently ecstatic and tolerant, disputes between rival sectarians, ending in bloodshed, are not uncommon. Serious riots between rival bands of ascetics have occurred (I. G. x. 744, 441). In the same way, Benares, a Saiva stronghold, is a museum of cults associated with other gods (Sherring, Sacred City, 63, 120, 130, 172). The shrine of Śiva, as Mahākāla, at Kāthigāra (g.v.) is visited by all sects and by all ranks of the people, from the Hindu Gorkhi king and his relations, the finest Buddhist devout: Bāhūras, or Buddhist priests, officiate at Hindu celebrations, and Hindus regard the Buddhist deities as eminent saints (Oldfield, II. 285 f.). The association of the cult of Śiva and his consort with that of Viṣṇu at the temple of Jagannāth, a chief seat of Viṣṇu worship, is specially noteworthy (Hunt, Orissa, 130). In Ceylon, Budhais continue to worship many of the Hindu gods (Hardy, Eastern Monachism, 201; cf. Waddell, Buddhism of Tibet, 232). Pr. and W. Pr. many Christian shrines command respect from Hindus, and in a less degree from Muḥammadians (BG xii. pt. i. p. 209; N. Manuṣṭ, Storia del Mogor, London, 1861, II. 248; I. G. x. 167). In the N.W. Frontier Province the predominance of Islam has seriously influenced the local Hinduism (Census Report, 1915, i. 93). Hindus and Muḥammadians worship at the shrine of the Virgin Mary at Cochin, and the bust of a well-known missionary at Madras was recently associated with the image of Sararvati at a Hindu religious rite (Thurston, Religion of the Hindus and Buddhists, 1909, Khwarā, no. 114, p. 6). On the other hand, many groups of Christian converts retain Hindu beliefs (Census Report Cochin, 1901, 1. 59 f.). In N. India Śiva converts Brāhmaṇs, who keeps in his private house-charset an amanī

HINDUISM

39. The beliefs of the peasant classes.—The primitive animistic or pre-animistic beliefs (see § 7) have been to some extent obscured or modified by the predominant Brahmanism among the mental races of the plains, and in a less degree among the forest tribes. The Hindu villager, like the Jew at the period of the growth of Christianity (W. B. Cassel, The Land and Mental Religion, London, 1906, p. 57 f.), lives in an atmosphere peopled by spirits, generally malignant, capable of being repelled or conciliated by sacrifice, spells, incantations, amulets, and other magical or semi-magical means.

A belief in every kind of daemoniac influence has always been from the earliest times an essential ingredient in the religious thought. . . . Certainly no one who has ever been brought close contact with the Hindus in their own country can doubt the fact that the worship of at least ninety per cent. of the people of India in the present day is a worship of spirits' (Monsor-Williams, Brahmanism and Hinduism, 1910).

The Hindu villager has no conception of the reign of law in the natural world. The occurrence of miracles is a matter of daily observance. He appeals to the intercession of the半导神 of his own sect to the protection of his gods, because the latter have, in his belief, in a large measure lost touch with humanity, and no longer interest themselves in the petty details of his ordinary life (H. R. Fair, The Hindus as they are, Calcutta, 1881, p. 109).

The word, while the idol of Grämänsd Jaya-balgevard is being re-painted, the spirit of the deity is extracted and kept in a jar until the work is finished, when it is restored to its abode (W. M. Todd, Jat of Nepal, 127). The same idea, in a grosser form, appears in the degraded northern Buddhism, when internal organs made of dough or clay are inserted in the larger images; in those most highly valued, precious stones, filigree of the hollow metals, consecrated rice, scarfs containing the Buddhist creed, texts, and sacred relics are placed (W. S. Judd, Buddhism of Tibet, 259).

The luxuriance of modern idol-worship is best observed at the most important holy places.

In 1905, Sherring estimated that there were 444 temples in Benares; and this enumeration did not include the minor shrines and walk-niches, each containing one or more images, which are found everywhere in the streets. These inferior shrines were, on one occasion, by a curious contrivance discovered. A large number of the walls of the temples had been generally perceived. Bâk Mân Bith of Jeypoor, wishing to present his divinity to the temple at Jeypoor, made the stipulation that they were all to be commenced and finished in the same year. In the course of one night he set fire in blocks of stone a great many tin carvings, each one representing a temple. The separate blocks, on the work being completed, were sold off to, or, on all sides, a mass of minute temples. These blocks are still to be seen in various parts of Benares. . . . In regard to the number of idols of every description actually worshiped by the people, it is generally exceeded the number of people themselves, 40,000,000. . . . However, in the case of the Ganges, it is the river of life, and may be many more' (Sacred City, 43 f.)....
one of the incarnations of Viṣṇu when he feels pious and religious. The religious wants of these people are sufficiently provided for by an occasional visit to a sacred river or place of pilgrimage, where he bathes, visits the chief temples, and feeds a Brah- 
man. He goes to the propitiations of his deceased ancestors; to attendance at village or local festi-
vals, where the religious service is only an adjunct to trade or amusement. There is little or no domes-
tic worship save the rites at birth, marriage, and death, the first two being discharged by his family chaplain (purohita), the third by some degraded Brahman or a saivite or a funeral priest. Occasionally a pious man hires a Brahman and invites his 
friends to attend a recitation (kathā) of one of the sectarial Scriptures. Such rites involve consider-
able expense, which the thrifty want, and want as far as they can consistently with the desire to con-
ciliate his gods and escape the contempt of his neighbours. Among the trading classes it is the cus-
tom at the close of life to devote considerable sums to the erection of a temple in their native village or at some sacred place. The peasant may thus seem to be lax in the discharge of his religious duties. But this is not actually the case, because all his ordinary social rites are performed from a motive which to him is religious, that is to say, in obedience to the laws of his caste, or because they belong to the community or the social group to which he belongs. It may be said that there are few races among whom religion, as they conceive it, forms a larger part of their daily life. In the eastern Punjab he has practically no belief in the transmigration of souls, but he has a vague hope that there is a future life, in which those who are good in this world will be happy, even if the viole-
ance of the laws of his caste, or because they belong to the community or the social group to which he belongs. It may be said that there are few races among whom religion, as they conceive it, forms a larger part of their daily life. In the eastern Punjab he has practically no belief in the transmigration of souls, but he has a vague hope that there is a future life, in which those who are good in this world will be happy, even if the viole-

In Gujarāt, as the peasant wakes, he utters the name of his patron deity, Mahādeva or Śiva, Thakurji or Viṣṇu, Aīmbākavant the Mother-
goddess, or to some little deity. In Gujerāt he recite the verse: I call to mind in the morning the Lord of deities, the Destroyer of the fear of death! If he is a layman under a special vow, he davacayata; if his patron deity be Śiva, a verse from some vernacular poet, or medi-
tates upon his attributes and perfections. If he is a Brahman of high caste, he always behaves, 
invokes the sun, and pours water in his name, and, 
thrusting his right hand into an ornamented bag, known as the ‘cow’s mouth’ (gajasvātha), he runs 
over his rosary, repeating the ancient Gāyatrī, or prayer to the sun. His house oratory contains images of Bālmukunda or the infant Kṛṣṇa, the deity amonoon representing Viṣṇu, guqures of Śiva, Ganesa, Durgā-Devi, Kāli, Śiva the sun-god, Hanumān the monkey-god, and others, thus show-
ing the extreme eclecticism of his beliefs. These he washes, dresses, worships, and adorns with flowers and other offerings, and, if truly pious, he performs the six rites of worship, including all modes of service to the deities, and ending with the circum-
ambulation of the images and procession of praise (Forbes, Rāj Māla, pp. 522 ff., 586 ff.).

In Berar the peasant is both a polytheist and a monotheist, believing in Viṣṇu, God, to whom the others are subordinate. His special deities are the village Māruti or the monkey-god that is the 
village guardian, and his family tutelary deities. His

chief religious duty is to make pilgrimages, but these are not compulsory. A thousand or more deities are regarded as sacred. He is tolerant, regarding every 
religion as true and good for him who is born to it.

He believes that a very strict account has been kept of his good and bad actions; and that he is as sure of getting his reward as his punishment, very often in this world, but certainly after death. His belief in a region beyond the grave is very firm. There he will meet with his deities and, after enjpying 
the bliss of heaven or enduring the torments of purgatory, he will be sent back to this world in the incarnation of a man or a beast, according as he has made good or bad use of his time in this life (Comenius Report Bihar, 1901, l 644).

For similar beliefs in Madras, see J. E. Padfield, The Hindu at Home, 1896, ch. iii. and iv.; for Benga1, Comenius Report, 1901, l 186 ff.; for the Punjab, Ithiboten, Punjab Ethnography, ch. iv. 

40. The ethics of Hinduism.—The influence of Hinduism on life and character is a subject too wide to receive detailed treatment here, and it is perhaps best 
elsewhere discussed (E.E.B, v. 496 ff.). The supernatural beings of savage belief frequently 
display the utmost indifference to questions of worldly morality; and in the early stages of the 
evolution of public justice, the community inter-
feres only on supernatural grounds with actions which are regarded as endeavouring its own exist-
ence (Westermann, M.T. i. 61). A man is a 
house, Morals in Evolution, London, 1906, l 119). In other words, sin is regarded as a social or ritual 
offence, not as the desecration of the individual soul.

From the earliest period, it is true, sin was fully 
recognized, and its removal is stated to be the 
work of the gods; but the first mention of the 
public confession of sin is found in the Dharmasa-
stra (Hopkins, 42, 60, 55, 329). It was fully de-
veloped under the Bhāgavata monotheism (see 
E.E.B, vol. ii. p. 544) and of EXPLANATION AND 
ATTORNEY [Hindu], vol. v. 608 ff.). It is true 
that the official Hinduism of the sacred books 
(cannot be charged with indifference to moral ideals. Its sacred 
literature terms with reflections on the vanity of human life, 
the glory of renunciation, the necessity of good works, the duty 
of sympathy with all living things, the beauty of benevo-

lence, the hollowness of revenge, and the power of man to determine 
his own fate by right conduct. It appeals both to the intellect 
and to the emotions, and it derives a certain measure of support 
from the penalties imposed by the caste system' (Bisley, The 
People of India, 285).

Such is the official view of the Brahmanical 
teachers, who share with the lay members of the community a craving for moral guidance and 
programmes, and an incapacity for applying them in practical life. Much of this teaching is 
thus merely idealistic, and is beyond the com-
prehension and above the capacity of the average disciples. Much, again, of this official morality is 
open to criticism. Thus, though a regard for 
truth is taught in Hindu literature from the earli-
est period, Manu admits that false evidence of a 
man with a pious motive does not involve the loss of 
heaven (F. Max Müller, India, What can 1 teach you? 54 ff.; Manu, viii. 105, l. 119). At the same 
time, the lawgiver reprehends perjury in certain 
cases (Manu, viii. 97-101, xi. 67). On the other 
hand, the assertion of Dubois (p. 171) that 
neopaghtes, as a part of their training, are instructed 
in the art of lying, has no foundation, at the present 
time at least. A recent native writer remarks that 
the chief ethical defect in the Hindu Scriptures 
is that penance is regarded as an atonement for 
sin.

Frey, who believes that he will be washed of his 
sins by performing a penance or by giving din. He is 
who have proclaimed that pardon or even merit will be attained 
through their agency. . . . It leads to the monstrous belief that 
evil deeds, of whatever severity, can be atoned for and expiated 
by money' (Comenius Report Bihar, 1901, l. 138).

The belief, again, that morals depend not on 
religion, but on the relations of family, caste, or tribe, tends to produce dangerous results.
HINDUISM

He whispers into the ear of the acolyte the secret formula which is to be his guide during life, and he thus admits him into the society of the morally wicked. In after life the influence of such teachers is often valuable. In Bengal the gurus rank higher than in the Panjab or the United Provinces, where he seldom makes official progressions to the rats or disciples and inquire into questions of morals and caste discipline (Buchanan, Eastern India, London, 1838, ii. 751; Wilkins, 26 ff.). In S. India he is an important personage, vested with wide powers of control and discipline over the members of the sect of which he is the leader (Buchanan, Journey Through Mysore, London, 1807, i. 144 ff.; Nelson, Manual of Madura, Madras, 1885, p. 160 ff.; Dubois, 123 ff.).

41. The lack of organization in Hindism.

Hinduism thus provides a characteristic example of the primitive, unorganized polytheisms—an example probably unique among the races of the world. This is partly due to the peculiarities of the Eastern temperament, the devotion to mystical speculation, and the incapacity for political organization, which are obvious throughout the history of the Hindu people. It extends over an enormous area, inhabited by many races, all differing in origin, language, and character. The absence of any great and powerful Hindu empire, except under Akoka and Harsha, with a single capital city as a centre of religious and political life, prevented the consolidation of the local cults into a State religion, like that of Babylonia or Egypt. The condition of things has been often compared (as by Lyall, t. 156) with Gibbon’s account of the state of religion in the Roman Empire (Decline and Fall, ed. Smith, i. 195 ff.):

"The various modes of worship which prevailed in the Roman world were all considered by the people as equally true; by the philosophers as equally false; and by the magistrates as equally useful. Like the Brahman Vedantists, the devout polytheists, though feebly attached to his national worship, yet observed the polite but implicit faith in the different religions of the earth. Fear, gratitude, and curiosity, a dream or an error ... occasionally disposed him to multiply the articles of his belief, and to enlarge the list of his protectors. The modern sects resemble the ingenuous youth ... alike instructed in every school to reject and despise the religion of the multitude."

There is, again, a philosophic class who, "viewing with a smile of pity and indulgence the various errors of the vulgar, diligently professed the common ceremonies of their fathers, secretly preserved the mysteries of the gods. Lastly, the Anglo-Indian magistrates 'know and value the advantages of religion, as it is connected with civil government.'"

Hence Hinduism has never prepared a body of canonical Scriptures, and it has never had a General Council or Convocation; never defined the relations of the laity and clergy; never regulated the canonization of saints or their worship; never ordained a re-legal life, like Rome or Canterbury; never prescribed a course of training for its priests. This is not due to the fact that war, or civic turmoil, or foreign domination prevented the growth of institutions of this kind; but simply to the fact that all such action is essentially opposed to its spirit and traditions. Added to this is the prevailing tendency towards pessimism.

Lyall (ii. 80), writing under the guise of an orthodox Vedantist, says: 'The inwardmost religious idea of the Hindus has for ages been the supreme unimportance, if not the nothingness, of this particular stage of existence, and they have looked into a deep indifference for humanity at large, a feeling that is probably as much the product of their environment as are their marked skins and pig its appeal, and yet remain directly non-moral' (CGS v. 238; cf. F. B. Jevons, An Introduction to the Study of Comparative Religion, New York, 1906, p. 215 ff.).

In default of a well-defined religious sanction for morals, Hinduism has made the ordinary sinner responsible to the caste council for breaches of the moral or religious laws, interpreted by the elders of the castes. The only agency which really provides moral teaching is the guru, or religious preceptor.
Hinduism. 273

Hinduism is obviously confronted with serious difficulties, due to the spread of new beliefs and theological speculation. The most obvious problem is the position of the Roman Empire during the early centuries of our era, when the official paganism was assailed by Christianity, Neo-Platonism, and sundry foreign cults. Long after the 3d cent. of that paganism finally succumbed. In India the movement has already extended over a much longer period, and the process has been much more protracted. It is now some twenty centuries since the attack of Islam began, and Hinduism shows no obvious signs of weakness. It possesses wonderful powers of adaptation to novel conditions. It has held its ground for long ages against anarchy and persecution; it has proved victorious against the assault of Buddhism. If it yields, it yields not as slowly as Mahatma and Christianity. Even if in the present conflict it has to surrender much, it is possible that it may emerge from the struggle purified and reinvigorated. The question has been thus treated by A. C. Lyall:

'Taking things as they are now, and looking upon the actual state and movement of religions, it is evident that both Buddhism and Hinduism will go on, and will still be justified in affirming that this religion, although powerfully attacked by social and political changes, has come to look so natural and so sudden that they would try the constitution of any national creed, is nevertheless not yet dead, nor dying, nor even dangerously ill; and, moreover, that so far from making it a proscribed or a condemned religion, it converts more and more of the other Indian faiths. . . . Although polytheism still prevails in the crowded sparsely inhabited regions throughout the land, and although the Brahmanic system, deep-rooted and with a never-sleeping, still vigorous and vigorous, has its adherents, it may nevertheless venture to anticipate that the end of simple paganism is not far distant, that, in truth, it is powerless to attempt any kind of prevention as to the nature or bent of India's religious future, yet we may look forward to a wise and rapid transformation, in two or three generations, if England's rule only be as durable as it has every appearance of being. It seems possible that within the next two or three centuries the spirit of old gods and goddesses shall die in these new elements of intellectual light and air as surely as a net of fish lifted up out of the water; that the alteration in the religious needs of such an intellectual people as the Hindus, which will have been caused by a change in their circumstances, will make it impossible for them to find in their new world a place for their ancient deities. Their primitive forces will fade and disappear entirely, as a wind that vanished from Europe, and as all early modes of thought and symbolism become gradually changed; the result will be not that there is nothing new, but in India it is possible to go on with speed and intensity unprecedented' (Lyall, Asiatic Researches, i. 136, 87, 219).

Regarding this forecast, it may be urged that too little stress has been laid upon the numerical weakness of the educated or semi-educated classes, and upon the immobility and ignorance of the rural population; and that the possibility of the rise of some great religious teacher, a new Buddha or Shankara, has not been sufficiently considered. Another writer, N. Maseneol (RE VI. 1907) 63 ff., has discussed the same question from the standpoint of Christianity. He points out that

'...two features of Hinduism that have been emphasized as peculiarly characteristic of it, its lack of articulation as a system of belief, and its adaptability to new circumstances, have been possible to it because of another parallelism which is a main source of its strength and yet is likely to prove a fatal weakness. The danger of anarchy is avoided by reason of the fact that Hinduism is, at the same time, a fully organized and articulated social system. However frequently and completely the spiritual organism may change, the permanent department of caste carries on the government and maintains continuity. In this lies its strength to resist assaults upon the rationalism or the truth of its doctrinal tenets. However may the ward become as a system of truth, so long as it retains its authority as a social system it is unlikely to lose its power of survival. But in this lies a fundamental weakness, for those who were at the last war out even more the most imperious of all, that rests on privilege and prejudice; and if, by that time, the spiritual content of Hinduism has not found a better foundation, a one may perish with the other' (p. 96), . . . 'This religion is suffering, with a success that is certain to be increasing and enduring, to slowly be supplanting and to recover and revive the spiritual content of its ancient heritage' (p. 90). But he urges that 'an unthinking observer, whatever his political convictions, will deny that the main factor in producing the movement of thought and the reconstitution of beliefs is Christianity' (p. 97). He refers specially to the new Vedantism,
which has overshadowed the old Theistic churches, like the Brahmanism and Aryan faith. There are three main factors in securing Hinduism in the crisis which is now imminent. The first is the general acceptance of the system of caste, with the social duties which it confers, and the social duties which it enforces. This system, indefensible though in theory it may be, shows at present no signs of decadence. On the contrary, we find that those groups which possess claims to social respect are most tenacious in asserting and maintaining them; that those in the second rank, that is, below the 'twice-born' classes, are endeavouring to claim equality with them; and that even the depressed and despised races, like the Pariah of the South and the sweeper of the North, are anxiously seeking an escape from their present position, whose quite prepared to join the caste-system whenever its doors are open to them. The second force is the universal recognition of the power of karmas—a term which connotes much, but may be roughly explained as personified social law. The third is the influence of women: 'without their support, both Brahmanism and Hinduism would rapidly collapse'.

As regards the influence of foreign creeds, Islam wins adherents by its clear-cut monotheism, and its distinctive civilization, which, to a large extent, forms the convert drawn out of the lower ranks of society from the bondage of caste. Its religious ideals—action as opposed to hypnotic contemplation—its practical spirit which affects a single life only, and its deep and devout sentiment of paganism. Ghotese or barbarous religious symbols, even those tainted in their character with the impurity attaching to nature-worship, often brought off their bacter elements, and the deviation of a large portion of Hindu morality, and an higher conception of the divine, may have been the vehicles of a real religious emotion. What the worshipper will find in a worshipper depends greatly on what he brings.

LITERATURE.—Under the various articles dealing with the many phases of Hinduism a special bibliography is given and many of the more important books have been quoted throughout the article. Here it is necessary only to name those works which are of general survey of the subject or throw light on special topics.

2. TRANSLATIONS OF THE SACRED BOOKS OF THE EAST:—see esp. F. P. Max Muller, The Upamana; G. Buhler, Sacred Texts of the Arya, Institutions of Manu; J. Jolly, Yajur-Veda of Vajrasya; K. T. Tadung, Bhagavadgita; H. Jacob, Jaina Sutras; G. Thalban.
HINDLAIJ

HINDLAIJ (said to be derived from Skr. *hingula*, a preparation of mercury with sulphur, vermilion; possibly, on account of the smearing of a sacred stone with red pigment, a survival of a more primitive blood-sacrifice (Tylor, PC ii. 184).—One of the most famous places of pilgrimage in Baluchistan; situation in Lat. 31° 31' N., long. 65° 31' E., in British Mahratta, on the W. bank of the Hingol river, a few miles from its mouth. The place is specially interesting inasmuch as it is mainly a place of Hindu pilgrimage and the goddess extends. By Hindus it is held sacred to the goddess Pārvatī, Mātā, or Kāli, the mother-goddess in her malevolent form. The local legend tells that after the quarrel between Śiva and Dakṣa, Viṣṇu cut off in pieces the body of Umā, wife of Śiva, and that the crown, head, and feet were buried in the bed of the river (Gopātha Brāhmaṇa, Calcutta, 1872, p. 30 ff.; Ann.-Asi., tr. Blochmann and Jarrett, 1894, lii. 313). Like many other sacred places in the East, Hindlaij is venerated by other faiths. Muhammadans reverence it as the abode of Bi bi Nānī, the 'lady grandmother.' This title, as was suggested by Masoom (Narration of a Journey to Kailās, 1843, p. 801), may be identified with Nāne (RV Nāne), the mother-goddess, worshipped in Syria, Persia, and Armenia, and other parts of Asia, under the titles of Anāt, Amsa, Amsū, or Tana, the primordial Babylonian goddess Nāna, the Lady of the temple Ešana of her home Utaru (Erech) (HDB iii. 485; G. Maspero, Dawn of Civ., Eng. tr., London, 1896, p. 665 ff.; M. Jastrow, Z. v. Babel. Asypr., Boston, 1888, i. 51, 85, 90). Scholars are now beginning to admit that this is possibly a stratum of Babylonian culture underlying the early civilization of India, either ante- or possibly influencing, the Aryans or the Dravidian culture, or both. This view seems to be not unreasonable. The Tell el-Allarna records disclose an extension of Bab. culture in W. Asia as early as the 12th cent. B.C., and a wave of the same culture may well have passed eastward, particularly if, as Riceley (Census of India, 1901, l. 858 ff.) remarks, remains of buildings, irrigation networks, and terraced cultivation in the Indus valley in an early period—how early it is at present impossible to decide—Baluchistan, which now is largely inhabited by seminomadic tribes, is probably the cradle of this ancient civilization, and it seems possible that this condition of things must have existed from a very much earlier period.

This inaccessible shrine has been visited by few Europeans. The best account of it is that of Goldsmid, who explored it in 1881. Moving along the course of a stream bisecting the Hindlaij hill (3740 ft. high), he observed the place of sacrifice, a hollow in the hill smeared with the blood of animals sacrificed to the goddess, and the stones were decorated with sectarian marks (*ḥidak*) in a red pigment. From this place up to the temple itself was a procession of the stones under which flowed a stream of blood. About a quarter of a mile higher up the hill is the shrine itself, quite surrounded by mountain peaks. It is not a place of any architectural magnificence or beauty. It is the worst sort of a simple temple. The absence of an infantile taste for architecture would create out of wooden toy bricks. In its appearance and site it is in good scenic effect. It is the left, far deeper and more minute than the sacrifice hollow, is visible, surmounted by a long arch of pale sandstone, the so-called abode of Mart or Nānī, the presiding goddess of the place. It is a low castellated mud edifice with a rude wooden door. In the penetrations of the temple, we found the shrine of the goddess. Two diminutive domes, one at the head and the other at the foot of short, tomb-shaped mud erection, marked the chosen sanctum of this divinity of the Hindu pantheon. A wooden rail has been set at the foot and on the sides. This is, as is the case at the shrine at Pandharpur and at other places, seems to be intended to prevent access to the holy place. 'Some rods steeped in vermilion were placed near the wall at the back. These were intended for the use of pilgrims unprovided with the wand of office borne by their aparās or līḍesās.' The ritual
HISTORIOGRAPHY

directs that the worshipper should creep on all fours through a narrow entrance, and it is believed that no parallel is to be made with oring with grievous sin can accomplish this feat. There appears to be no image of the goddess; at least, nothing of the kind is noticed by travelers. Though the barren desert region, Hinglaj is surrounded by abundant verdure—the wild plum and various shrubs and flowering plants; one report states that near the Hinglaj [shrine] there is verdure enough to make glad the heart of a pilgrim even from Southern India. To the Panjabi it must be a verdant garden of Eden.

Bands of pilgrims from all parts of India, each conducted by a leader known as a aegout, make the journey by land from Karachi. Fees are collected at Miani by a Bakhri, or hereditary pilgrim overseen, from all except devotees and unmarried girls. The proceeds amount to about £40 annually. On the return of the pilgrims, at Satta he is invested with a string of white beads like grains of yam by, which is told, is the petrified grain of the Creator, left on earth to remind men of the Creation. These are found and pierced at Jhirak in Son (Jinz), Thar, near Goklana, ii. 93 f.). A native pilgrim, Hajji Abdul Nabi, who recently visited Hinglaj, adds that near the shrine is a well, 'the water of which rises times with a bubbling noise, discovered like that of a river fresh swoken after rain, and carrying mud in suspension. The Hindo pilgrims, when this well rises, throw in their beads, gloves, cardamoms, and coconuts. Should there be a delay in the rising, the pilgrims in the meantime place their hats, a sign of regard for the divinity itself, exposing each other to reveal their sins and inwardly repent. When the water rises, they embrace both hands joined, and throw in their offerings, which, after some time, on a second rise, are brought back again, when they are collected and thrown into huge vats which they make near the spot.'

It is thus an example of those eucharistic wells from which omens are taken in many parts of the world (Fras, Panamas, London, 1886, ii. 298, iv. 151). The shrine is much frequented by the Kapti devotees of the goddess Kaspura, 'she who fulfills desires,' who is much revered in Cutch. It is said that, if dawn overtakes their Raja or headman at the Hinglaj hill, the goddess will drown or otherwise destroy him (BO ix. 1901).

1 The habit of creeping under a sacred stone or through an orifice pierced in it is common in many parts of the world. Sometimes it seems to be that the person performing the rites may receive some benefit from the stones, or rather benefit the peculiarity of the spirit occupying it, and thus gain some spiritual or material advantage. This belief is illustrated by the English custom of passing children through师资 as a cure for scrofula and tuberculosis, a sympathetic connection being established between them and the tree. (J. G. Frazer, G.E. ii. 386 f.; K. W. Land. "Hippolyte's", London, 1868, i. 282) describe how women pass in a trance through the rock forward, several times under it and over the stone table on which the bodies of desecrated criminals are washed before burial, as a cure for epilepsy, to obtain cures for a number of other diseases in Homans, as asunder creeping under the marble deck which holds the Qur'an in the great mosque as a cure for social disease (E. Schurir, "Funklo-

The custom of creeping through the foundations of rocks, dolmens, and other megalithic monuments is common in Ireland as a means of procuring spiritual benefits (W. G. Borrie, The Deans of Ireland, London, 1897, ill. 757 f.). Women in Galway creep under the hator of a dead monk when he has taken the vow of suicide by abstaining from believing that they thus obtain the offering for the comfort of his soul (A. E. Forbes, "Nats Mitak," London, 1875, p. 211). In the present case the performances of the feat is regarded as a test of purity or chastity. As the long bellowing horn sound there is a peculiar side, through which it is believed that no thief can creep; and as Ma'labar Hill, near Bombay, a famous rock -enforced rock is supposed to purify or purifies its possessors who pass through it, the Mahakal of Travanmore, on his installation, passes through a gap in the rock. The same may be said of the 'two-bridged' dike (BO viii. 1887) 664; J. Dobson, Bombay and W. India, London, 1860, ii. 86; E. Meine, "Sind and Kashmir," (The Curr, p. 92; E. Troubridge, Biblical Notes, Madras, 1896, p. 277). As a very sacred horn sound the rites of a test of virtue is found in the case of the 'thirsting' St. Wilfrid's 'Ndris' in the Murray of Eupos Cathedral (F. L. B. 1856) 356; J. Burton, Anatomy of J. M. Miller, ed. Hulbert, London, 1898, ii. 225; E. 2, 52, 123, sec., ill. (1898) 356 ff.).

The goddess has another shrine on a hill at Cheelu in the Konkan District of the Konkan (BO xi. 1887) 276, 301). The Hill is sacred to the worshipper with grievous sin can accomplish this feat.

HISTORY.-The profound changes which have so drastically altered the whole situation in the religious thought and practice of modern times make it necessary to give, in this place, an outline of the religious history of the Indian peninsula, and the change in the view of the modern conception of Nature, which, as comprised in the mathematical-technological method, has dissolved the purely metaphysical teleology of Nature given by Aristotle, demolished the cosmology of the Bible, and provided modern philosophy with all its essential problems. There is, secondly, the new conception of history, which has radically altered our whole view of the past and future, and with which the present is a link in the whole concatenation of things. Thirdly, there is the modern ethics of humanity, which, besides the unwonted virtues of love to God and one's neighbour, has emphasized the intrinsic excellence of artistic and scientific culture—treating them, indeed, as peculiarly indispensable ideals. Finally, there is also recognized the positive ethical imperatives involved in political, social, economical, and industrial problems. There are, finally, the new conditions of social life on its economical and industrial sides, and the socialistic mode of thought issuing from them, which, in contrast to mere abstract speculation, insists upon the movement of the whole situation in its social and economical aspects. The first three movements sprang from the Renaissance, while the fourth is a product of the Illumination, and, under the influence of 19th cent. thought, has become a force that towers above all else.

Among these various tendencies, of course, there exists a manifold inter-relation and inter-action. But, if they are to be properly understood, they must be isolated and severally analyzed. In this article only the second, i.e., modern historical reflection, will be specially dealt with, and the nature and results set forth in the shortest possible compass.

1. The development, function, and results of modern historical thought and the concept of a relatively high state of civilization. Primitive man is content with the recollections of his family and clan. As his tribe and the great things coalesce in his mind with religion and mythology, so, in particular, his ideas of the
beginning and primitive history of things are bound up with religious cosmology, the myths of holy places, and the legends of his tribal deities. In this domain he delights in the extraordinary, the prodigious, the uncanny and the fantastic, the ingenuous and the intricate. Hence the beginnings of history are found in religious cosmology, the transmigration of souls, and, among almost all peoples primitive recollection is embedded in a vast romanticism. At this stage there is not the slightest trace of a desire for real knowledge or of a critical spirit. And not only does primitive man lack the sense of continuity and criticism; he likewise tends to regard himself as something apart and absolute. His origin, his mode of life, and his morality seem to him to be the only true and primordial forms, in comparison with which all that is foreign is barbarian and irreconcilable; the ties of custom and morality availing only in his own circle, and do not concern those beyond it. He has no conception whatever of the unity of mankind or of the concretion of events. The chronological era with which he deals are purely fanciful—sometimes idlyfically short, sometimes fabulously long. The only people of ancient times who in the fullest sense consciously passed beyond this stage of popular legendary reminiscence, of priestly tradition and royal annals, were the Greeks; and in this, as in all other provinces, it was they who laid the foundations of science. Among the Greeks, the traveller and the inquirer, untrammelled by the traditions of temples and the archives of princes, and impelled only by a thirst for knowledge to investigate and reflect historically. Here Herodotus, Thucydides, and Polybius, partly as a result of their contact with the non-Greek world, partly from the need of elucidating their own people's affairs and the operation of them, and, finally, impelled by their predilection for a philosophical generalization of knowledge, laid the foundations of history as an explanation of public movements by material or psychological causes, and, in particular, as a reason for the concretion of events occurring in the Eastern Asiatic region. They were the first to demonstrate that a general tendency was not only the explanation of human unity, and a supreme ethical and religious end for the race. These provided new and powerful incentives to historical reflection. In reality, however, they served to produce, not a scientific, but a revived mythological representation of history. The early Christian conception of mankind, alike as regards time and space, was narrow in the extreme, and involved in all manner of purely speculative pre-conceptions. The history of the human race, with respect to both its beginning and its end, was saturated with mythology; in the middle stood the miracle of the Incarnation and the rise of the Church. Interest was once more concentrated upon the inexplicable, and the description remains, as far as the mind of a profane mind. Heathen and Biblical myths regarding the origin of things were combined: Parallels with the Golden Age, the primal transgressions of Cain and Ham with the spiritual lapses to the Silver and Iron Ages, Nimrod's tower-building with the Trojan war; and, again, the Messianic outlook of the prophets with the hymns and eulogies of Vergil; the miracles of Elijah, of saints and martyrs, with those of Orpheus and Herakles. In the eschatological sphere, again, the Second Advent of Christ was brought into connexion with the transformation of the universe, Heaven with Elysium, Hall with Hades, and the stages of the soul's purification with the Empyrean. The history of the intervening period fell into three parts: a relatively short and wholly supernatural period, in which prophecy and miracle prepare the way for the coming of the God-man; an intermediate epoch, in which the God-man Himself appears as the body of the soul of the whole supersensual world, leaving behind Him His permanent incarnation in the Church as a Divine institution for the redemption and salvation of men; and, finally, the longer and for the most part non-miraculous era of secular history, which, although it is largely controlled by Satan and by demons, does not wholly fail to show the intervention of a redeeming God. The mythology of redemption, assimilating the mythical traditions of the ancients, now takes the place of historical reflection. The all-embracing scheme of the four Biblical world-kingdoms was constructed by Jerome, and held its ground till the 18th century. Medieval thought grasped its history, as the world and nations upon this scheme, and combined with it the love of the fabulous and its legends of the saints. The fresh narratives of fact or arid annals occasionally incorporated with them produced no essential modification. It was in reality Humanism and the Renaissance that first reverted to the traditions of ancient historical composition and historical reflection, and thus laid the foundations of modern historiography—so in the school of Brunii, where it was influenced by the style of the ancient rhetoric; in that of Blondus, where it showed proficiency in the rendering and criticism of documents; and in that of Machiavelli and Guicciardini, where it sought to explain events by their psychological and material causes. Wherever the culture of the Renaissance took root, there also modern history was evolved, being written, for the most part, by commission of State. From this, again, sprang the historiography of the Illuminism in the school of Voltaire, in the hands of Hume, Gibbon, Robertson, and Schiller, and was elaborated and appraised its materials with the freedom of an emancipated scholarship, extended its operations to the whole compass of human history and to the various factors of civilization, and, in its criticism of tradition as in its psychological explanations and its search for causes, far surpassed the methods of antiquity and the Renaissance. Then, in the 19th cent., there arose philological criticism, the idea of organic evolution, the new analyses of the State and of parties, pre-historic ethnography, the historical study of economics and society, the development of a history of art, of literature, and of religion, taking a place beside the too restricted political history, and finally, the expansion of politics on a world-wide scale in its bearing upon European events. This vast array of facts, ideas, and judgments has greatly amplified and complicated the subject-matter of historiography, has made its procedure more delicate and more difficult, and has enormously enlarged and at the same time disintegrated the web of causality. For man has scored an immense mass of historical work, moving on various lines, yielding magnificent results, and, nevertheless, with every supposed solution of its problems, giving rise to a fresh group. The total result, however, is not a mere mass of unsolved
problems, but is rather the full development of modern historical reflection, which, notwithstanding all mingled as to its conclusions, consists, precisely like the modern conception of Nature, in a purely scientific attitude to facts. The history of mankind merges in the evolutionary history of the earth's surface; it takes its rise in the pre-historic life of prehistoric peoples; it is determined throughout by the general laws of geographical conditions, and by the various phases of social life, and forms an unseparably complex, yet altogether coherent, whole of immeasurable duration both in the past and in the future. It is as a part of this array and system that we must survey and estimate our own existence, and its meaning and origin. On the analogy of the events known to us we seek by conjecture and sympathetic understanding to explain and reconstruct the past. From this point, again, we advance to the criticism of extant traditions and to the correction of generally accepted historical representations. Since we discern the same process of phenomena in operation in the past as in the present, we may guard, the various historical cycles of human life influencing and intersecting one another, we gain at length the idea of an uninterrupted, balanced in its changes, never at rest, and ever moving towards incalculable issues. The causal explanation of all that happens, setting of the individual life in its true relation, the interpretation of events in their most intricate interaction, the placing of mankind in a rounded system of ceaseless change—these constitute the essential function and result of modern historical reflection. The latter, viewed as a whole, forms a new scientific mode of representing man and his development, and, as such, shows at all points an absolute contrast to the Biblicological views of later antiquity.

2. The purely scientific character of historiography.—Modern historical reflection, precisely because of what has been said, certainly involves a multitude of fresh and difficult problems. These relate partly to the significance of such a view of history for our conceptions of ideal truth, and for our theory of the universe in general, and partly to the question regarding the scientific nature of historical study itself. The latter is the more restricted problem, and must be discussed first. It is, at the same time, the only problem that is directly concerned with historical reflection as such. Here it is necessary to emphasize one particular principle. In so far as historical thought purports to be scientific, its specifically theoretical or scientific element must be clearly marked off and defined. To declare the purely scientific attitude to historical fact, there are numerous other attitudes which must be rigorously distinguished from it, but are seldom distinguished in a proper degree. There is, for instance, the aesthetic attitude to history, which centres in its seeming wealth of incidents, and the suggestive action, and romantic charm of the individual; or which is concerned with an artistically rhythmic construction of the course of events. There is more curiosity, and that liking for the remark- able, the amazing, and the unconformable which is ever ready to be excited and kindled to sympathy by graphic description. Then there are some whose aim it is to estimate the ethical value of human action, and to arrive at an insight into that which reveals itself everywhere as moral force. Others, again, see in history a manual of politics and a means of educating national and political opinion—an education which, they hold, can never be acquired by merely abstract doctrines, but results only from the concrete observation of the whole historical process. Some seek in history support for the sociological and economical principles which, they believe, can be attained only by abstracting from various particular developments, and which must form the basis of our own conception and organization of society. Finally, history often serves as a school of scepticism and caution, on the ground that very divergent representations of historical facts may be given, that a variety of historical results is not uniform, and that, accordingly, history yields but little real information, and more than anything else brings home to man the limitations of his knowledge.

Now, these various attitudes to the facts of history are all quite competent in their own place and in their own way, and the idea of excluding or avoiding them altogether is not to be entertained. Nevertheless, they all lie outside the purely cognitive and theoretical sphere, and within that of judgment and appraisement. So far as historical study is concerned with distinctively theoretical and scientific interests, these other interests, as being here of secondary importance, must be scrupulously guarded against and excluded. We may grant that, if descriptive historical works were composed upon such rigid lines, they would lose the interest of historical science, and that the impression they make depends precisely on the effective combination of purely historical knowledge with the motives and incentives that may be drawn from it. Delineations of this type, however, are necessarily composite, and must be recognized and studied as such. They combine the interest of purely historical knowledge, with interests of the second degree, i.e., those relating to the significance of such knowledge for human feeling and human action. Such works are, accordingly, not purely scientific at all, and historical knowledge is to be obtained from them only by a process of elimination.

What is it, then, that constitutes the essential element of pure historical knowledge? The answer to this question is furnished by the following discussion, and it becomes increasingly clear in the history-writing of the present day. History as pure theoretical science is different from history as an element of belles lettres, politics, economics, and the like. In history, as in other things, purely theoretical knowledge is knowledge based upon general conceptions, and that signifies primarily knowledge derived from causal conceptions. The sole task of historical thought in its specifically theoretical aspect is to explain every movement, process, state, and nexus of things by reference to the web of its causal relations. That is, in a word, the whole function of purely scientific investigation. What is so explained may then quite well become the subject-matter of interests lying outside the sphere of theoretic science, and the resultant treatment may unite the two constituents as closely as desired. But it will always be possible and necessary to isolate either element, and this will be the more or less easy as the specifically scientific side has been the more or less conscientiously dealt with.

Only in one single point is this simple process of discrimination attended with any real difficulty. One may ask whether, in view of the peculiar nature of psychical causation, or motivation (which will be more fully derived from history soon), it is necessary to determine and appreciate it must not be drawn from personal experience and personal judgment. Such insight, it will be said, is always bound up with subjective estimates of what ought to be. Thus, e.g., only those who feel that certain ethical, political, and artistic excellences ought to exist will seek and be enterprising in the settings of action, while those who do not so regard them.
will seldom be able to recognize them as motives, and the less so as historical causes do not lie on the surface or force themselves into notice, but are a matter of fact, always brought to light by the method of investigation. Such a view is certainly not wrong. Yet it does not subvert our fundamental principle, since the causes so discovered are in the sphere of historical study, taken account of as facts only, and not as grounds for the corrections and criticisms of the historian, whose subjective attitude to the facts must, accordingly, be once more discounted. Besides, every supposed and, on grounds of analogy, probable cause must be shown to be actually operative; the particular knowledge of the power of motives is thus, as a means of discovery, doubly bound up with personal judgments, and the knowledge of what should be often serves as a heuristic principle for the understanding of forces actually at work. But the 'ought-to-be' must in turn always be separated from what really is. Historical study is concerned only with the latter, and the personal judgments have lent keenness to the power of perception must give way before the evidence of the real facts. Historical investigation is, in practice, very subjective, conditioned by the fullness, depth, and range of the personal experience of the investigators themselves, and is thus always marked by irreducible differences in their view. Being thus points, the purely scientific aim of historical reflection is not thereby surrendered.

3. The nature of historical causality.—This brings us at length to what is really our main problem, viz. that relating to the nature of historical causation. Here we find ourselves in the sphere of the logic or epistemology of history. Of the various provinces of knowledge this was the last to be won for modern logic, and it is as yet the most imperfectly elucidated. The Aristotelian philosophers, the medieval Church, and the purely scientific aim of historical reflection is not thereby surrendered.

Historical study is concerned only with the latter, and the personal judgments have lent keenness to the power of perception must give way before the evidence of the real facts. Historical investigation is, in practice, very subjective, conditioned by the fullness, depth, and range of the personal experience of the investigators themselves, and is thus always marked by irreducible differences in their view. Being thus points, the purely scientific aim of historical reflection is not thereby surrendered.

The latter conception was first set forth by natural science, and by philosophy as modified thereby; but it was, in fact, framed originally to suit Nature only. Down to the times of Herder and Hegel, acontecements were merely noted, and the account of history at all, and abandoned to historians, litterateurs, or theologians; or else brought historical occurrences under a causal conception, which was simply that of natural science philosophically generalized. Descartes surrendered history to the theologians and to revelation; Hobbes and Spinoza treated it in a naturalistic fashion. The naturalistic view prevailed also in the case of Hume and Kant, notwithstanding the great diversity in their respective views of causality. This is the case even to the present day among the successors of Hume—the adherents of the Positivism of Comte—and we need here recall only the names of Taine and Tawney. In the Kantian school, in its development towards Hegel's Panlogism, the knowledge and etiology of Natural were, on the other hand, subject to extreme violence by historical thought, inasmuch as the latter became simply the application of the law of dialectical movement to the cosmic process and the course of human affairs. But if this was a violation of nature, in so far, it was a revolt against the historical thought itself, which by such procedure gained only a finer sense of order and continuity, but no less recognition of its own fundamental conceptions. It was only with the return to the Kantian theory of knowledge, and the emancipation of psychology, that the task of framing a logic of historical science, in contradistinction to the logic of natural science, came to be clearly recognizable. Such a band, and Rickert were the pioneers of this new and powerful method of investigation.

The primary fact of a priori recognition of the difference between the causality of natural science and that of historical science. The causality of natural science implies the absolutely necessary principle that events are bound together by a changeless, all-pervading, and, in all particular cases, identical law of reciprocity. The scientist demonstrates the laws thus ascertained by artificially constructed examples or experiments, and by means of these submits natural processes to exact calculation. The method finds its highest expression in the establishment of a perfect equivalence between the amount of energy that disappears in the first form of an occurrence and that which re-appears in the second, i.e. the law of mere transformation and quantitative conservation of energy. To this end, by abstracting from all qualitative distinctions, the method of natural science reduces events to manifestations of energy, and attends only to the aspects of energy and transformation in the quantity of energy present. Now, historical causation is something entirely different, being essentially and directly a matter of psychological motivation. In the historical sphere nearly everything passes through the medium of consciousness, and in the last resort all turns upon the complex interaction of unconscious efforts, into which even the unconscious elements tend to resolve themselves. Thus the peculiar irrational quality and initiative of the individual consciousness makes themselves felt in the ultimate result, alike in the individual life and in the life of groups. Here, therefore, it is not permissible to reduce events to non-qualitative forces, or to explain effects by causal equivalence. Then we must also bear in mind the infinite complexity of the motives that arise on all sides and act upon one another—a complexity which gives a special and peculiar character to every particular case, and so defies all calculation and experimental proof. Further, all occurrences, whether in the individual life or in the life of groups, are so affected by the entire psychological condition of the individual or the group that another quite insalvable element is introduced into the process, a new force, new element of essentially fresh content, due to a convergence of historical causes (cf. art. CONTINGENCY, vol. iv. p. 89). Accordingly, psychological motivation differs in all respects from natural causation.

It might thus appear that the peculiar character of historical etiology could be interpreted and methodized by means of psychology, as is proposed by Dilthey and Wundt. But on various grounds this is impossible. For one thing, historical study does not work with psychological motivation alone, but very frequently has to do with social condition as well. Polar limitations, glacial periods, earthquakes, famines, destructive winters, uninhabitable regions, and the like, often play a great part in history, and certainly not always in purely psychological events. The destruction of Napoleon's army by the Russian winter was due only in part to the psychological effects of the cold; and even in cases where geographical or physiological conditions eventually produce psychological effects, we have something very different from purely psychological motivation. Further, psychology cannot supply any kind of real pre-
calculation of historical events and developments. If that were possible, it would imply that the facts of history could be explained, and then traced back to the soul, as something that had issued from it. This is the case especially with the so-called folk-psychology, which is simply a rendering of history in terms of psychological laws, but does not explain the former by the latter. Here, indeed, the facts are always anterior to the psychology, and it would be more accurate to say that the history helps to explain the psychology than to assert the converse. The peculiar nature of the causality of motives points, no doubt, to the distinctive nature of historical knowledge, but it cannot properly provide a basis for it. Nor can such a basis be found in the subject-matter; it is to be derived from the method alone. The method, however, is determined, not by the subject-matter, but by the epistemological end in view; for knowledge is never a mere reproduction of experience, but always an abstract selection of particular elements of experience for a definite intellectual end. Thus, e.g., the method of natural science is determined by the interest of selecting that aspect of experience in which it manifests itself as absolutely determined by universal laws, and, accordingly, the method in question abstracts from all that is qualitative and individual. The method of historical science, on the other hand, is determined by the object of selecting from the flux of phenomena which is qualitatively and uniquely (1) individual, which introduces a larger, a smaller scale, and of making this intelligible in its concrete and specific relations. It therefore abstracts from the universal laws which may possibly regulate even its subject-matter, but which fail to explain the peculiar and concrete elements of it, and it operates not with the conception of causal equivalence, but with that of individual causes, which, precisely because of the infinite variety of them, is the distinctive character of historical science. The method of natural science abstracts from the infinite variety of causes and establishes the universal law, whereas historical development abstracts from the infinite variety of causes and establishes the particular law. The method of natural science seeks to determine the causes, whereas the method of historical science seeks to explain the effects. In the former case, the subject-matter is known, whereas in the latter case, it is sought. Therefore, when the method of natural science seeks to explain the particular, it proceeds from the general to the particular; whereas the method of historical science seeks to explain the general, it proceeds from the particular to the general. The method of natural science is a deductive, whereas the method of historical science is an inductive method.

Now the method of history, with its logical determination by a distinct intellectual end, answers to the peculiar characteristics of the historical material, just as the method of natural science answers to those of its material. The processes of the physical world demand in greater degree the first-mentioned type of isolating interest (universal law); those of the psychical world, the second (individual causality). It is not the methods themselves, but their respective intellectual ends, that spring from the nature of the subject matter; and, accordingly, the distinctive characteristics of the method correspond in each case to the ends determining it. The physical world invites us to understand it by the deduction of general laws; the psychical world by a sympathetic reconstruction of the causal connections in which the actual facts of history have taken shape. Here, then, the true nature of historical knowledge comes to light. Historical knowledge, as such, is not scientific as it may require — a national history, a state of civilization, a biography, an intellectual development, etc. — and seeks, by means of the individual causality proper to history, to make it as intelligible as it were part of our own experience. Even the history of mankind, were it within our grasp, would be a freely selected and individually concrete subject-matter. In such a history could be understood only as a particular concatenation, and in no sense as an instance of the operation of universal laws. Such purely objective causal explanation, based upon the widest possible experience and the most methodical application of experience, constitutes the distinctive character of history as a peculiar development.

Precisely because of this, however, historical thought shows itself to be (2) conceptual thought, though the concepts which it must frame are different from those of the natural sciences. The universal applies to all history, and makes history intelligible in the special form of individual causality. Subjects the entire material to a uniform conceptual mode of treatment. Moreover, the several isolated subjects of inquiry, which are to be exhaustively explained in this way are conceptual unities, for which, it is true, we have as yet no logical term, but which may be designated "historical aggregates" (historische Totalität). Such, e.g., a human life, a nation, a condition of affairs, the spirit of an age, a legal constitution, an economical condition, a technology, etc. These aggregates are selected freely and one after another by the investigator, but may be re-combined, till at length the highest concept of historical totality, i.e. humanity itself, is reached. It is, indeed, true that this highest concept can be described only by the successive descriptions of its separate components and factors. The conception of mankind as a whole, just because mankind cannot be brought within a single, simultaneous, and all-embracing view, can never be more than an incomplete work of the imagination. Now, inasmuch as these totalities are processes, and internally coherent congeries of phenomena, there emerges a third fundamental principle of historical reflection — (3) the principle of development. This conception must certainly be taken in its purely historico-empirical sense, and must not be confused with the development in natural science or with that found in metaphysics. The scientific conception of development signifies the explanation of becoming by the addition of infinitesimal mechanical changes; the metaphysical conception denotes the interpretation of reality as the expression of an absolute intelligence which realizes itself therein. In contradistinction to these, the teleological conception of historical development denotes the progress that issues from the essential element of certain psychical efforts, the working out of the consequences that are latent in the earliest beginnings, the dynamic element in psychical forces which are not exhausted in a single manifestation, but work out towards a result — forces in which exists a tendency to a development akin to logical evolution. Thus there is development in religious, ethical, and philosophical ideas; likewise in the character of individuals and people, in the forms of government and economic conditions. Wherever this tendency asserts itself, it constitutes a principle of development that organizes and tends, onward from within — a principle that absorbs and elaborates the various causes, and supplies them with a focus of attraction or repulsion.

Nevertheless, the value of the concept of historical development must not be over-estimated, as it often is at the present day. For, in the first place, it does not mean an infinite progress, but in every particular case implies only a single concrete impulse controlling a given aggregate. It manifests itself in the fact of exhaustion as well as in that of advance. All progressive developments work also towards regression, so as to make room for fresh movements. The concept in question has, therefore, nothing to do with the conception of an unlimited and never-ending development; it could be understood only as a particular concatenation, and in no sense as an instance of the operation of universal laws. Such purely objective causal explanation, based upon the widest possible experience and the most methodical application of experience, constitutes the distinctive character of history as a peculiar development.
about may occasionally give rise to new and fruitful di-
visions of history, which are generally due to the discovery of a
new tendency to unify the elements of a
given situation, however produced, and thus also
to mould them into new stimuli to development.
The second problem of this kind is the
supremely important influences of climate,
atmosphere, fertility, geographical position, and
time and place, which operate upon physiological
occurrences and conditions—deaths, inter-
breeding, mixture of races, food-supplies, and the
like. To the domain of chance must likewise be
reckoned, so far at least as we at present know,
distribution of individual qualities, as, e.g.,
talent and genius, which sometimes occur but
rarely, sometimes in amazing profusion. It is
true that such accidents are rightly so designated
only when judged with reference to the conception of
historical aggregations and the developmental
processes which give rise to them, to a
very great extent at least, be brought under
the conception of natural law. The idea of con-
tingency is, in fact, one in regard to which the
historical and scientific modes of thought are dis-
credited with special clearness.

In the sense specified, accordingly, the causal
explanations of historical aggregations constitutes
the purely theoretical functions of historical in-
estigation. It is certainly obvious that such
causal explanation has a rather restricted range.
It is dependent upon the existence of a tradition,
upon a critical examination of that tradition, and
upon the imaginative and synthetic powers of the
investigator. It can never re-constitute its object
in their entirety, but it can decompose it;
which can be accomplished only by analyzing,
and by moving from subject to subject. This
explains why the work of history must ever be taken
up afresh. The accession of new material, the fresh
sifting of facts by criticism, new ideas and views
in the linking of causes to historical aggregations
—all of these call for ever new beginnings, and
lead to a revision of previous delineations. The
writing of history must ever be an experiential
endeavor which we never complete; it will never be able to
compass the All in its extension and in its intensity.
It will never be able fully to analyze the indi-
vidual peculiarities of souls or groups of souls, or
to explain that power of initiative and self-deter-
mination which we call freedom. It will never be
able to find the ultimate derivation of a historical
world of personalities, or even of the movements
at work within that world, in anything else. There
will always be limits to its realization of its intel-
lectual energy, if it is taken in a comprehensive
rational determination. But the writing of history is
not on that account futile or valueless. For it
endeavours to build itself so far as a
causal comprehension of himself is possible or
necessary. It is, in fact, only on the basis of such
causal self-comprehension that our own historical
work can be clearly and circumspectly extended.
The ages of naive traditionalism and naive ra-
nalism required no such understanding of them-
self. But, as they grew up, they were faced with
new problems. It is by no means exhaustive, and
by no means exhaustive, to an understanding of
the naive traditionalism and rationalism of a large
masses of mankind.

4. The relation of historiography to the philo-
sophy of history.—Our concern with history, how-
ever, is by no means exhaustive, and
the formation of aggregations. For, on the
one hand, there arises the problem regarding the
relationship of the historical process in the world to
the fundamental forces of the universe, and, on the
other, the problem regarding the significance of
that process for the living and operative will of
each particular age—the world of events, and that of
the events of history, and yet manifests at
every instant a creative power of its own. To
the former problem belong the questions concerning
the foundation of the psychical world in the Uni-
versal Spirit, the connexion between the physical
and the psychical world, the Divines direction
and sustaining of the cosmos, and the distinction
between the purely natural life of the soul
and the spiritual and civilised life that strives to
transcend it. The second problem comprises the
questions relating to the activity for the active and constructive will, to the inward
meaning and significance of that substance of life
which takes concrete form in the process of history,
the ideal values to be won from that process and
to be recognized in it; and, finally, its ultimate
meaning and aim. These questions all lie outside
the sphere of historical historiography, and belong
in reality to the philosophy of history which ex-
plains and estimates metaphysically. Empirical
and philosophical history must be clearly distin-
guished in principle, though in the actual deline-
ation of events they are usually found in some
degree of combination.

But the philosophy of history itself, as has just
been indicated, includes different kinds of
problems. The questions of the first group noted
above relate to purely metaphysical matters; and,
whether they are dealt with as lying within the
sphere of a complete system of metaphysics, or
agnostically set aside as unanswerable, it is compar-
atively easy to keep them apart from history
proper. The metaphysical background will be
discerned only in delineations on a large and com-
prehensive scale, and even there it will assert
itself rather in the intellectual attitude as a whole
and in occasional aphorisms than in elaborately
constructed theories. This is, in all events, what
we find in so purely empirical a historian as Ranke.
Modern historiography, as contrasted with the
medieval and theological types, has certainly in
principle wrenched itself free from the meta-
physical element, whatever the personal views of
the historian regarding the latter may be. This,
however, is no more than a theoretical emancipa-
tion. In view of the practical importance of the
metaphysical presuppositions, their separate con-
sideration and discussion are not matters of the highest
import to philosophy, and the historian must take
care to keep such vital questions open, and not to
foreclose them by casual remarks and ostensible
triumphs.

The other group of questions in the history of
philosophy are not so easily kept distinct from
historical composition. It is true that purely
historical delineations, like the delineations of
natural science, may conceivably be given in
purely empirical categories, as, e.g., Tookeville,
Fustel de Coulanges, and Eduard Meyer endeavou-
re to do. This, however, cannot possibly be the
regular procedure, because the reader aspires not
only to a knowledge of causes, but to a point of
view from which he may pass judgment on the
facts of history, and because the questions that
thus arise cannot be answered by themselves alone,
or apart from a mental picture of the entire
world of history. Nevertheless, with a view to clear-
ness in the questions involved, the distinction must,
in principle at least, be strongly insisted upon. This
The task of historiography is not to be demonstrated by means of the latter. The empirical conception of historical development is not of the regressive, developments, but not the advance of mankind as a whole towards a final and universal continuity. Hegel made the mistake of reducing each of these conceptions of development to the other, and also of being both together upon the metaphysico-logical movement of the Absolute. In reality, the conception of ethical development is individualia, in general, faith in the Kantian sense—a postulate based upon the actual occurrence of the aggregates of ethical life, and our personal experience of them. Consequently, it is necessary to make an open question whether his kind of development attains its end in the present life, or in a further progress of souls in a life beyond. Certainly experience does not support the form alternative. Similarly, the system of values can be realized only approximately, and as the possibilities of an approximation are, for the individual, so varied, his share in the final system must also remain an open question.

In connexion with this conception of development, mention must be made, finally, of still another important element to which attention is directed in the later pan, viz. (8) the problem of individualisation. The system of values is no rationally demonstrable abstract system, such as would confront all the phenomena of historical history as an absolute and everywhere identical standard. If we designate the system of values as the 'Idea,' then the course of history is not a something, but rather a cause sometimes less effective progress towards the realization of the ideal, which is everywhere the same. The truth is, rather, that all spiritual manifestations in individualia or character, in approximation to the metaphysic of spirit—which cannot be more fully dealt with here. But in that case every historical phenomenon, viewed from the standpoint of the ethical philosophy of history, bears a double character: it is, on the one hand, a concrete manifestation of the idea, having a relative right of its own, and, on the other hand, an approximation to the absolute system of values. In spite of all obstacles and defects, there obtains everywhere an individual and concrete progress towards the ideal. The thesis in which the individual and universal value is individualisation—an antithesis which cannot be theoretically reconciled at all. Hence every historical phenomenon is to be estimated by reference only to that degree of approximation to the idea which is set before it and is possible to it. In this way every epoch has a relative justification, though it must, at the same time, be judged in the light of an absolute end. This shows the necessary relativity of the philosophy of history, and yet makes it possible that the relative shall appear to be included in the movement towards the absolute. The absolute is the relative, yet not fully and finally in it, but always pressing towards fresh forms of self-expression, and so effecting the mutual criticism of its own individualisation. It is the last word of the philosophy of history. This implies, however, that in the writing of history and the description of historical phenomena—in spite of all appraisements by reference to final and absolute values—there still remains the concrete individual character of the objects dealt with, and there...
Our knowledge of the Hittites up to the 14th cent. B.C. is very fragmentary. An Egyptian stele of the XIIth dynasty 1 may possibly represent the Hittites settled in Southern Syria, and Thothmes III. records 2 that he received tribute from Kheta. However, the magnificent find of some 2500 cuneiform tablets, unearthed by R. Kuss, near Dura, to the north of the Caspian Sea, enables us, with the help of the Amarna tablets, to form a fairly clear idea of the succession of events in the 14th and 13th centuries B.C.

The central figure of this period is Subba-Iljuma, ruler of the Hittite capital in Cappadocia known as the 'City of Battu,' the modern Bogha Keui. At the beginning it seems to have been little more than a city-king; but, by uniting the neighbouring States in friendly alliance, and by a series of campaigns in North Syria and northern Mesopotamia, he succeeded in establishing a Hittite Empire, including Syria north of Kadesh on the Orontes, the Mitannian kingdom, and the central portions of Asia Minor. Subba-Iljuma was followed successively by two sons, Arrunas and Murali, both of whom lacked the energetic spirit of their father, to the extent that both Assyria and Egypt made successful campaigns into the Hittite territory. Murali's son and successor, Mutalnlu, immediately upon his accession, set about rebuilding the Hittian power. His influence may be judged from the array of nations that gathered to his standard: troops from Arinna and Pisidias, Dardanians and Myrians, Lydians and Catanomians, together with contingents from all North Syria, bands together and marched to meet him. The challenge was led by Ramses II. Battle was joined at Kadesh on the Orontes. Neither side seems to have been signal victor. Shortly after, Mutalnlu was assassinated, and his brother Hattusil fell heir to the throne. This ruler, about the year 1271 B.C., made an offensive and defensive alliance with Ramses II., the terms of which were engraved on a silver tablet and sent by the Hittite king to Ramses. The treaty is preserved to us in an Egyptian translation engraved on the wall of the temple at Karnak, and another translation, now very fragmentary, in the Ramesseum, as well as in a cuneiform tablet from Boghas Keui, written in the Hittite language.

The rising power of the Assyrians and of the Muski on the north now not only checked any further desire for conquest which the Hittites may have had, but gradually rose to a level of their own. Only two further rulers of the Hattian dynasty, Dushalis and his son Armanu, are named in the Boghas Keui tablets. It is very likely that not long after this the Hittite Empire was dissolved, and before the end of the 8th cent. B.C. the greater part of its territories had been absorbed by Assyria and Phrygia.

2. Religion.—The chief sources of our knowledge of Hittite religion are the sculptured monuments and seal cylinders, the inscriptions in Assyrian and Egyptian, and the Boghas Keui tablets. Pending the complete decipherment of the Hittite language, 2

1 Steh, C. J., Musée de Louvre. 2 Annals of Thothmes III. 3 1271 B.C. 4 Hannevanger der deutschen Orient-Gesellschaft, xxxv. (Dec. 1877) 1 ff.

Contributions towards the decipherment of the Hittite pictographs have been made by J. Halkin, A. Schaefer, H. Gebelein, and others, while more or less complete systems have been put forward by O. J. Boi, C. G. Conder, F. Jansen, F. E. Puchner, and A. H. Sayce. The investigations of Sayce and Jansen have received recognition from scholars, and it is now generally considered that Jansen's decipherment of the hieroglyphs of Jansen's work consists in his excellent list of symbols, and his division of inscriptions into word groups. Sayce's system, on the contrary, is slowly gaining adherence. His work began with the investigation of proper names such as Cherchemus, Tyana, Muski, Dushalis, and others, appearing in various forms, purely phonetic or partly ideographic. A considerable list of values has thus been formed. Doubtless, much of these values will require modification; but the system seems to be main

1 Geberlin, Land des Hittites, p. 3, III., lvi. 2 Ungnad, 'Urkunden aus Dilbâ, Bellettris zur Assyriologie, vol. 1. 3 Jastrow, RS xii (1910) 87 ff.
these sources are meagre. While the sculptures deal, in the great majority of cases, with representations of deities and scenes from the cult, they afford us at most some of the names of the gods concerned, and in very few instances can the deity be identified and the name supplied from the Assyrian and Egyptian sources. The case is much the same with the inscriptions on the seal cylinders or terracotta plaques. A fairly large mass of material is preserved in the later Greco-Roman writers; but, like the historical material that survives for the later parts of the Hittite culture, this can be used with confidence only when checked by the sources already mentioned.

PrIMITIVE ANIMISTIC CONCEPTIONS STAND OUT CLEARLY IN THE HISTORICAL FIRMAMENT OF THE RELIGION. Springs, rivers, trees, and mountains were considered sacred. At Alatun Bunar, west by south from Ioniaum, is the familiar monument which stands as the remnant of a building, with sculptured front, dedicated to the spirit of the copious fountain which here flows forth. On the shoulder of Mount Argunus, the highest peak in Asia Minor, is another fountain, whose sacred character was marked in Hittite times by a spring house with an inscription, part of which remains. The tetramystile temple, which is a feature common of the Arguns country, may be seen on the same spot; and that the sanctity of the place was transmitted to later times is evidenced by the discovery, in the same place, of the remains of a church or chapel. High up in the Anti-Taurus range above Comana Aurea, and near the small village of Qosar Quysu, is a limestone monument in a sanctuary. Here the inscription, which owns its position, no doubt, to the sacred character of the mountain. The peak of Argunus likewise was considered sacred, and further evidence is furnished by the present for the various local cults of deities standing on mountain tops. Moreover, the treaty of Hattusil with Ramses II. mentions 'The Lady of mountains and rivers,' the sacred tree appears to be preserved sculpture from Salkje-Genzli, and it is perhaps used as a symbol in the inscriptions.

However, in the period represented in the Hittite monuments, the religious belief of the people had long passed the primitive stage. Animals were still used as emblems, and the people may have continued to believe in the sacredness of springs, mountains, and trees; but a higher plane had been reached, and we may believe that the religion stood on about the same level as that of Babylon in the time of the first dynasty of Babylon. The selective processes of time had exalted a comparatively small number of the primitive Nature-spirits in gods directly concerned with the welfare of the people; and these had taken on anthropomorphic forms, assuming the appearance and dress of the Hittites. The distinguishing garb of the male deity, as seen on the monuments, consists of the short tunic and conical hat; that of the goddess, the long robe and high cylindrical hat. Shoes pointed and turned up at the toes were a feature common to the dress of both. The Hittite artist, as a rule, made no attempt to differentiate the deities through varied portraiture, but relied in well-rounded, notwithstanding the fact that translations of well-rounded, notwithstanding the fact that translations of

...this matter on accessories such as insignia, arms, or totemistic emblems. In many cases the name also is appended, so that to one who knew the native writing the uninitiated might read difficulty...
on a charging bull, may be taken as depicting the
god in action.

The name of the Great Mother is not yet deter-
mimed, though it seems likely that the original
Caphtor was a form of the Hittite name under which she was worshipped later at
Comana. Perhaps the most satisfactory repre-
sentation of her is in the Procession of the God of the Tree at Boghas Keui. Her skirt is here pleated
and provided with a train. Her hair falls in a
long braid, and on her head is the "mural crown." She has no weapons, but bears in her left hand her
peculiar symbol and in her right a staff. The
totemistic emblem on which she stands is the
lionsess or panther. Her son, who follows her in
the procession, is a bearded youth in the typical
masculine dress, bearing on one hand a staff, and
in the other a double axe, while a dagger rests in
its sheath at his belt. The animal on which he
stands is the same as that of his mother. His
Hittite designation has not been determined,
though he was known in the West as Attis. A
similar deity of fertility, perhaps Sandan or a local
form of the son of the Great Mother, is the bearded
god in the Ivris sculpture, carved near a copious
spring, who is represented as rubbing his right
grape and in his left the heads of several stalks of
grain. That he is not a god of the harvest or a
Bacchus is evident from the fact that both grain
and grapes are symbols of growing stalk and stock.
A reminiscence of this or a similar early god still lingers in Damascus in a
tradition, reported by J. E. Hanauer, of a steel
dish representing the deity who guaranteed the
crops, holding in one hand, as a symbol of his
function, a cluster of grapes, and, in the other,
stalks and ears of wheat and barley.

The numerous other deities, male and female, in
the sacred procession, like the majority of divin-
ities pictured by the Hittites, cannot at present be
identified. Prominent among them may be men-
tioned a mountain-god who stands behind Teshub,
The two goddesses of the double-headed eagle, and
a grotesque figure with human head, body formed of
lions, and lower extremities replaced by the
blade of a dirk or dagger.

Among other deities who seem to be native, but
of whom little more than the name is known, may
be mentioned Hipsa, Saluq, Tarqo or Tarhu, and
Tills, most of whom appear only in personal
names.

Through each city had its tutelary deities and the
Empire its pantheon, there was no hesitancy in
recognizing and adopting foreign gods; and as a
result native and foreign deities are often so
associated that, in the present state of our
knowledge concerning such religious systems as the
Phoenician and the Assyrian, it is difficult, and at
times impossible, to assign a god to his rightful
people. Ashur (or Ashtur) appears frequently in
personal names in the so-called Cappadociam tab-
lets, and, notwithstanding the role he played as
chief Assyrian god, his origin is by no means cer-
tain. Ishhara is mentioned in the treaty with
Egypt as a Hittite goddess, and her name appears
on the Indissima bilingual, but she may have been
accepted from a neighboring people. A Hittite Kheshnu is mentioned in the Egyptian
records, but this also is a Phoenician and Aramean
deity.

Perhaps the most remarkable element in this
complex of divinities connected with the Hittites
is represented by four names of Mitanni gods found
on one of the Boghas Keui tablets, a-m
ra-at-ti-il, u-re-u-ma-at-ti-il, in-da-ra, na-te-at-ti-
a-an-na; that is, Mithra, Varuna, Indra, and
perhaps Nasaty, the "Twins." An attempt to
discuss the interesting admixture would be pre-
nature, but it clearly shows some connection
between the Hittite culture and that of the
Aryans of India, possibly the addition to the
Western people of a fresh type of population,
representing a migration during the middle of the
second millennium.

We shall doubtless find, when the tangled mass
of Anatolian religious ideas is understood, that the
Hittite religion contributed in no small degree to
the later classical mythology. Two of the sculpt-
tured blocks dug from the mound of Aralan Tepe
near Malatia contain a scene which reminds us
forcibly of a classical myth. One block contains
the figures of two gods in ornate pointed caps and
the ordinary short tunics. One of these, a bearded
god, bears a dagger, club, and lance. He is pre-
ceded by a bearded figure who seems to be com-
bating with his lance a many-headed serpent coiled
in the water. The scene is not complete, but
several of the serpent's heads with open mouths
and fangs ready to strike are clearly discernible.

This may prove to be the archetype of Heracles's
slaughter of the hydra, assisted by his friend Iolans.
The sanctity of Mount Argeus from Hittites to
Christian times is well attested. Moreover, Argaeus is a title of Zeus Amorados, Argaeus is known from Maximus of Tyre to have been a god as well as a mountain. This god Argaeus, then, must be identified with the Apollo-
like deity represented on the Argeus coins, who,
was doubtless originally the Hittite god of this
mountain. It is interesting to note that in this
instance the myth seems to have come down to the
present day; for we must see in the modern
legend to the effect that Ali Dagh, the cone-shaped
mountain below Argaeus, was formed by a basket-
full of earth which fell here as the result of the
breaking of Ali's basket an adaptation of an ear-
ier legend in which the god Argaeus was the
actor.

It is very possible that the sources of the Amazon
stories will also be found among the Hittites, per-
haps suggested to the story-teller of later times by
a vague tradition of some rite connected with the
cult of the Mother-goddess, or by an actual war-
ruling band of women. The possibility of this source
is suggested by the discovery of an armed lady
sculptured on a post of one of the gates of the
Boghas Keui fortifications.

The figure, which is one of the best examples of
Hittite art, is that of a woman with short skirt,
girdle, coat of fine mail, and the pointed hat
dorned with horns, her dress thus closely resem-
blying that of the male deities. The lady's arms
are the single-bitted axe, which she bears in her
right hand, and the dagger, which rests in a
sheath attached to her belt. While the figure is
of great interest in its suggestion of a possible
connexion with the Amazon legends, too much
stress must not be laid upon this theory. It is
more natural to suppose that the sculpture repre-
sents a Hittite Athena, and that she stands here
as the guardian of gate and city.

3. Death, etc.—The common method of burial
among the Hittites seems to have been interment
in large jars after a partial cremation of the body.
In 1907 a mound was discovered by the Cornell
Expedition in the plain south of Mount Argeus,
at the hamlet of Egri Keui, which was used as a
burial and seemingly also as a cremation place. Here
were found human bones, fragments of large jars,
some of them painted ware, and pieces of charred

wood. This and the further discovery of such jar-
burial at the pre-classical Ionian as well as at
Carchemish would indicate that this was the
chief method. That other methods were in vogue
is suggested by the discovery, made by the Corneli
Expedition, of an instance of cist-burial at Sevinj-
lik in Lycusia south of Ighin, the grave in this case
containing a small hearth with rows of bit-
tite in type. Persons of note, however, were
interred in vaults built in a conspicuous spot,
such as the summit or shoulder of a mountain.
Whether the manner of interment was the same
as in mounds further west is not known, as no
tumulus definitely shown to be Hittite has been
noticed.

It is to be expected that a people so favourable
to the cult of the Mother-goddess who yearly
revivified Nature should have a steadfast belief
in a life after death. Strangely enough, none of
the larger monuments sheds any light on the sub-
ject. Several most interesting seal cylinders, however, though showing strong Babylonian and
Egyptian influence, may be taken as pictures of
the Hittite lower world. In these the deity who
drives the dead into the underworld, is repre-
sented with two heads, one of which turns
towards the judge, while with the other he
watches the deceased. Three figures following the
dead suggest the three daughters, Minos, G_RESPA, and
Rhadamantius, associated by the Greeks with
Pinto, and indicate one more line of connexion
between pre-Hittite Greece and Asia Minor.
Other scenes on the cylinders represent the dead
partaking of food, some of which is furnished by
kindly monsters; and in one place we seem to
have a cremation scene.

4. Status of woman.—From the prominence of the
Great Mother cult as well as from the impor-
tance of other female deities in the pantheon, it was
natural to conclude that the status of woman
among the Hittite peoples must have been com-
paratively high. This conclusion is confirmed by
the records. Whether monogamy was the rule is
uncertain, but it is interesting to note that when
Subbi-luliuma supported Mattinaxis as heir to the
throne of the Mitanni land, he conditioned his support on a monogamous marriage of the Mit-
namian prince with a princess of Hatti. The high
position of woman is shown further by the impor-
tance of the queen as chief priestess alongside the
priest-king, whose worship she presided over by her prominence in State
affairs, as evidenced by her seal affixed to treaties and royal edicts. A similar position of impor-
tance was held by the priestess, whose seal also
appears on such documents; and one queen-
hemoth of the Hatti dynasty, Putu-hips, is men-
tioned as co-ruler, and later as regent, during a
short interregnum.

5. Cultus.—In the course of the excavations at
Boğaz Kêî, the foundations of four buildings
which seem to have been temples were laid bare,
three in the upper city and one on a lower terrace.
The last mentioned is the site where a portion of
the collection of cueniform tablets was unearthed.
The foundations of all five temples are massive
and in their plan and construction have features
in common with buildings excavated at Cnosos,
Tiryns, and Mycenae. The lower temple, which
William has considered to have been the sanctuary of Teshub, consists in the main of a large rectangular
court, with entrance from the south, opening northward through a hall of columns or pillars
into the adyton, another rectangular room at the
north side of which stands an immense base,
undoubtedly the pedestal of the god’s statue. Added

to this main plan is a system of long, narrow
chambers, which served as magazines for the stores
and accessories of the temple; and the whole is
surrounded by a wall of stone. Only the founda-
tions of the temple complex remain. These consist
of massive squared blocks of limestone forming a
socle about a metre high, the upper surface of
which is provided with rows of holes, doubtless

designed for the reception of long poles supporting
the clay superstructure. The three buildings in
the upper city have a similar plan, though the construction is not so massive. It is of interest to note in this connexion that the Anu
Adad temple at Asshur in Assyria shows a distinct
departure from the usual Hittite, with revealing features which may prove to be Hittite.

Very little of the cult can be reconstructed from
the monuments. These clearly show that libation
and animal-sacrifice played an important part,
the victims, so far as we can judge from the
sculptures, being sheep and goats. The king or
queen is represented in various instances as stand-
ing before the deity pouring a libation with a high
one-handed pitcher, the stream from which, in
some cases, falls into a two-handled urn set on the
ground, as in the sculptures at Bogaz-Kêî and
Ibelieh. In several scenes of this character an
attendant is pictured in the background, leading
or holding the sacrificial animal. The Fraktur
sculptures show the priest pouring a libation while
the offering is on the altar, presumably burning.

6. Divination.—Among the interesting dis-
coversies made were many small tablets, on each of
which clay representations of sheep’s livers closely resembling the Bab. model coming from the
time of Hammurabi. This shows clearly that
hepatoscopy, introduced from Babylonian prac-
tised among the Hittites, and we may believe that
other forms of divination were adopted at the same
time; indeed, it is not at all unlikely, considering the long occupation of the region by the Hittites, that this people, whose inter-
course with the Egyptian races was well attested,
transmitted hepatoscopy and astrology to the
West.

7. Relation to other civilizations.—Our present
knowledge of the Hittites is too meagre to permit
a discussion of the mutual interchange of cultural
elements between the Hattian and the Assyro-
Babylonian civilizations on the one hand and the
Egyptian on the other. That such inter-
change between Hittite and Assyro-Babylonian
occurred, and in no small measure, might, if no
other evidence existed, be safely conjectured from
the facts that the god most prevalent among them
is the same as that worshipped by the Egyptians. B.C. we find Hittites or Mitannians in control of
Assyria, that from very early times Hittites lived
peacefully in Babylonia and Assyria, and that in
a period possibly as early as 2900 B.C. we find
Assyrian names and names-elements in the CAPPADOCIAN tablets.
We have seen that Bab. divina-
tion, in one of its phases, was practised among the
Hittites, and that they were not averse to rec-
ognizing Assyro-Babylonian gods. Their greatest
debt to the Egyptian civilization, however, is
represented by the cuneiform script, which came
to be used in all their commercial and legal trans-
actions as well as in their international corre-
respondence. With every advance in our knowledge
of the Hittites it becomes more evident that these debts were not left unpaid. It seems clear from a study of the monuments and seal
cylinders that the Hittites exerted a by no means
inconsiderable influence on the architecture, as,
for example, in the well-known bi hihû, and on

the art, a notable example of which is found in the Maia sculptures 1 so they may akin to the proceedings of gods Boghast Kau; while a strong Hittite influence on the religion must be predicated from the large number of Hittite deities forming a part of the personal names found in the Assyrian business documents. 2 That the Hittites exerted an equally important influence on the peoples of the region cannot be doubted, but how far the constant similarity between the two is due to actual influence and how far to racial identity no one may safely say. These and similar questions which meet one at every stage of the investigations may be raised, but even such general hypotheses will continue to be of doubtful value until we have much more complete collections of deities and allied languages has been accomplished.

**LITERATURE.** — For the native inscriptions; L. Masseschmidt, "Corpus Inscri. Hittiticiorum," in JFO, Berlin, v. (1900) nos. 8-6, vii. (1900) no. 3. viii. (1903) no. 3; A. F. Olmstead, B. B. Charles, and E. B. Wrench, "Trees and Sites in the Hauen East," vol. i. pt. 5. 1st. 12, LCIC. The results of the Boghast Kau excavations are given by H. Windisch in LCB, 1902, 907, 426, and by H. Windisch and O. Puchstein in the Hittites, 1907, 277-278, and 1909, 445-446. The next step in the exploration of this part of the region is the exploration of the site of Hittites.

**TRANSLATION.**—The work by E. B. Wrench is based on the work of H. Windisch and O. Puchstein, "Mittels der Hittites, 1907, 277-278, and 1909, 445-446. The next step in the exploration of this part of the region is the exploration of the site of Hittites.

**HJUEN TSIANG.**—See YUAN CHEWANG.

**HOS.**—A tribe classed by Risley as Dravidian or non-Aryan, found in the Singhbhum District of the Chota Nagpur Division of Bengal, where, according to the Census of 1901, they number 386,529. The tribal name seems to be contracted form of the word Aorva, 'man,' which is used by the cognate Mundu and Santal tribes as their national designation, and which appears in various forms in the tribal names Orkon, Kol, Kow, Korka, etc. Risley further remarks that the Mundus and Santals are called Aorva by outsiders; and 'in the case of the Aorva stock whose Has, Mundus, and Santals are sprung has obtained popular recognition, is a slightly altered form, as the distinctive name of a branch which inhabits Singhbhum, and which may now be regarded as a separate tribe. For intermarriages between Hos and Santals would not appear to be common, this is, according to my recollection of the ancient Ogam inscriptions of Ireland, though not so much as to be considered in this form. In this neighbourhood, too, I saw a few cases; but regret to say, I do not retain any description of it, as I did not, at that time, fully appreciate the importance of the informant occurring otherwise than in connection with the Christian religion. The assumption, however, that it is the exclusive property of Christianity is clearly stated in a certain well-established fact' (quoting JASS, 1877, p. 196; JASS xiv. (1877) p. ii. p. 179). '*Of these stones some were raised as memorials to the tribe of the tribe' (op. cit. 187).

**Tribal legends.**—The Hos possess a remarkable tradition concerning the creation of the world and the origin of the human race, recorded by Tickell (JASS iv. (1841) 707), and thus summarized by Dalton (Descrip. Ethnol. of Bengal, 1856): 'The creation was the earth which God made the earth with rocks and water, and they cloathed him with grass and trees, and then created animals, first, those that man demanded, and then fish, and last, all that was prepared for the abode of man, a boy and girl were created, and they have ever since remained at the bottom of a great lake.'

1 Perrot-Chipiez, History of Art in Chaldes and Assyria, London, 1884. 11, fig. 152.

various, and finding them to be too innocent to give hopes of progeny, he instructed them in the art of making clay, which existed in the pastos, and thus the world became populated. (cf. Tyler JC, London, 1909, 1st edn. 1841.) When the first parents had produced twelve boys and twelve girls, Ring Benga prepared a feast of buffalo, bullocks, goats, sheep, pigs, fowls, and vegetables, and, making the brothers and sisters pair off, handed them to the newly married pair to be most relished and depart. Then the first and second pair took buffalo and bullock flesh, and the first and second pair of the Tables are small and wait for the Hittites, however, the next step in the exploration of this part of the region is the exploration of the site of Hittites.

**HOS.**—A tribe classed by Risley as Dravidian or non-Aryan, found in the Singhbhum District of the Chota Nagpur Division of Bengal, where, according to the Census of 1901, they number 386,529. The tribal name seems to be contracted form of the word Aorva, 'man,' which is used by the cognate Mundu and Santal tribes as their national designation, and which appears in various forms in the tribal names Orkon, Kol, Kow, Korka, etc. Risley further remarks that the Mundus and Santals are called Aorva by outsiders; and 'in the case of the Aorva stock whose Hos, Mundus, and Santals are sprung has obtained popular recognition, is a slightly altered form, as the distinctive name of a branch which inhabits Singhbhum, and which may now be regarded as a separate tribe. For intermarriages between Hos and Santals would not appear to be common, this is, according to my recollection of the ancient Ogam inscriptions of Ireland, though not so much as to be considered in this form. In this neighbourhood, too, I saw a few cases; but regret to say, I do not retain any description of it, as I did not, at that time, fully appreciate the importance of the informant occurring otherwise than in connection with the Christian religion. The assumption, however, that it is the exclusive property of Christianity is clearly stated in a certain well-established fact' (quoting JASS, 1877, p. 196; JASS xiv. (1877) p. ii. p. 179). HOBSES.—I. Life.—Thomas Hobbes, known to his friends as 'Malmesburiensis Philosophus,' an original and forceful English writer on political philosophy, was born at Westport, in Wiltshire, on 5th April 1688. His early education was received at the Westport church school, at a school in Malmesbury, and also at one kept by a Mr. Latimer, who is described as a 'good Grecian,' and the first that came into our parts since the Reformation (J. Aubrey, Brief Lives, ed. A. Clark, Oxford, 1686, i. 925). Later, Hobbes entered Magdalen Hall, Oxford, where he became discontented with the traditional learning of the University and turned his attention to the study of men and current affairs. After admission as bachelor on 5th Feb. 1688, he became tutor to the son of William Cavendish, later the second Earl of Devonshire, and began the lifelong intimacy with a family whose social position and political fortunes carried him into that turmoil of public life wherein his opinions were formed. Through the travels included in his residence at Mr. Cavendish's, Hobbes became acquainted with the work of such men as Galileo, Kepler, and Montaigne. This fired his imagination and the study of philosophy; a system of philosophy worked out in the spirit of the new learning, and applied especially to the moral, social, and political problems of human life. He felt his project to be the more urgent because of the political disturbances of his time and the uncertainties of life and fortune incident to the Civil War. Although his original writings and his earliest essays in philosophy, and although his political works probably worked out as a part of his general theory before the Civil War gave it to special impetus, the publication at Amsterdam in 1647 of de Officio, and at London in 1651 of Leviathan, was felt by Hobbes himself to be a matter vitally important for the trend of events. He professed the ambition of a scholar, owned a preference for scientific inquiry secure from the excitations of public life, yet, in spite of self-confessed timidity, sought repeatedly the opportunity to make his writings intelligible, felt by those in power. His contributions to political theory, together with his observations on human nature, are by far the most important parts of his philosophy. His own time and times subsequent have found little of marked significance in his other work. Yet the student of philosophy can find many illustrations of keen insight into logical problems and the theory of science, and the student of literature can find a real treasury of forcible and clear English prose. He died on 4th Dec. 1679, in his ninety-second year, and 'was buried,' as told by James Wheldon, 'in the parish church of Hault Hucknall, close adjoining to the rails of the monument of the grand-grandmother of the present Earl of Devonshire, with the service of the Church of England by the minister of the parish' (Aubrey, i. 360).

Hobbes is described by John Aubrey, his friend and contemporary, as 'six feet high and something better;' with a good eye of hazel colour; with a head of matted form approved by the opening of his eyes; with a face of 'melancholion,' similarly approved; of temper and regular habits; as an harmonious soul and not a woman-hater, although never married; of a sharp wit which was also sure and steady; as one who could not read and 'make a formula' for the public service; 'that if he had read much as other men, he should have been as ignorant as they;' and as a man who 'would have the worst of God's performances' (ib. i. 244, 524).

2. Writings.—The writings of Hobbes show how wide his intellectual interests were. Especially noteworthy is his interest in Greek literature, rhetoric, and mathematics. His translations are vigorous and suggestive. His rhetoric is largely unacknowledged reflection of the age. In his mathematical writings expose his deep interest in the subject and also an incapacity to handle the more difficult problems. He has been described as having squared the circle, and he engaged in controversies which redounded more to the credit of his adversaries than himself. The complete list of his writings is as follows: The History of the Great War written by Thucydides, London, 1629; de Malmesburiensi, Paris, 1639; Inquisition in Cartesii de Prima Philosophia Manuscriptis, Paris, 1641; Tractatus Opticus, do. 1644; Elementa Philosophiae de Cive, Amsterdam, 1647 (two copies were privately printed in Paris, 1643, with the title Elementorum Philosophiae Societatis, Doct. D. Roberti, Paris); Philosophy of Empire: considerations on the government and society, London, 1651; De Homine, do. 1650; De Corpore, do. 1650; Essays on government, London, 1660; Leviathan, London, 1651; Of Liberty and Necessity, 1654; Elements of Natural History and Politicks, 1656, published in English, 1660; The Lessons to the Professors of Mathematics, do. 1659; Questions concerning Liberty, Necessity, and Chance, 1656; Points of the Absolute Geometry, do. 1658; John Wallis, do. 1664; de Homine, do. 1667; Philosophiae Methodologia, Seconda, 1657; Considerations upon the Resolutions of the latter, 1667; or Principles of Geometrical and Mathematical Relations, de la Mettrie, 1667; De Homine, 1667; de Duplicata Cubi, do. 1668; Problematum Physical, 1667; Considerations upon the Resolutions, etc., of Thomas Hobbes, 1668; de Principiis Societatis, 1668; Proportionis Geometriae, do. 1669; Leviathan, 1669; Appendix ad Leviathan, Amsterdam, 1688; De Corpore, 1671; De Duplicata Cubi, London, 1680; Letter to the Right Honourable Richard Howard, 1680; Roundell lantern, or the image of light, London, 1681; Three Papers presented to the Royal Society, 1677; Principles of Geometry, do. 1678; or Philosophy of Space, do. 1678; The Voyage of Ulysses, 1678; Epistolae ad Anthony a Wood, 1677; The Illiad and Odyssey of Homer, 1678; Letter to the Duke of Newcastle, on the Conviviality of the Ancients and Moderns, 1676; De Omnibus Physiologis, 1678; T. Hobbes Malmesburiensis Vitae Curnamani Express, do. 1679, published posthumously; An Historical Narrative concerning Mersey, 1680; Bohemia, as the History of the Cause of the Civil Wars of England, London, 1850 (an edition from a detectable MS was published without the authority of Hobbes in 1679 shortly before his death); T. Hobbes Malmesburiensis Vitae Curnamani Express, 1651; The Whole Art of Rhetoric, 1681; The Art of Rhetoric, 1681; The Art of Sophistry, do. 1682; The Whole Art of Oratory, 1682; A Brief Discourse on the Calling of Leviathan, 1684; Seven Philosophical Problems, 1685; Historia Eboracensis, 1685; A few letters have been published by Moleworth in vol. v. of the Latin Works and vol. vi. of the English Works.

3. Philosophy.—Although Hobbes is best known for his political theory, he himself regarded that theory as a part of a comprehensive and unified philosophy, and as part of his method and principles. His statement in the 'Preface to the Reader' prefixed to his Philosophical Rudiments is a characteristic expression of his point of view: 'I was studying the principles laid down by the ancients, and gathered together their first elements in all kinds; and having digested them into three sections by degrees, I wrote them down, so as in the first I would have treated of body and its general properties; in the second of man and his special faculties and affections; in the third of duties of subjects. Wherefore the first section would have contained the first philosophy, and certain elements of physics; in it we would have considered the reasons of time, place, cause, power, relation, proportion, magnitude, figures, and motion. In the second, we would have been conversant about imagination, memory, illusion, rationation, appetite, will, good and evil, honor and dishonesty, and the like.' What this last section handles, I have now already showed you. Whilst I undertake, order, patience and slowly compose these matters (for I only do reason, I dispute not;) so happened that in the interim, that my country, some few years before the civil wars did war, was boiling hot with questions concerning the rights of dominion and the obedience due from subjects, that I was put into a state of approaching war; and was the cause which, all those other matters deferred, ripened and pressed me from this third part. Therefore it happens that my original design was to be published first in time' (English Works, vol. ii. p. 21).

The Latin titles of his three principal works reflect this general scheme: De Corpore, de Homine, de Civis. These main divisions of philosophy are in their turn subdivided, but his philosophy finds its unity in the conception of bodies and their

...
relations to one another. There are two kinds of bodies, 'one wherein the working of nature is called a natural body, and the other is called a commonwealth and is made by the wills and agreement of men' (46. i. 11). Accordingly, the whole body of human nature, so to say, lies in the elaborate table of the sciences in ch. ix. of the Leviathan, first of all into those sciences which deal with consequences from the accidents of nature natural, and those which deal with consequences from the accidents of political bodies.'

This general and comprehensive scheme of a system of philosophy indicates one of the two chief ideas which are characteristic of Hobbes's thinking. Bodies, that is, things which can be moved, are the elements with which he deals. They are, in the human body, natural, and they move according to laws of motion which are natural to them. There is, consequently, a natural condition or state of bodies which follows from their mutual interaction and attracts any control or manipulation of them. This, in his view, is true not only of inanimate bodies, but also of man himself. There is a natural condition of mind which hearkens to the natural motions. This natural condition may be so controlled and regulated that a commonwealth is constituted. The State becomes the organized control of the natural motions—the dispositions, affections and manners—of men. It is a product of art utilizing Nature.

This is the idea of man which determines his reason is found in his conception of science itself. 'There are,' he writes in ch. ix. of the Leviathan and elsewhere, 'two kinds of knowledge, one of fact, and the other of the consequence of one affirmation from another, and memory, and is absolute knowledge.... The latter is called science and is conditional.'

This 'conditional' character of science does not, however, impair its usefulness. The ability of man to organize his observations in a connected discourse is responsible for all the benefits of civilization.

'The end of knowledge is power; and the use of theorems (theorizing the human body, natural, and properties) is for the construction of problems; and, lastly, the scope of all speculation is the performing of some action or thing to be done. ... Now, the greatest commodities of mankind are the arts; namely, of measuring matter and motion; of making instruments of any kind; of calculating the celestial motions, the aspects of stars, and the time of; of geography, etc. By which sciences, how great benefits men receive is more easily understood than expressed' (English Works, i. 7).

The conditional character of science does, however, involve an important consequence for Hobbes's philosophy of behavior and consequences, with results that follow from accepted premises or initial truths. It is dependent on these premises and truths, and is conditioned by them. So far as we have the chain of possible consequences in mind, there is no source of difference of opinion in science itself which industry, discipline, and method may not remove. The source of controversy is exterior to science itself, in the initial premises from which the consequences are drawn. There are three, the beginning from experience, from that other kind of knowledge which is not science, but fact. If the similar experiences of men were free from variations, from prejudices, and from self-interest, science, so far as it rests on fact, would be free from dispute. But experiences are not uniform. It thus happens that men differ in their opinions, not because of differences in their reasoning, but because of differences in their experiences which reason cannot settle. Such differences can be settled only by mutual agreement, or by what the authority which arbitrarily decides all points at issue. Hobbes does not blink the rigid consequences of this conception of science. While he would commend his own philosophy because of its consonance with every man's experience and its conformity with facts accessible to all, he repeatedly asserts that in questions of fact individual differences may be so great that only authority can settle them.

In these two principal ideas is the idea of a natural order through the control of which all advantages of civilization and all social institutions arise, and (2) the idea of science as a body of consequences drawn from premises which are taken so subject to variation that they must be standardized by authority—the essential things in Hobbes's philosophy are contained. Nature is inadequate for man's use without science and art, and these are inadequate to this service without a constituted authority. The problem of authority would not, however, he a serious one if it did not, that is, involve the whole problem of man's peace and safety. The problem of society becomes the problem of authority. With Hobbes it is the great problem of philosophy and overshadows all his other interests.

Hobbes's contributions to the philosophy of bodies in general do not deserve particular notice. He is influenced throughout by Galileo, and sees everywhere motion and the laws of motion. It is his transference of these ideas to psychology that is first of all significant. Sense, imagination, the association of ideas, the passions, and the will are all conceived and expressed by him in terms of one another, of the other ideas. They are all motions called forth by the reaction and endeavor outside in the organ of sense caused by an event in the object, remaining more or less (16. i. 361). Imagination is 'decaying sense' and illustrates the law that motion, once started, continues until opposed by contrary motion; referred to the past, it is memory. The association of ideas—Hobbes speaks of the 'train of imaginations' or the 'train of thoughts'—arises from the fact that motions which are simultaneous or successive in sense tend to recur as a whole when any one of them recurs. Passions are the 'interior beginnings of voluntary motions,' and will is defined as the 'last appetite in deliberation,' that is, as the last motion in a delayed or suspended series of motions. These ideas Hobbes deliberately opposes to the traditional psychological of his day. They made comparatively little impression at the time, but we can see in them now the first important general statement of the basal position in psychology of a much later day. It is the reacting organism on which Hobbes lays emphasis, an organism which, excited by external stimuli, reacts only after the excitations received have been internally assimilated and organized.

'There is no other act of man's mind, that I can remember, naturally planted in him, so as to need no other thing, to the exercise of it, but to be born a man, and live with the use of his five senses. Those other faculties, of which I have spoken, are of a second kind, and by, and which seem proper to man only, are acquired and increased by study and industry; and of most men learned by instruction, and discipline; and proceed all from the invention of words, and speech. For besides sense, and thoughts, and the train of thoughts, the mind of man has other motion; though by the help of speech, and method, the same faculties may be improved to such a height, as to distinguish men from all other living creatures' (46. iii. 16).

Because life itself is but motion, man can never be without desire or fear, just as he cannot be without sense. Thus, according to Hobbes, 'the continual success in obtaining those things which a man from time to time desires' (46. 51); 'it is not the repose of a mind satisfied.' Nor does this man desire to enjoy once only, but rather to assure forever the way of his future desire; and this he can do only by having the power to do it.
This is one of Hobbes's most important generalizations in view of his theory of the State. He states it metaphysically in these words:

"In the first place, I put for a general inclination of all mankind, a perpetual and restless desire of power after power, that men may be as gods, which was their original end and nature; and the cause of that is not always that a man hopes for a more intensive delight, than he has already attained; but that he is dissatisfied with his condition, and would be content with a moderate life, or power; but because he cannot assure the power and means to live as he would, he loses the satisfaction of the acquisition of more. And from hence it is, that kings, whose power is greatest, turn their endeavours to the securing it as home by law, or abroad by war; and when that is done there succeeds a new desire; in some, of fame from new conquests; in others, of ease and sensual pleasures; in others, of admiration, or being flattered for excellence in some art, or other ability of the mind." (§ 85.)

Associated with this is a second generalization of similar importance:

"Nature hath made men so equal, in the faculties of the body, and mind, that though there be found one man sometimes manifestly stronger in body, or of quicker mind than another; yet when all is reckoned together, the difference between man, and man, is not so considerable, as that one man can thereupon claim to himself any benefit, to which another may not pretend, as well as he. For as to the strength of body, the weaker has strength enough to kill the strongest, either by surprise; or by setting a trap with others, that are in the same danger with himself." (§ 110.)

From this equality of ability men entertain equal hopes of securing the ends they desire.

"To every man desire the same thing, which nevertheless they cannot both enjoy, they become enemies; and the more they desire, the more they will be enemies; which was principally their own conservation, and sometimes their destruction only, endeavours to destroy one another's good." (§ 110.)

Hobbes also states the establishment of the power of the State is by mutual agreement, covenants, and concessions.

Hobbes, however, does not consider these laws to be contrary to our natural passions, as they impose restrictions on our desires. They are obeyed only so long as obedience to them is necessary and profitable, if there is no established power to enforce them.

"Covenants without the sword are but words and of no strength to secure a man at all." (§ 114.) Consequently, mutual concessions and covenants are not sufficient. It is only by force that the sovereign power can be transferred to a single individual or a group of individuals.

This natural condition of mankind is not, as Hobbes expressly declares, the primitive condition in which men once lived. It was never universal. Yet it is man's natural condition if we consider how much people resemble themselves in the absence of a restraining and superior power, and that the function of government is restraint and control, and observe that the police and the systematic guarding of property are evident indications of the suspicion men naturally have of one another.

In other words, man is not naturally what the Greeks called a 'political animal.' Naturally he is an impulsive animal seeking the gratification of his desires, and the security of his life, and finding that this seeking brings him into competition with his fellows. As such his rights are measured and determined solely by his power to secure what he desires. He knows nothing of right and wrong, of justice and injustice, as over against his fellows. There is no law, no injustice, force, fraud, and war are in war the two cardinal vices. Justice, and injustice, are none of the faculties neither of the body, nor mind. If they were, they might be well defined. These are rights that are shown to be in the world, as well as his sense, and passions. They are qualities, that relate to men in society, not in solitude. It is consequent also to the same condition, that there be no property, no dominion, no Empire, and Land, and Trade, and Art, and Race, and Law, and Liberty, and Power, and Honor, and Place, and having an end, that is to say, that each man can get, and for so long, as he can keep it. And thus much for the ill condition, which man by more nature is subject to, than he is capable of being in, though with a possibility to come out of it, consisting partly in the grace and mercy of God, partly in the astringent, consequences of enmity and war, are tendencies which naturally incline men to peace. These tendencies are supplemented by reason, which leads men to agree or attempt to agree with one another and to set up certain rules of conduct which make for peace. These rules suggested by reason Hobbes calls 'laws of nature,' of which the two most fundamental are: (1) 'that every man ought to endeavour peace so far as he has hope of obtaining it, and, when he cannot attain it, that he seek by all possible means to make peace'; and (2) 'that a man be willing, when others are so far as he, so far as for peace and defence of himself he shall think it necessary, to lay down this right to all things, and be contented with so much liberty against other men, as he would allow other men against himself.' (§ 117.) In these fundamental natural laws or dictates of reason Hobbes acknowledges all laws which tend to the establishment of peace through mutual agreement, covenants, concessions, and covenants.

Hobbes, however, that these laws are contrary to our natural passions, as they impose restrictions on our desires. They are obeyed only so long as obedience to them is necessary and profitable, if there is no established power to enforce them.
to enforce it. Hobbes is thus not properly classified as either an egoist or a hedonist. With him morality is wholly a political matter, and politics is wholly the work of reason.

Religion Hobbes defines as 'fear of power invisible, reigned by the mind or imagined from tales publicly allowed' (49, 40). If the tales are not publicly allowed, the fear is superstition. It is thus clear that Hobbes makes religion also a political matter. Yet he recognizes also a 'kingdom of God.' That which is significant in his philosophy here is not his positive content, but the separation of the doctrine of God from all that concerns the doctrine of Nature.

'The Scripture was written to show unto men the kingdom of God and to prepare their minds to become obedient subjects; having the world and the philosophy thereof to the dispositions of men for the exercising of their natural reason' (49, 49).

To enter the kingdom of God it is necessary to believe that Jesus is the Christ and to obey the law of God and the commonwealth. This can be no conflict between allegiance to God and to the State. It is only when the civil sovereign is an infidel that such a conflict may arise, for it is a law of God, found out by reason, that subjects should obey their sovereigns. Yet even here the conflict can arise, Hobbes thinks, only when an infidel sovereign commands a Christian subject to renounce Christ. Then the subject has no resource

HOLINESS.—See Friends of the Temple.

HOLINESS (General and Primitive).—1. Holiness is the great word in religion; it is even more essential than the notion of God. Real religion may exist without a definite conception of divinity, but there is no real religion without a distinction between holy and profane. The attaching of undue importance to the conception of divinity has often led to the exclusion from the sphere of religion of (1) phenomena at the primitive stage, as being magic, although they are characteristically religious; and (2) Buddhism and other higher forms of salvation and piety which do not involve a belief in God. The only sure test is holiness. From the first, holiness constitutes the most essential feature of the divine in a religious sense. The idea of God without the conception of the holy is not religion (F. Schleiermacher, Reden über die Religionen, Berlin, 1798). Not the mere existence of the divinity, but its name, its power, its holiness, is what religion involves. This is nowhere more obvious than in India, where the men of religion, through their art of excelling in holding power, became dangerous rivals of the gods, who, in order to maintain something of their religious authority, were obliged to adopt ascetic holiness themselves (Bv. Bhishm. ii. 5. 4, ix. 1. 6, 1 ff.). The definition of piety (subjective religion) runs thus: 'Religious is the man to whom something is holy.' The holy inspires awe (veçag).

The original idea of holiness is somewhat indeterminate, and applied to individual things and beings. Then the great systems were evolved which are found (1) in barbaric societies, such as the Polynesian, West African, etc.; and (2) in nomistic religions such as the Avestan, and in Judaism, where everything is arranged under the categories of tabu ('holy') and ordinary (profane). The idea of holiness is a part of the philosophy of life. Spiritual religion tries to abolish the outwardness of this distinction and to make it a purely personal one.

Hence it strives to bring the whole of life under the sway of holiness. The prophetic religion in Israel considered the whole people of Israel as holy (Lv. 20. 26). Jews (Is. 56. 5), and by bringing the idea of 'the chosen people' into connection with the idea of holiness. But the ideal of spiritual religion—that every person and every thing should be holy—is an absurdity to primitive men, and to nomistic holiness, because something must be left free for use. In the same way ascetic schemes of salvation presuppose that some people are not holy, religious, in a strict sense. If every one were 'religious,' 'holy,' there would be no families, no future generations, nobody to till the ground, constitute society, and perform the daily labours.

2. Holiness is viewed as a mysterious power or entity connected with certain beings, things, events, or action. Amongst the Africanians everything that exceeds the ordinary capacity of man or the ordinary course of nature is called mana. 1 In some cases, as in this Melanesian mana, the power is expressly reserved for certain beings. Some souls, e.g., have no mana, and, therefore, are soon forgotten and require no worship. In other cases, as with the Iroquoian orcinna, 'this hypothetic magic is held to be the property of all things, all bodies,' etc. (J. N. B. Hewitt, 'Orinna and a Definition of Religion,' in American Anthropologist, new ser., 1902, p. 33 ff.). But in any case only its concentrated appearance in some beings and things is of practical importance. Of the somewhat analogous words

1 From the classical work of B. H. Latrobe, Holiness (Oxford, 1881), this term has been adopted, through L. Macfie, B. H. Maxwell, etc., as the general term for the power working as power, as distinguished from negative holiness involving the conception of danger, interdiction, prohibition, which in current terminology is now designated by the Polynesian word tabu.
which are to be found everywhere in primitive religions, we mention here a few examples:

The Australian tribes (A. W. Howitt, Native Tribes of South-

eastern Australia, London, 1879), the Indian tribes of the ancient

American beaver (e.g., H. Oldenberg, in Anzeiger für indolog.-

und afroasiatische Sprach- und Altertumskunde, III, 1887-88; and K. Schäfer, Godheraus- 

supplement, Stockholm, 1918) the Balta of the Balta; the 

Wurdung, "life-stuff," and the panema, "extraordinary," mys- 

teries of the Malay (O. K. Hill, Malay-Indonesische Studien in dem 

indischen Archipel, The Hague, 1900; W. W. Stanton, Malay 

Magic, London, 1909; G. M. de Groot, Lelaw, Papus, Races of the 

Malay Peninsula, ed. 1909; J. Warnek, Die Religion der 

Balta, Leipzig, 1909): the Balta of the Balta (defined in 

the dictionaries as "indwelling or supernatural power, which 

renders a thing good and effective; the power of a medicine: 

the truth of a word; the efficacy of amulets and incantations, 

the holiness of a thing; etc.;" see A. van Gennep, Tabou 

eclatés à Madagascar, Paris, 1930); the myths of Congo 

languages (longosignifices "medicina, "charm;" R. E. Leman, in 

his forthcoming dictionary); the omens of the Micrones; the 

sac of the Pama (see A. Le Roy, La Religion des primitifs, 

Paris, 1909, and F. H. Tullio, Le Pana, d'après les textes de 

Franz, Mittheil., 1919); the dog of the Eves (D. Wetterwasser, 

Wörterbuch der Deut- 

sprach. Berlin, 1906); the calendar of the Pumacines (E. K. 

Erlach, The Threshold of Religion, London, 1909); the 

sacredness of the Sioux Indians (which was used "indiscriminately as substantives 

and adjectives, and with slight modification as verbs"); which may be translated by "mystery," "power," "sacred," 

"sacrament," "immemorial, although no Eng- 

lish sentence of reasonable length can do justice to the aboriginal 

term wakonda (W. J. Locke, The Sioux 

Indian, Chicago, 1889; O. Holmberg, Native Society, I B.H.M., 

1898, p. 211 f.); the oracles of the in- 

tercourse (denoting a mystical power which is particularly 

great in the aboriginal, in the skillful hunter, in any man or 

animal who reports supernatural events, and which is 

regarded as related directly to singing and to anything used as 

an incantation, or mask, or as well to the ideas of begging, 

praying, orsubmitting"; (R. E. Leman, loc. cit. p. 88 f.); the 

old Norse runa, "look," "success," "prophetic genius," "haste," 

of individuals and of gnomes (W. Grosjean, Le philosophe 

occidental, Copenhagen, 1909; and Oral and Mora, ed. 1915; 

Report of the Commission on the History of the Religion of 

Legends, 1915); the mati, "might," "power," of Welsh folk-lore (men and animals 

can be made "sacred" or "sacred" through evil influences; 

the old Norse said ams-auta, "sacred-stones").

This mysterious holiness is to be found, in the 

first place, in the medicine-man, or priest- 

king, who, according to G. C. Frazer, Lectures 

on the Early History of the Kingship, London, 

1906), and in the sacred formula which is used as a 

spell or a prayer. Further, it belongs to special 

objects which are connected in any way with the 

holy rites and the exercise of religion or magic, e.g., 

the chewninga (tjuringa, Strehlow) of the central 

tribes of Eastern Australia (Spencer-Gillen, 1899, 

1904; C. Strehlow and M. F. von Leenhoff, Die 

Aranda-und Luritja-Stämme in Zentralaustralien, 

pt. ill., Die totem. Kultur, Frankfurt, 1911), the 

buffalo-ceremonies, dance and rattles (the Mexican 

rattle-staff was called chucumasti, "that through 

which one makes strong, powerful" (E. Seiler, in 

Berlin, 1899-90), and other things used in the 

mysteries; the West African mingos, "fetishs" (M. H. 

Donald, At the Back of the Black Man's Mind, 

doakd., 1909); Leman and other missionaries, in Nor- 

denskald, Etnografiska bidragfd av messana mission- 

dören, Stockholm, 1907). It also belongs to relics, 

amulets, divinities, their images, and everything 

connected with them. In a wider sense the mys- 

terious power of holiness is supposed to be 

the cause of everything which is out of the ordinary 

course, and was therefore explained by sac- 

tific purposes—in which case its 

use becomes the worst of abuses, namely, sorcery 

or black art—but constitutes the great treasure of 

the community, identified in its sacred institu- 

tions, in manifold objects, and in its members, who 

derive their life, power, and happiness from the 

general holiness, and at the same time have to 

enlarge and concentrate this common mysterious 

influence through their ritual celebrations and 

manly actions. But the essential connexion be- 

tween the 'sacred' and society does not imply 

that the notion of the 'sacred' is merely a 

kind of objectifying and idealizing of the commu-

nity as a power mysteriously superior to the individual 

(E. Durkheim, Les Formes élémentaires de la vie 

religieuse, Paris, 1912).

The most interesting, with somewhat different 

lines of evolution in proceeding from the most 

primitive stages onwards, and a supposed uni-

formity must not be obscured to obtain the pecu-

liar features of holiness in particular societies at 

the lower stages of civilization. But, as far as we can 

see, the psychological origin of the conception of 

holiness seems to have been the mental reaction 

against what is startling, astonishing, new, terrify-

ing. This reaction may have expressed itself in 

a or an excess, e.g., by individual experiences 

influenced the collective mind, which by degrees 

created forms of language which gave more durable 

expression to the mental reaction in face both of 

what was really new and of certain often recurring 

phenomena which never cease to startle and awaken 

a vivid emotion. A motley series of beings, things, 

events, and actions are named by such words as 

the great one, the frightful, the dangerous, the 

curious, the successful, the divine, etc.; and—what 
is still more significant—those things are surrounded, 

by a natural relation to a supernatural rites and 

interrelations. The first point is that these 

startling things are not to be treated lightly. It 

is evident that the idea of the extraordinary (this 

seems also to be the original meaning of the Semitic 

qdt; q; below, p. 761 b), as distinguished from the 

ordinary, already exhibits a tendency towards the 

conception of the supernatural. Primitive man is 

unable, indeed, to conceive anything beyond or 

higher than Nature; yet the term 'supernatural' 

may perhaps supply the best conception of what 

the holy means to him. 

'Holiness' so conceived is the most valuable 

source of health, strength, food, success, influence; 

at the same time, it involves a constant danger. 

Hence the rites to which this conception gives rise have either a positive or a negative character.

3. The positive rites have as their object the 

acquiring, concentrating, and utilizing of holiness. 

1. Augmentative rites are to the greatest extent 

employed in order (a) to produce or augment the 

supply of food—e.g. Australian initiation and 

ceremonies among the Aborigines, in which the holy power may be concentrated in the last sheaf, a cake, an image, an animal, a tree, or a man. Phallic or sexual religion is also 

momentarily concerned with the well-being of the 

horses and of the field. In order to secure fertility, the 

art of producing rain and sunshine was exercised; 

and fishermen meats a sacred wind (v. ROBINSON, 

the power is accomplished through the power of holiness, 

natural or acquired; at the same time a certain 

technique is elaborated, with impersonal rules and 

laws. (b) The power may also be acquired in other 

ways than those connected with the procuring of 

ordinary food. One may receive it through blood, 

which is either drunk or smeared over the body. 

It may be consecrated by saliva or breath. 

Parts of beasts or men imbued with the mysterious 

thing may be eaten; or men, perhaps one's own 

sons, may be killed in order to serve the mysterious 

influence of life. Sacrifice served as a means of 

endowing with holy power, before it was brought into 

connection with a divinity, in the way of communion 

or by being considered as a gift. The sacrifice exer-

"sacred")

"sacred")
conception may prevail. The sacrifice communicates holiness or power. Therefore the images of the gods are smeared with blood, the precious fluid which is the religion of blood par excellence—that of ancient Mexico—the men pour out their blood from tongue or members in order to strengthen the gods, and the divinities are purified. The usual symbol of the joyful diet of blood from the victim. Blood appears with great frequency in the Mexican sacred rites; it enabled them to increase their deities in every case, with the addition of the cutaneous and the secretion of the...eons. The Zulu says *wuku* (with reflexive *a*), "to abstain from." In the Bantu languages the word *wuku* had a meaning of 'sacred object'; *washi*. A more specific word is the Zulu *thombe* (a shaman), *zulu* (a chief), *gini* (to give), *kwe* (to show respect), *to show special reverence," in observing several rules of ritual. The Zulu has to *thombe* his handkerchief, but not by any means in the native tongue, *thombe* is not, *wuku* is "not to be touched, or to be avoided."

The close connexion of the tabu with the mysterious power is found in the common idea of extraordinariness. Tabu is thus what is new, *es*.

5. Later the tabu is often connected with the soul—a fact which admits of different explanations. The relation to the soul is sometimes secondary or imaginary, *e.g.* the reason urged by the Batakas of Sumatra for not cutting all the hair of the child is connected not with *beau* (soul), but with *beau* (the hair, the human head, the secret society, or the priesthood, the priestess, or the priest). The secret society is itself a tabu, and may be difficult or impossible to draw in every single case. Nevertheless, it is required by the essence of the tabu-holiness. Thus, a sacred being is subjected to a multitude of tabu laws, the priest or the tabu interdict. He must not be disturbed, or the sea, or the lake, the sun must not shine on him, he must not touch the ground, even his own head, nor eat with others, etc. Why? Because the tabu is danger and may be injured or taken away! It is not so much a case of personal danger for the soul as of precautions against disappointing the precious holiness concentrated in the chief. Therefore he is himself dangerous to others who cannot bear contact with him. In death the necessity of distinguishing the two motives—concern for the soul and for holiness—is more evident. (a) A dead body, either of man or of beast, is dangerous. A Kaffir who has killed a python is purified by a water. A Laplander becomes taboo for three days after having killed a bear. At the ritual murder of the bear among the Ainus in Siberia, in Lapland, or of the bull at the Bosphorus in Athens, the killed animal is kept over and the killer undergoes a shaman punishment. This may have something to do with fear of the ghost. But it may also depend upon the holiness of the animal or its kinship with man. The case is clearer with the widower in British New Guinea, who must hide himself like a wild beast and go about armed with a tomahawk against the dangerous soul of his dead wife. (b) Love, not fear, may also lead to special precautions. Pointed objects and knives must not be used after death, lest they may harm the dead. The Chinese even avoid using their eating-sticks during a certain time. Those rules do not belong to the tabu. (c) But it is impossible to explain the tabu to be interdicted and warned against mourning prohibitions in general, by fear or love of the dead person. The killing of a man or a beast shows the possession of a man which makes it necessary for others to avoid him and his weapons and spears, and for him to submit himself occasionally to precautions analogous to those always observed by the sacred person. The body also suggests uncanniness. Hence its im
purity, and the withdrawal of the mourners from ordinary life. In Polynesia they must not carry food to the mouth with their own hands for ten months. The object is to be subjected to this rule, because of the holiness of his head. In this instance concern for the soul is excluded as an explanatory basis and the Kaffir and its purification mentioned above may both depend on their being charged with 'holiness,' wana. Or take the interdict as to preserving sacred hair and nails or remains of meals. The reason is lest some one may take them and harm or kill their original owner by means of sympathetic magic, according to which the whole can be influenced through a part of it. This has nothing to do with tabu or holiness. But the case has another side. If the person to whom the hair and nails or the meal belonged is holy, it is not to touch them, because they are charged with holiness. The holy man in question must also take precautions against losing any of his precious power. Knots are often forbidden because they suggest complication and difficulty. Sympathetic magic uses them in order to cause hindrance and harm. The prohibition can acquire a secondary relation to the holiness. 'Kamerdonos in Zone, e.g., was forbidden to have any knots on his clothes, because they might be a hindrance to the benefit action of holiness.'

6. It is, in fact, the essence of the tabu-interdict that it is not merely the avoiding of a definite danger by avoiding its cause (this may be a soul, sympathetic magic, the interest of society, or anything else); rather it amounts to an unconditioned and unreasoning 'you shall not.' The imperative character of duty, which Kant called the 'category of the divine in man, is characteristic of primitive tabus, in spite of the differences as to the content of the prohibition or commandment. There is something mysterious, dreadful, about the danger of breaking a tabu (Maret, op. cit.). The aborigines cannot always tell the reason why a tabu is forbidden or why a certain object is holy. It is a fact, and a most important one. Of course, the tabu originates to a certain extent in natural observations. The rules can sometimes be traced back to a real practical interest and use. At a later rationalistic stage of religion, Jews, Parsees, and Hindus, with the help of Western scholars, have traced the tabus to the vast improvements and discoveries in hygiene, breeding, and agriculture. Moses, Zarathushtra, and Manu, to whom the tabu systems were erroneously ascribed, have been praised as early discoverers of the conditions of health. This is not completely devoid of truth, but it misses the characteristic of tabu, which is not a religious idea the supernatural rather than the rational. The common custom of isolating the woman in child-bed in a miserable birth-hut, and handing her food on long poles, or of subjecting boys, and sometimes also girls, to barbarous tortures at initiation, is not a matter of hygiene. It is the danger due to holiness that demands such practices.

7. The unreasoning awe of tabu appears in the consequences of breaking it. (a) Death or sickness immediately follows. An Australian died when he heard that he had lain upon his wife's blanket. A Hova youth in Madagascar fell into convulsions when he learnt that the meat he had eaten belonged to an animal holy to his kin. How were the relations of the dead and the dead? It is told that he had been feeding on dog cutlets or human kidneys? The origin of death and sickness is often explained by the breaking of a tabu. The Pangoo in Bengal were immured until some one entered a pool which was tabu. Pandora's box was not to be opened; when it was opened, diseases came out. The effect may be a direct one, just as fire burns or poison kills, without the intervention of death. The intervention of disease constitutes a secondary explanation. With the development of worship, tabu-rules come to be regarded as divine laws and the society sanctions the tabus through punishments inflicted upon the guilty, for holiness is the very source of life and strength to society. Such was the cause of the massacre of Marian and his crew in the Pacific in 1772. They had tried to catch fish in a holy place. In 1890 the men of the ship Boyd were murdered in New Zealand, because the captain had treated the son of a chief, i.e., a tabu person, in an ignominious way. Animals as well as men are killed if they defile holy ground by entering it or in any other way. In 1 S 18, 1 Ch 13th, Josh 6th, death or plague follows directly (in Josh 3rd, the holy object exercises its power otherwise). In Lv 10 God punishes the breaking of a tabu. Even where a divine punishment is referred to, the original meaning sometimes seems to have implied an immediate consequence of touching the holy, as Nero's illness after his sacrilegious bath in holy water, in Jerusalem. In late times, the punishment is inflicted by the community, as the Ewe used to burn alive a man who had killed the holy python. Such punishments become a large portion of sacred law everywhere (cf. K. Krueger, De Romano superi sacris, Kölnberg, 1913). Sometimes, as in Ex 19th, Nu 19, we do not exactly know whether the penalty, death or death of death is referred to the inherent holiness of the thing, to God's vengeance, or to judicial punishment.

(b) There are also milder consequences, punishments, which as in the case of the divine in man, is characteristic of primitive tabus, in spite of the differences as to the content of the prohibition or commandment.
completely alone. The corpse requires to be moved and attended to in some way. One cannot help seeing and meeting strangers. The firstfruit is full of mysterious power, but it constitutes the very sustenance of men. How is the precious power to be appropriated without incurring risk? By taking action and rendering oneself immune in some other way against the danger of holiness. Such precautions form the kernel of a set of primitive rites which, later on, assume another meaning. The most important are: (1) 'poltiness' ceremonies vis-à-vis strangers, which, in no doubt, natural kindness accounts for much, and is closely connected with the tabu fear (E. Westermarck, M7, London, 1906, I, 595 ff.); (2) funeral rites (see Death and Disposal of the Dead); (3) puberty rites and wedding ceremonies, which are intended at once to indemnify against the danger of sexual holiness-tabu and to secure its efficacy in the matter of fecundity; (4) fruit-fruit rites at the birth of children and animals and before the eating of the first crops in the spring (see FIRSTFRUITS). In these ceremonies as well as in sacrifice (H. Hubert and M. Mauss, Mélanges d'Histoire des religions, Paris, 1909; cf. Satapatha Brâhmanâ [SBE xii. etc.]) and other rites mentioned above, we can sometimes discern lewd introductory rites designed for intercourse with the holy in order to avoid its dangers; and averting rites, which are intended to remove the holiness before resuming ordinary life.

By the natural taboo (a) in the strength and coherence it gives to society, for the 'holy' supplies a perpetual centre of gravity, manifested in holy things, beings, places, and actions, for the individual or his family; (b) in the more or less approaches 'the holy,' but he is not completely out of touch with it. To use the tabu system as a complete tabu. Such are shamans, priests, kings, and others. A chief in New Zealand was charged with holiness to such a degree that no one was allowed to touch him, even if he were in mortal danger. If he breathed on a fire, it could not be used for cooking. The vessels from which the Mikado used to eat were, as a rule, afterwards destroyed. If another man ate from them, his mouth would swell. Sometimes an animal is taboo for a whole people, as the pig in Syria, and the cow in India. Sometimes the taboo extends only to a clan or a kindred. Words are taboo, such as names of higher human or divine beings, holy or dangerous animals. Occasionally we find a whole tabu language, which is laid at initiation, and used on special occasions, as in the mysteries, in the chase, in fishing, in reaping, and in war. Objects and places belonging to the sacred rites, to gods, or to holy men or secret societies are taboo. The holy man or animal is divine, and is worshipped in proportion as real worship is instituted and the notion of divinity validated. They may be worshipped even during life, but especially after death, when the general awe of ghosts enhances the conception of their man. Sometimes the holy power of a man is destroyed only after his death, through actions attributed to his soul. Such a tindalo receives worship among the Melanesians (Cordington, 125 E.) or the dead die in the grave. The Vedas in Ceylon are concerned to know whether a dead man's spirit is a pâta, i.e., a powerful or holy one whom reverence and prudent did that with the other (G. E. Religions, Cambridge, 1911). The same idea underlies the system of relics and the worship of saints in higher religions. Their holy, wonder-working power is utilized and revered. Certain days are full of danger. Work, pleasure, and undertakings which are carefully specified

---

**Note:** The text appears to be a discussion of taboos and tabu systems, often referred to as 'sacred' or 'holy' areas in various cultures, and how these systems are enforced through rituals and prohibitions. The text touches on the idea of holiness and its implications in societies, as well as the consequences of breaking these taboos. It also references the idea of religious and spiritual power being linked to certain individuals or objects, and how these powers can be either honored or feared. The text mentions various cultural practices and beliefs, such as the use of taboos in societies, the protection of holy objects, and the divine or supernatural aspects associated with certain animals or people.
must be omitted on these days. The institution of sacred or tabu days is known to several primitive peoples in modern times, and was familiar to ancient peoples in different forms, e.g., the Egyptians, the Babylonians, and the Romans (dea nova). Such was probably the origin of the Sabbath (Ex 19:10; Nu 16, June 44:10). On the Great Day of Atonement in the OT, the Messiah gave to the tabernacle a new positive character of rest after work (otherwise R. Kittel, Gesch. des Volkes Israel, i. Leipzig, 1912) 825); but in later Judaism the day recovered something of its gloomy tabu-character (cf. J. Hahn, Sebenehali and Sabbath bei den Babylonieren und im Alten Testament, Leipzig, 1909), H. Webster, Best Days, Lincoln, Nebraska, 1911).

Our abstract and conventional conception of time and space as measure is foreign to primitive man. To him time is, or rather time is, real and concrete. Some days and occasions contrast as extra-ordinary or tabu with the ordinary days. Such holy days, e.g., festivals and dangerous days, mark epochs in the general flux of existence, and give rise to the religious calendar. Thus the primitive apprehension of time originates in the conception of the holy. In a similar way tabu places awake a distinctive emotional notion of space.

(b) After death and on special occasions during life every one is tabu. The sexual life is accompanied by strange estranging feelings and uncanny phenomena. In hunting and warfare even the ordinary man experiences the mysterious power, and must submit himself to restrictions and observances that are not required in his everyday life, but which are often identical with such shaman, priests, and kings are bound to observe always. We often encounter the notion that women dying in child-bed, fishermen drowned, or hunters killed during the performance of their perilous work, and warriors slain in battle (the ear of the Norse Valhall) obtain a better lot after death than other mortals. If two realms of the dead are recognized, these men and women come to the place reserved for 'better people,' i.e., the men who showed courage, wisdom, and noble in life, whereas the common man retains his dull and inferior condition also after death. It is tempting to adopt the explanation of this which attributes a higher moral value to the chief female and male vocations in life. But the reason, no doubt, lies in the holiness, or mana. The mysterious power that confers good fortune and the aids to its works also after death. Some men possess it always, ordinary mortals only in childbirth, war, hunting, and on certain other occasions.

(c) Some tabus affect every one, others only certain people. Mother-in-law and son-in-law are tabu to each other, also men and women in general to a certain extent (A. E. Crawley, The Mystic Rose, London, 1902, p393). A man may not marry a woman of his own clan, or even of any other clan indifferently. In Australia the totem (see TOTEMISM) as a rule is tabu to the members of its clan; in North America this is not so.

(2) Artificial holiness is acquired through ascetic exertions, such as fasting and abstinence from sexual life, mortifications, etc. (see ASCETICISM). The ascetic brâhmaid, 'exerts himself.' Indian literature abounds in accounts of the superhuman powers acquired through her life of asceticism. Making, the Brâhman to the gods and arousing their admiring envy. Such a state of artificial holiness is designated in several religions and languages as 'heat' (Skt. teṣa, Gk. θύρμα, Testament der Ewe-Sprache) the magic power is called dea, 'heat.'

(3) Holiness and impurity are contagious, as we have already seen (e.g., Ex 19:10, Nu 16, June 44:10). His tabu character was strictly defined for each relative of the deceased, and it was stated through how many people the contagion is able to penetrate.

(4) Besides this involuntary communication of holiness, a holy man or a body of men has the power of imposing tabus. This has been largely used by individuals and by societies for selfish purposes, in order to augment their property and influence (H. Webster, Primitive Secret Societies, New York, 1900, p. 65 ff.). In Melanesia, nobody dares to touch fruits on a piece of ground where soles (tabu-marks) have been put. Holiness throughout its history has seldom proved a bar to the acquirement of wealth. The ruling class in Fohnesia, the are, have a special reputation for skill in utilizing their tabu. In Madagascar, European settlers have complained of the administrative use of tabu in order to prevent improvements. But it must be added that the tabu has also often been deliberately applied in cases where the public interest required a prohibition. The Hana i land by its government tabooed the cattle even as late as 1846, because the diminution of the stock had aroused legitimate anxiety. Gluttony during the great festivals in Tonga and Hawaii made it necessary to taboo pigs, coconuts, and other foods for several months. Sometimes language indicates the difference between natural or acquired holiness and imposed holiness. On the Banks Islands the former is called rongo, the latter tapa or tambu. In the New Hebrides the former is called tatau, the latter goguma, etc.

A more important division of holiness is recognized in some primitive languages, which have special names for the good and for the bad varieties of holiness. Thus, in addition to ordinary magical processes, the brandedAUSTRALIAN Aborigines (Aranda) have a bad, noxious 'power, arunguulth, which is used to injure enemies. Tregear speaks of 'unclean tabu.' Amongst the Huron Indians the orontha gradually fell into disuse, giving place to the Tokan, the bad species of mystery or power. Besides the 'evil eye' there is the wholesome influence of the territorial holiness of the earth (ERW IV, 503; cf. S. Seligmann, Der böse Blick, Berlin, 1910). This distinction must not be confused with the differentiation of tabus into holiness and impurity.

11. Holy and unclean.—In primitive religion one cannot tell whether tabu is holy or unclean. It simply means, 'Thou shalt not'—interdiction and danger. Later on, the tabu becomes either holy or unclean. Primitive man does not realize this difference. The original meaning of tabu as including both survives in language. The Latin sacrum (French sacré) means 'holy' as well as 'sacred.' 'Holy' and 'impure' are combined in the Greek ἅγιος, which is then differentiated etymologically: ἅγιος means 'holy,' 'initiated' (in a secondary sense), also 'pure,' 'clean,' 'immaculate,' permitted; ἄγιος means 'accursed,' guilty.' The pig was also tabu to the Hindus, the pig was tabu among the Greeks. In the ancient Greek religion, the swine, were holy, according to Athenaeus (ix. 18 [p. 375 f.]), and must not be eaten. To both Jews and Christians the pig was tabooed by a letter of Plutarch, the Greeks did not know whether the Jews abhorred it or worshipped it. The mysteries alluded to in Is 10:19 ('tabu') seem to imply the holiness of the swine, i.e., its flesh, but its skin, were holy, according to Athenaeus (ix. 18, p. 375 f.), and must not be eaten. To both Jews and Christians the pig was tabu. At present it is only in Persia and Turkey and a few parts of South Russia that the swine are eaten. According to Lucian, de Dea Syria, 54, pigs were not sacrificed or eaten, the swine was de-
HOLINESS (General and Primitive) 737

tested by the Syrians, but 'some believed that . . . they are not occurred (evens), but holy (Ievos). They identified this belief with the abhorrence of the Muhammadans for the unclean beast and called the bear 'father Adam.' Then Silva-worshipping Brahmana taught them to identify father Adam with Siva, and worship the cow as well as the bear (J. C. G. W. v. 21). In the OT, despite the strongly monotheistic differentiation of holiness from impurity, there are still some cases where it cannot be decided whether the tabernacle implies holiness or impurity: Lv 10 (cf. Ex 28:31; Lv 19:26; cf. 177). To an outsider, holy things and beings appear rather as something evil and malevolent through the mysterious dread that they inspire. Eastern settlers or travelers often call the whole sacred system of the natives 'devil-devil.' In the Congo the first missionaries translated 'devily' or 'devil's beast maker,' also 'the one that causes death.' Now Nasami is universally used as the term for God. As we have seen, something of the same ambiguity belongs to the primitive conception of holiness. There is no doubt whatever, at this stage, as to whether a being or a thing inspires awe or not, whether it is 'supernatural' or 'holiness,' whether it belongs to the proper sphere of religion and mystery or not; but the distinction between good and bad in a way which sometimes comes very near to obliterating the distinction essential to religion—between holy and profane—is at times almost imperceptible. It is not possible in every case to discover why a tabernacle becomes holy or unclean. Tabernacle connected with death and with sexual life becomes unclean.

Association with a divinity renders the tabernacle, e.g., the animals, which were kept in the temples and temple-precincts in Egypt, Syria, Greece, etc. In Israel the idea of God was such as to include the divinity, i.e., holiness, of animals—a notion highly developed in the religions of Egypt and India. Where the differentiation is complete, the holy and the unclean retain the character of taboo (forbidden), in opposition to the profane (common) and the clean, both of which may be freely used. Origen (Or. Nos. 40. 50, etc., genesis, 'common,' had not a bad meaning at all. The old correlation finds its classical expression in Lv 10:2, Exk 22:14: 'on the one side, holy and unclean, on the other, profane and clean.' The important thing in religion is to know and observe the distinctions: holy, profane, clean.

Three principal factors have a tendency to modify or reverse that order, namely, the evolution of language, morals, and other practical aims and demands of culture, and the conception of divinity. The conception of the same same and 'unclean,' on the one hand, 'clean' and 'holy' on the other hand. The question is whether 'clean' or 'holiness' suggests the divine or the practical and utilitarian purposes prevail, as in the Avesta, 'clean' eclipses 'holy.' Where the idea of the Godhead prevails, as in the OT, 'holy' is keener than 'clean.'

(a) The 'common' becomes despised and had. Language operates in this direction—that which is much 'used' becomes 'use-worn.' Thus 'profane' has a tendency to approach towards 'unclean.' This is seen in the evolution of the word 'profane.' The verb Γυναικεῖον, 'to give out for use,' assumes more and more the sense of 'to profane,' 'to unhallow,' and approaches the meaning of an author so deeply versed in sacred and clerical language as Ezekiel sometimes identifies 'profane' with 'defile' (43:7, cf. v. 22; 20:2, cf. v. 4), although, as a rule, 'to profane' is used in connection with the holy, the Sabbath (29:1, 31:22, 32:3, cf. 44:18, etc.), the Temple (7:12, 23:18), (of the sanctuaries of Tyre), etc., but see 23:22, 32, the sacrifice (29:2, 31:30, etc., but see 44:18); 'defile' is mostly used of idolatry (21:14, 22:10, 30:3, etc.; 29:4, 30:2, 30:9, 30:18, etc.) of the Sabbath, and 30:22 of the Passover 31:22 of the dead (44:18, 39:22, cf. 45:1). Likewise in Ex. and Lev., instead of being opposed to each other, 'profane' and 'unclean' become either occasionally related or as indicating a wider circle of objects and a narrower circle within it (e.g. Lv 8:1, 10:10, 20:21, Ezek 22:7). Something of the same evolution may be traced in ξειλαστικά, which in LXX and the NT acquires the sense of 'unclean' or 'forbidden' (see below, 'Greek' section); in γενεσίας in the secondary meaning of 'vice,' 'mean'; in γενεσίας in the primary meaning of 'vice,' 'mean'; in γενεσίας in the secondary meaning of 'vice,' 'mean'; in γενεσίας in the primary meaning of 'vice,' 'mean; in γενεσίας in the secondary meaning of 'vice,' 'mean; in γενεσίας in the primary meaning of 'vice,' 'mean; in γενεσίας in the primary meaning of 'vice,' 'mean.
HOLINESS (General and Primitue)

extent, in Roman heathenism, 'holy,' instead of yielding place to 'clean,' became the chief term, whereas 'clean' and 'unclean' were largely used as religious names in the New Testament, and became the chief terms in the New Testament.

(c) Especially in Semitic cult and priestly Godhead, the word 'holy' had an overwhelming power. This is nowhere felt so strongly as in Mosaicism (with its descendents). Notwithstanding the emphasis laid upon holiness in the prophetic passages from Moses onwards, 'holy' was never displaced by 'clean' or identified with it. The moral feeling contributed to widen the gulf between holy and unclean. The supernatural and active power in the Godhead worked still more in this direction. Here the divinity became 'holy' in an emphatic sense. Between the holy and the unclean an intermediate realm was left of indifferent and permitted, unprofane (or 'common') and 'clean things,' with a tendency in 'common' to decline to 'unclean,' and in 'clean' to rise towards 'holy': clean common unclean.

But even in those passages in the OT where this process has advanced furthest, it never identifies 'holy' and 'clean.' 'Holy' is too mysterious, powerful, and divine; God's holiness being His own essence, so that tabernacle religion, to man (cf. Ex 33:10), implies danger; there is nothing so much to be feared as the divine. Here not every danger inherent in the tabernacle has been banished to the unclean. To be near not to be free but the light in the OT religion is, above all, Jehovah (Ex 19, Is 5:7, Jer 3, Ex 20:19-20, and Psalms). Tabu-holiness has been its most important contribution to the history of religion by finding room for the awe-inspiring, supernatural, and yet active character of God characteristic of Mosaicism. A reciprocal action was exercised by the idea of holiness and by the Mosaic-prophetic conception of God.

12. Pure.—In the Avesta, as well as to a great extent in India, the chief concern, as regards tabu, is not the danger of being the clean by the unclean. The tabu 'holy' has lost its inherent supernatural awfulness and power. There is no instance of a man being visited with immediate destruction, without interference of man or society, through coming too close contact with the holy-tabu. The words that come nearest to the idea of personal holiness (Skr. rit), do not suggest any tabu or supernaturalness. 'Pure,' not 'holy,' has become the characterizing word of religion. In such Indian languages as have not borrowed the word and the conception from the Arabs, Christian missionaries are at a loss to express 'holy' in its proper sense. The Skr. word 'rit' (Is 5:1, etc.), transfers the idea from the sphere of Biblical to that of Indian religion. The same term, 'pure,' is used in India for 'saint,' e.g. in the names St. Matthew and St. Paul. Man has more to say, the divine-tabu less. We may compare the Talmudic 'Holy Scriptures defile the hands' with the anxiety of Parsi modele lest the glance of an infidel should defile their holy Scriptures. The holy-clean must be protected rather than the holy-dreaded. The mysterious awfulness of Jehovah has no analogy in the Avesta, where everything was divided between the Good One and the Evil Terrible One. Even in heaven and earth, no. 1 of the mystery of tabu than Avestanism. To both, cattle are tabu-holy, i.e. they must not be killed; they are unclean after death, and thus may not be eaten. In India, even Parsis cut animals as wages for work). Among both peoples the cow is revered.
HOLLINESS (General and Primitive) 739

India, purification is effected by water, earth, air, smoke, etc. (Inst. of Vepus, xxiii. 88, 91). There also earth has a special cleansing power (Mama, v. 126). Hot water mixed with sulphur and gold-chloride is used to bathe in (Vend. v. 48, 54), and so has the well-known ordeal by melted metal. The tests by water and by fire occupy an important place among the ordeals prescribed by the Sûtras (Sûtra 124, etc.). Ceremonies whereby men are not to be hindered in their work by defilement. To the group of practical exceptions belongs also the rule that impurity does not arise when the whole country is afflicted with a calamity, or in times of great public distress, such as an epidemic or a famine (Inst. of Vepus, xxiii. 37, 54 f.).

In the Avesta the point of view is more consciously conceived and more consciously carried out. A house with priests, castes, woman, children (Vend. iii. ii. 47), the cultivating of corn, trees, irrigation and draining (Vend. iii. 4, 23 f., 39 f.), good appetite (iii. 35, iv. 45), the giving of food (v. 93 and other places), the lifting up of the burrows of Ahura Mazda's animals (iii. 22), the building of bridges (xiv. 18), etc., are co-ordinated as purifying means with, e.g., the holy cow of the country and the dog. Likewise the uncleanness is assimilated to acts injurious to industry and culture.

There is a stock of tabus common to Brahmanism and Avestanism (see, e.g., the Laws of Manu, v., and the Institutes of Vepus, xxii. 6d.) but the difference becomes obvious (a) in that more consistent utilitarian tendency of Avestan purity which, of course, is not carried out, but permits many barbarous tabu-rites, e.g., at child-birth, to remain; (b) in the high appreciation of purity, cleansing, goodness, which is conspicuous in the Dakhshuša (v. xxviii. 5) as the greatest thing next to birth (Vend. v. 21, x. 18); the law of purity is the foremost word (v. 24 f.); the devils tremble before the man that smells of purity after death (xix. 28); and (c) in the dualistic systematizing of clean and unclean. Something of the same process occurs in the OT. The Tabernacle, the temple, the priestly dress, the rest (Ex. 38, 20, Dn 23-24) and the delight (Nah 8:1) of the Sabbath.

13. Exceptions to tabu-rules are due, in most cases, to practical considerations. The claims of real life prevail to a certain extent over the rule of infection by tabu-boly (Hag 2:24) or tabu-unclean (Lv 11:24), but see Hag 4:24. According to Vend. v. 30, a bird that has eaten of a corpse does not defile the tree on which it perches; v. 54, infection of the dead brought by wolf or fox does not spoil the irrigated field; v. 44, a dried-up cistern does not harm; v. 71, a woman may drink pure water although she has brought forth a still-born child. The motive is assigned in Vend. v. 6; otherwise the whole of the splendid world would become polluted, because of innumerable creatures dies. In the case of the cow becoming clean of herself in one year (Vend. vii. 78 f.), we cannot decide whether this is due to her own self-purification or to the provision of a reason for it. To the same category belongs the universal rule that the corpse of a clean animal does not defile (cf. Lv 5:11). According to Indian law, the hand of an artisan, things exposed for sale in a shop, food given to a Brahman (if not by a Sûdra), or food obtained by begging, which a student holds in his hand, the mouth of a woman in the process of kishting (Vend. vi. 10), or a dog when catching a deer, and flesh of animals killed by a dog, etc., are always pure notwithstanding the logic of tabu-infection (Mama, v. 129 f., Inst. of Vepus, xxii. 48 f.).

Carpenters and other workmen are not to be hindered in their work by defilement. To the group of practical exceptions belongs also the rule that impurity does not arise when the whole country is afflicted with a calamity, or in times of great public distress, such as an epidemic or a famine (Inst. of Vepus, xxiii. 31, 54 f.). In these instances the penalty of laws of cleanliness is temporarily abrogated by the hard necessities of life. Quite different are the exceptions noted in the Avesta which are due to the logic of dualism. The corpse of the adorers (holy, pious man) is unclean, because his death means a defeat to life and holliness. On the other hand, the wicked becomes pure after death; his death is an advantage; the infection of a dead body diminishes with the holliness of the man during his life until it disappears in the case of the ungodly (Vend. v. 35 f., xiv. 1 f.). For the real trouble is a dead dog is impure (vi. 1). On the contrary, there is the clerical exception in Brahmanism of the priest Brahman being so holy as to remain clean also after death. The indwelling holy power overpowers impurity in different degrees according to its strength. The impurity lasts ten days for a Brahman; it lasts twelve for a Ksatriya, fifteen for a Vaikya, and a month for a Sûdra (Mama, v. 83). On several occasions the indwelling power is exempt from any defilement. The taint of impurity does not fall on kings, at least while engaged in the discharge of their duties; on devotees performing a vow; or on a man engaged in a sacrificial ceremony (Mama, v. 94; Inst. of Vepus, xxii. 48 f.). When the ceremonies connected with the installation of the monument of a deity or marriage rites have begun, impurity is powerless—it cannot arise (Inst. of Vepus, xxii. 53). The explanation of the fact that no impurity attaches to the king—viz., because he incarnates the eight guardian-deities of the world, who cause and remove purity and impurity of mortals (Mama 24:23)—is evidently of a secondary character; the real reason is found in his own power of holliness or in the claims of practical life.

14. Holiness and morals. In the tabu-interdicts, what we call moral rules and ritual or 'superstitious' commandments are intermingled without any attempt are differentiated. In India the laws belonging to the fetish Mâni contain such prescriptions as not to eat newly slaughtered meat, not to steal, not to lie, not to stand upright when stirring the contents of a pot, not to whistle in the twilight, not to drink palm-wine without having a cap on the head (E. Nordenskiöld, pp. 125, 166). Amongst the rules prescribed for a sudâkshara, a young Brahman who has not yet completed his studentship, are, e.g., not to carry water and fire at the same time, not to drink out of his joined hands, not to touch a raw meat which a calf is tied, always to speak the truth, to conduct himself as an Aryan, to take pleasure in the Veda, never to hurt anything, to restrain his senses, etc. (Gautama, xxii. 515 f., cf. Apastamba, i. 11. 30 (SBE ii. 92 f.). In ch. 125 of the Egyptian Book of the Dead the departed protests to his purity: 'I have not oppressed the feeble one . . . I have not given my bread to any one hungry . . . I am not a murderer . . . not an adulterer . . . The ritual of the Great Purification, O-kuru, in Shinto ceremonial, counts
among `heavenly sins': to destroy the divisions between the rice-fields, to put sticks in the rice-fields, to flay living animals backwards; and among `earthly sins', lynching, incest, and castration; killing the cattle of another, sorcery (H. Weiper, 'Das Schintogetz der grossen Reinigung,' in *Mittel. der deutschen Ges. für Natur- und Volkerkunde* Orientas, 1901, suppl., and *Ancient Japanese Rituals,* in *TASJ* vii. ix. xxvii. 1). Similarly, the Law of Holiness in Lv 19 includes fear of mother and father, prohibition of theft, of deceit, of lying, as well as prohibitions against eating anything with the blood or rounding the corners of the head.

This tabu imperative covers a very wide area in primitive and barbarous culture. In higher civilization a process of reduction takes place. At the same time the idea of obligation is deepened. The separation of ethics from ritualistic rules belongs to a higher moral appreciation of holy and unclean, represented in Greece and Rome by thinkers and poets from Herodotus (frag. 5, in H. Delia, *Fragmente der Forschungskritik* in *Reliqu.,* 1916, i. 75), e.q. Diogenes of Sinope (cleaning water cannot take away a moral fault any more than a grammatical blunder). An Initiated thief has a better lot in Hades than Epaminondas! [Diog. Laert. vi. 2. 42; Cicero, *De Leg.* ii. 10. 24: `animi labes nec diuturnat evanesce nec omnibus ullo melius est petere, etc.']. These protests probably referred to the cathartics of the Mysteries (q.v.) and to Orphism (q.v.). Orphism started as a special, higher holiness! Plato revised and united into an ascetic and pedantic ortho-life, destined to secure a happy life after death. This was the theory of the great Pythagoras also, with whom a higher moral rivalry prevailed. In opposing the later purifying Orphic charlatans, and in taking cleanliness in a purely moral sense (=righteousness) (Plato, *Republic,* 360 f.), Plato expressed the ascetic tendency of the Apollonian, Orphic, and Pythagorean cathartics (the soul must be delivered from the body even in this life through spiritual occupation, `philosophy,' and completely after death (Phadlo, 66 ff.), and the religious character of ethics as a means of salvation and happiness in the life to come (Phadlo, 86 f.; a more positive appreciation of morals prevails in the *Rep.* and other dialogues). The moralization of holiness and cleanliness is urged in the OT by Amos and other prophets, and distinctly stated by Christ (Mt 7:1). The general principle of Lv 19, etc., `Ye shall be holy; for I the Lord your God am holy,' is repeated in 1 P 1, but applied to moral duty in a different sense, and the quotation `holy people' in 1 P 2:9 has no ritual significance. The paradoxical claim laid on the whole people to be holy (see above, § 2) receives a new and higher significance in this way, and can be fulfilled without any limiting or clericalizing of life.

In India, Buddhism opposed an outward and non-moral conception of purity. At the end of the *Dhammapada,* a set of verses explain what it means to be a true Brahman:

*Vasudhara* (a Brahman) by his platted hair, by his family, or by birth: in whom there is truth and righteousness, in whom is bliss, he is a Brahman. What is the use of platted hair, 0 fool! what is the raiment of goatskins? Within thee there is nothing, but the outside thou makest clean! (*Dhammap.,* xxviii. 196 ff.; 355 x. 941, p. x. 941). According to the *Sutta-Nipata,* Kamala explained the sin of eating raw flesh (*dhamagandha*) in this way:

*Destroying living beings, killing, cutting, binding, stealing, sexually unchaste, a thief, a liar, a drunkard, a false and deceitless, worthless reading, intercourse with another's wife, this is dhamagandha, but not the hair.* Neither the flesh of fish, nor eating, nor nakedness, nor treason, . . . purify a mortal who has not com- *mitted his doubt* (*Sutta-Nip.* ii. ii. 3 (341), ii. ii. 11 (340), in *355 x.* ii. ii. 94 f., p. xii. 941).

In Buddhist polemics against Brahmanism the question of purifications always played a part: if water could cleanse from sins, frogs and tortoises, water-snakes and serpents would have had to exist and be happy. The title of the Pali work, the *Visaluddha-magga* of Buddhaghosa, *The Way of Purity,* has nothing to do with ritualistic purifications (H. C. Watters, *Sacc.,* ii. 1913, p. 164 f.). The momentous step in the evolution of holiness and purity consists in this, that holiness becomes a personal quality of the deity and of man, instead of being a substance in things as well as in wills. This evolution is favoured by autonomous moral refine- ment, as in Greece, India, and China, and also by the preponderating conception of the deity as an ethical will, as in Mosaicism. The latter process has had the greater importance for the internal history of religion. As to man, holiness retained its aspect of something supernatural and divine in the NT, notwithstanding its being moralized and per- sonalized. In Jesus, holiness does not depend on man, but is a divine influence. But the making holy of man by God obliges man to strive for per- fection.holiness and purity as an ethical idea, or moral sense, so far as religion implies ethics. It is used of God (Jn 17:11). His name (Lv 1), the city (Mt 4), and temple (1 Co 3) connected with His service; of God (Lk 1); of the angels (1 Co 1) and of the prophets (Lv 1), the men (Mt 27) and women (1 P 3) of old; of John the Baptist (Mk 6); and of Christians (1 Co 1, 1 Co 1, 1 P 2). bound, therefore, to purity in life (Eph 1, 1 Co 6). The language is ritualistic (Ro 12:11) or ascetic, see above, § 7 (c). Jn 10:17; the sense is personal and moral, but it is entirely kept under the sway of religious sacredness.

15. In the Church the `holy' never became a merely ethical word, but chiefly suggests divine, supernatural power. The original meaning of sancta and sanctus in the heathen Roman language re- calls tabo, `well defined,' particularly `sanctified,' as far as sanctus, sanctus meant definitus, destinatus, determinatus (G. Link, *De voces sanctae* usus pagano, Königsberg, 1910, p. 9). It was used of things, places, and men, withdrawn from the common and ordinary (see below, 'Roman' section). In early Christianity all the faithful were called `saints,' because they had been selected and separated by God from the worldly and common humanity— which meant also essentially a moral change and a severe moral obligation. But the word sanctus was used especially (deanized, v.e.) and the quotation `holy people' in 1 P 2:9 has no ritual significance. The paradoxical claim laid on the whole people to be holy (see above, § 2) receives a new and higher significance in this way, and can be fulfilled without any limiting or clericalizing of life.

In India, Buddhists opposed an outward and non-moral conception of purity. At the end of the *Dhammapada,* a set of verses explain what it means to be a true Brahman:

*Vasudhara* (a Brahman) by his platted hair, by his family, or by birth: in whom there is truth and righteousness, in whom is bliss, he is a Brahman. What is the use of platted hair, 0 fool! what is the raiment of goatskins? Within thee there is nothing, but the outside thou makest clean! (*Dhammap.,* xxviii. 196 ff.; 355 x. 941, p. xii. 941). According to the *Sutta-Nipata,* Kamala explained the sin of eating raw flesh (*dhamagandha*) in this way:

*Destroying living beings, killing, cutting, binding, stealing, sexually unchaste, a thief, a liar, a drunkard, a false and deceitless, worthless reading, intercourse with another's wife, this is dhamagandha, but not the hair.* Neither the flesh of fish, nor eating, nor nakedness, nor treason, . . . purify a mortal who has not com- *mitted his doubt* (*Sutta-Nip.* ii. ii. 3 (341), ii. ii. 11 (340), in *355 x.* ii. ii. 94 f., p. xii. 941).

In Buddhist polemics against Brahmanism the question of purifications always played a part: if water could cleanse from sins, frogs and tortoises, water-snakes and serpents would have had to exist and be happy. The title of the Pali work, the *Visaluddha-magga* of Buddhaghosa, *The Way of Purity,* has nothing to do with ritualistic purifications (H. C. Watters, *Sacc.,* ii. 1913, p. 164 f.). The momentous step in the evolution of holiness and purity consists in this, that holiness becomes a personal quality of the deity and of man, instead of being a substance in things as well as in wills. This evolution is favoured by autonomous moral refine- ment, as in Greece, India, and China, and also by the preponderating conception of the deity as an ethical will, as in Mosaicism. The latter process has had the greater importance for the internal history of religion. As to man, holiness retained its aspect of something supernatural and divine in the NT, notwithstanding its being moralized and per- sonalized. In Jesus, holiness does not depend on man, but is a divine influence. But the making holy of man by God obliges man to strive for per- fection.holiness and purity as an ethical idea, or moral sense, so far as religion implies ethics. It is used of God (Jn 17:11). His name (Lv 1), the city (Mt 4), and temple (1 Co 3) connected with His service; of God (Lk 1); of the prophets (Lv 1), the men (Mt 27) and women (1 P 3) of old; of John the Baptist (Mk 6); and of Christians (1 Co 1, 1 Co 1, 1 P 2). bound, therefore, to purity in life (Eph 1, 1 Co 6). The language is ritualistic (Ro 12:11) or ascetic, see above, § 7 (c). Jn 10:17; the sense is personal and moral, but it is entirely kept under the sway of religious sacredness.
Here we encounter, in a higher sphere, the same test as is applied by primitive peoples—to learn whether the departed possesses the power of holiness. It is called by the Greeks, whether his bones when tomahawk, or his soul, when invoked in prayer, are capable of healing sick people, revealing guilt, and accomplishing other wonders. The chief questions held were: did she exist? did she attain to moral perfection? but, in fidelity to the essence and tradition of religion, was there something divine or supernatural about a man? (cf. F. Champier, Quo aut quae suum accidit? Paris, 1910). We may refer to the important role played in the process of canonization of Joan of Arc (introduced in 1869, ended by the decree of Pius IX. on 12th April 1909) by certain healing miracles performed by her on nuns who implored her help, even at the end of last century. The underlying thought is that holiness means revelation of divine power. Only religion might recognize that supernatural manifestation, not in cases of auto-suggestion or the like, but in creative genius, high personal idealism, and ready obedience to the mysteries of divine guidance and to vocation. Joan of Arc could well stand that more severe test. See, further, Hamburger (J.T.G. 1821).

16. Holiness has had its most notable history in Western civilization with its antecedents. There it has become the greatest word in religion, the last word of piety so far, as well as the first. Western observers, who form their conception of religion from Biblical or Islamic examples of piety have an exaggerated perception of the absence of awe in Eastern religions. In the West (using this term in a wide sense, to include Persia; cf. Wessely-Czartoryski, Die Erbauungskunst, Leipzig, 1904, § 61) the unawakened sense of the holy has accompanied religion all through its history and has gained strength on the heights of religious experience. But at the same time mystical feelings, which still survive in modified forms in the lower strata of civilization and in highly cultured and deliberately organized minds, still draw their nourishment from a primitive conception of the holy.

17. The imperative and unconditioned character of the holy, being anterior to any definite idea of divine commandments (cf. T. T. Plessen, Der Ursprung der Religion und Kunst, in Globus, Ixxxi. [1904], 321 ff., 355 ff., 375 ff.), cannot be derived from it. Nor has it originated in pre-Christian theogony, but in conceptions of negative magic (§ 67) or of hygiene. To say that the categorical tabu is an initial mistake of human psychology is an exaggeration, only axiological appreciation. The time-honoured sociological theory recognizes the momentous importance of society to religion. But, as far as lower culture is concerned, the derivation of the holy institutions and beings from a mysterious apprehension of society seems to be artificial. In the higher culture, holiness and mysticism most consciously put their ideals beyond society. According to the history of religion itself, the conception of the tabu results, as we have seen, in the idea of the supernatural.

LITERATURE—This is indicated in the article. See also T. W. Walzer, Geschichte des Hellanen im griech. Welt, Wiesbaden, 1916; E. Fabius, Die heilige Kunst. Rouen, 1910.

NATHAN SÖDERBLOM.

HOLINESS (Greek).—In its ordinary use 'holiness' is a word both of religions and of high ethical significance. But, while it is always a religious word, it has often little or no ethical connotation. Thus, in primitive religion, holiness is often conceived as physical, though doubtless with an implicit sense of something deeper. It is an essentially religious concept, and it is natural to regard as sacred things reckoned divine, or, on the negative side, it is freedom from bad spirits, which are conceived as physical, and against which physical precautions are taken (W. R. Smith, Rel. Sem., London, 1894, p. 161; J. E. Harrison, Hymns to the Sun, Cambridge, 1908, pp. 39, 186, etc.). Sometimes, again, 'holiness' indicates what is merely 'formal, as the relation in which a particular place stands to a divine being or to a region of the human freedom to enter within it (W. R. Smith, 118, 180). It would be easy to illustrate these non-ethical conceptions, as well as the tabu customs founded upon them (cf. Soderblom's art. HOLINESS above), from the history of Greek, especially primitive Greek, religion. But in the present article we shall deal only with the higher conception of holiness, meaning thereby, on the one hand, the moral perfection of God, and, on the other, human goodness viewed in relation to God. How and how far did the idea of holiness, as thus defined, enter into Greek religious thought?

1. Greek national religion.—From at least as early as the Homeric age two contrasting types of worship prevailed in Greece. The one was devoted to the sunny deities of Olympus, the other to the gloomy chthonian, or under-world, powers (cf. W. M. Ramsay, in H.D.L. v. 148). The latter is usually regarded as the earlier of the two, and, though it never became a part of the national religion, was preserved in local cults throughout the historic period (cf. Harrison, p. 11, and passim; L. R. Farnell, O.G.S., Oxford, 1898-1900). In spite of serious defects, it contained much of ethical value, which, as we shall see, is an important element in Greek religious thought. Meantime our concern is with the religion which centred in the Olympian gods and goddesses. Canonicalized by Homer and Herodot, these became the object of national or pan-Hellenic, as distinct from merely local, worship.

For our present purpose we may consider this national religion, first in its popular, and then in its literary, aspect.

1. Popular religion.—The Greek religion was one of easy trust in the gods, of simple and serene piety. It was satisfied to acknowledge the blessings of the gods by the payment of traditional observances. Such a religion was prone to become 'the art of giving something in order to get more in return, a species of haggling in the celebral market' (F. B. Jevons, Introd. to Hist. of Rel., London, 1886, p. 224), and this is in fact the account given by Socrates in the Symposium (Plato, Euth. 14) of the current conviction of negative magic (§ 67). Plato may have rated the popular religion too low (cf. F. B. Jevons, Introd. to The Makers of Hellas, by E.E.G., London, 1903, p. 128) and we must often have expressed real gratitude. But it is certainly true that the idea of moral purity as a matter vitally affecting man's relations to the gods was foreign to the spirit of Greek religion. That spirit was essentially one with the spirit of Greek art, which derived its inspiration not from the supernatural, but from the visible, world. Hence the Greek gods were but magnified men, superior, as G. L. Dickinson points out, in external gifts such as strength, beauty, and immortality, but not in spiritual or even moral attributes. This being so, the average Greek did not trouble about his spiritual relation to the gods. 'To the Puritan, the inward relation of the soul to God is everything; to, the average Greek, one may say, as it was nothing' (Dickinson, The Greek View of Life, London, 1896, p. 18). Greek ethics no less than Greek religion was dominated by the artistic spirit. And hence human goodness meant to the Greek not indeed a relation to the gods, but an inward harmony. 'The good man was the man who was beautiful—beautiful in person (p. 184).

2. Literary ideas.—Here we shall consider
HOLINESS (Greek)

and the moral aspect in which the gods are presented to us in Greek literature. In Homer and Hesiod, from whom popular religion drew its chief inspiration, the gods were said to find any idea of divine holiness. It is true that Homer often presents the gods, especially Zeus, in a noble and even sublime moral aspect. Yet their conduct, as reflected in the myths, is often an outrage upon morality and the reason that moral perfection was not felt or seen to be an essential part of the divine nature. 'Never,' says Nægelsbach, speaking of Homer, 'is an epitome applied to the good nature, indicating a consciousness similar to that with which the Bible speaks of the holiness of the true God' (Homer. Theology, Nüremberg, 1891, p. 81). Not only is polytheism 

gradually purged of its grosser elements, not only is there an approach to monotheism in the more

ascetic aspirations of Zeus over the other gods (J. Adam, Relig. Teachers of Greece, Edinburgh, 1868, p. 58; J. P. Mahaffy, Social Life in Greece, London, 1875, p. 94), but Zeus himself is regarded in a more spiritual aspect. This is particularly true of Aeschylus and Sophocles. In Aeschylus 'we find an ideal of divine righteousness precisely parallel to that of Hebrew prophecy' (L. Campbell, Relig. in Gr. Lit., London, 1866, p. 390). Sophocles, on the other hand, comes nearer the Christian standpoint in the more gracious aspect under which he views the divine justice. 'Zeus is no longer solely the awful dispenser of doom, but "he hath Mercy for the partner of his throne"' (A. M. Adam, in Early Ideals of Righteousness, Edinburgh, 1910; Soph. Ed. Col., 1896; cf. Philo). The idea of divine purity, however, was especially associated with Apollo (L. B. Farquhar, in HDB v. 145). And the purity of the divine nature is measured by the purity which Apollo demanded of his worshippers. At first it was freedom from homicidal guilt, and such as could be attained by ritual; later it was viewed as inward, and as extending to all the relations of life (ib. 145, 147; E. C. G., Makers of Hellas, p. 355 ff.; cf. esp. the story of Glaucus, in Herod., vi. 96).

2. Mystical conceptions of holiness.—From the ideas of holiness proper to the national religion we pass to others, different in kind, and likewise more profound, introduced by the new spirit of philosophic inquiry. These influences were widely diffused by various teachers, and by the end of the 5th cent. had revolutionised the religious thought of Greece. It is of the epoch of those epochs in the history of our race which mark a wide-spread access of spiritual vitality (p. 127). Greek philosophy was undermining traditional belief in the national thought. Where truth had been sought for by mythical rite, including a sacrament (such as was regarded as an act of union with the divine. Such a sacrament as we need describe, however, was the character of the Orphic movement, which powerfully affected Greek religious life from the 6th cent. onwards. Although it probably owed much to foreign influence—indeed, its chief mystery, the Orphic doctrine of the 4th cent., was a development of a religion which appeared to a religious instinct already potent in the old Athenian religion, previously mentioned, namely, to its profound sense of evil seen in the loss of the perception of the supreme happiness, and in the rites of purification (ib. 24–29, 162). It should be added that philosophy and mysticism were to a large extent the outcome of a single movement. Orphism had its speculative side, while philosophers like Pythagoras and, at a later time, Plato were steeped in mysticism. There can be no doubt that speculation and mysticism had much to do with the growing spirituality of the national religion (cf. HDB v. 147), but they were both foreign to its spirit. We have now to examine conceptions of holiness which were essentially mystical, though they were to some extent reflected in Greek philosophy.

In doing this we are duty-bound, and chiefly concerned with the human aspect of holiness. It is true that Greek philosophy sometimes lays stress on the goodness of God. Thus we find in Plato (Resp. ii. 379 A) that the fundamental features of the teaching of Pythagoras and of Plato. Probably Pythagoras owed it to the influence of the mysteries, as it is closely related to the essential kinship of the human and divine natures, which is a cardinal doctrine of Orphism. 'The Pythagorean ethical doctrine... has a thoroughly religious character: to follow God and to become like Him is its highest principle' (Zeller, Pref. to Socrates Phil., London, 1881, i. 719 ff.). It is, however, the sacrament which, though it is hinted at by Socrates, occupies a prominent position in the teaching of Plato, whose 'conception of the ethical and... is... assimilation to God' (Zeller, op. cit. 158; for Plato, cf. Theol. 176 B, Laws, 718 C, Tim. 29–30). We cannot here attempt to trace fully the influence of this idea in Greek literature, but we may say that it is reflected in the cardinal doctrine of the Stoics, that man should live according to Nature—which, in their view, was only another name of God.

Holiness as communion with God.—But, again, the relation to God implied in holiness is often thought of as communion. This aspect of holiness is reflected in the Orphic doctrine of the Orphic god which the Orphic regarded as the goal and crown of the spiritual life. The god in question was Dionysus Zagreus, who was born again after his disembarrassment by the Titans. There is here a signification that Dionysus, though admitted to the Olympic pantheon in his character as a wine-god—a name foreign to Orphism—was later regarded as Orphic, as he does in this his Orphic aspect, to the class of
chonian powers. Like the worshipper in that old Orphic age, Orphic prophecies delusions from evil, but his conception of evil was more ethical. And, while to the former purify meant freedom from divine anger, to the latter it meant union with the divine in this high Orphic sense is ἁγιότης. The words ἀγίος and ἁγιάζω also refer to holiness, the holiness that comes of consecration—in the former case, to the powers of the lower world, in the latter, to those of Olympus. But in both the consecration is thought of chiefly in its negative aspect, as prohibition or taboo; it is the direction to unseen powers, in which the idea of the blessing readily passes into that of the curse. On the other hand, ἁγίος and ἁγιάζω are words of positive content. Their prevailing sense is that of freedom, which to the Orphic meant freedom from the moral or negative part (Harrison, 57 ff., 805 f.). Consecration (ἁγιάζω), perfect purity issuing in divinity, is . . . the keynote of Orphic faith, the goal of Orphic ritual (cf. 419).

We have been dealing with what may be called the mystical aspect of holiness. But in this sense especially holiness may be said to involve the element of love, which is itself an aspect of goodness. It is just here, however, that we see the limitations of the Greek idea of holiness. Even the Orphics, though steeped in the mysticism of love, did not perceive that holiness and love are really inseparable ideas. Accordingly, in actual religion he turned to Dionysos, in mystical dogma to Eros, in doctrine to the Graphic the Creator of all things; especially he is thought of as the source of life, and of life's ecstasy (cf. Harrison, ch. xii.). But he was, as Orphic doctrine shows, he is a poetical as much as a religious conception. Yet the Orphics did unconnectedly associate holiness with love, since they showed that the pathway to be taken lay through a mystical union with the divine.

Orphic views had a deep influence on Greek literature. Of this, so far as concerns our subject, two illustrations may be given:

(a) Euripides—Euripides is certainly not to be described as an exponent of Orphism. On the other hand, the Bacchae, whatever may be its central motive, is full of Orphic mysticism.

No other ancient poet shows so rapturous a feeling of the kinship between man and nature. The very title is "Thrilled with ecstasy" in sympathy with the frenzied votaries of the god (Mac. 82 f.). This god of the abyss, eating throughout the whole of nature, both inorganic and organic, making the universe into a living, breathing whole, and we are stirred with a new sense of union with the mystery that surrounds us" (J. Adam, 817).

And if the Orphic longing for spiritual freedom, seen in lines like the following:

1 Happy be, on the weary sea
Who hath died to commerce and the heaven.
Happy who hath risen free,
Above his striving!

(Ex. 91 f., Murray's tr.)

Finally, holiness is personified in the chorus beginning: "Our adored deity (Bacch. 871). It will be seen that she is addressed by her Orphic name, and J. E. Harrison refers to her as 'Hecia, the real Heavenly Justice, she who brings Right and Sanction and Freedom and Purity all in one' (op. cit. p. 507). Nor is her aspect less lofty in Murray's exquisite free rendering of the opening lines of the choruses:

1 Then immediately on high:
Then Recording Purity,
Then that stoopeth, Golden Wing,
Earthward, manward, plying,
And veil with all its mighty shawls,

That an idea of holiness as high as it is mystical is reflected in the Bacchae may be safely gathered from these citations. At the same time, it is important to remember that what we have before us is not a monothetic, still less a Christian, conception of divine Holiness. The ground note of religious feeling in the Bacchae, here as elsewhere, is pantheistic. Holiness is, indeed, personified by the poet, and, so regarded, is one among many divine beings. But in its religious and ethical significance it is simply an aspect, profoundly realized, of the divine running through the whole of Nature.

(b) Plato.—But the Orphic view of holiness is most fully reflected in Plato, although to some extent modified, chiefly by being rationalized. We have seen that Plato described the ethical and as assimilation to God. But he also taught that perfection consists in communion with participation in the divine, of which, in the Platonic view of the divine, the soul is an essential part (p. 438), 'the theory of likeness is only a kind of explanatory gloss' (cf. Plato, Parm. 182 D). It is in the Phaedo, that the theory of participation in the divine nature (cosmic, etc.) is most fully developed. In the Symposium, on the other hand, Plato describes human perfection under the imagery of love. It is the soul's marriage with her ideal, or it is the beatific vision of the unities of the real world of an eternal world. It must, indeed, be observed that in Plato the soul does not enter into direct relation with the Supreme Being, 'the Good' (cf. Resp. vi. 508 E, 509 B, with Tew. 28 C), but only with the Ideas, to which, however, he also attributes a real transcendental existence (Resp. v. 478 A ff.; Resp. 57 D ff.; and Aristotle's account of Plato in Met. A 6, 987b 29 987b 10). Again, the relation is predominantly intellectual. Even the love described in the Symposium is primarily an intellectual one.

But, on the other hand, the Ideas are in very truth the Platonic equivalent of Gods' (J. Adam, 431); while to Plato true knowledge of the good grasps the real and abiding. And wisdom is Plato's highest good, is an act, primarily, indeed, of the intellect, yet affecting also every part of the soul. Lastly, Plato marks an advance in Orphism, in that he is one and the same divine being whose perfection the soul shares, and after which its love aspires.

In Orphism and in Platonic speculation we reach the highest Greek conception of holiness. It does not lie within the scope of this article to discuss its obvious limitations. It must suffice to say that the loftier Christian conception depends upon a nobler and more satisfying conception of God, as a supreme Father, who enters into direct personal relations with His children, and who the goodness is at once perfect holiness and perfect love.

LITURGIA.—This is sufficiently indicated in the article.

HOLINESS (NT and Christian)—I. NEW TESTAMENT DOCTRINE.—The NT continues and completes the most spiritual teaching of the OT prophets and psalmists with respect to holiness (cf. Semitic 'sart'). The background to Christian doctrine, however, is still pietist and legalistic, and many instances of the ceremonial conception of holiness appear in the NT writings. Inanimate things or places, such as Jerusalem, the Temple, the inner sanctuary, the Scriptures, the Mount of Transfiguration, are spoken of as 'holy' by virtue of its special association with God. Indeed, the whole NT terminology on the subject is directly borrowed from ceremonial sources, in respect of altar, sprinkling, oblations, putting away sin, and the like. But this ritual phraseology is now given an inward spiritual signification, its form being "having been sanctified only 'unto a time of reformation' (He 7:12). Christians themselves must now be "veritable temples, priests, vessels, and altar gifts, sanctified for the offering of purely spiritual sacrifices" (Ro 12:1; 1 Co 6:1; 1 P 5:2; 2 Ti 2:24). Thus the emphasis in the conception of holiness becomes increasingly ethical, having advanced from the outward to the inward, from the
negative to the positive, from the merely ceremonial act to the moral and spiritual motive.

An interesting illustration of the passing of the word "holiness" from the ceremony in 1 Co 7:1, where the unbelieving husband is spoken of as being "sanctified", to its "sepulchral" use in 1 Th 4:5, where Paul urges the church to prove that the holiness of a Christian transmits itself forthwith to those who are associated with him ("in Christ"). It occurs in this sense in 2 Cor 11:2, Tit 1:14, 2 Pet 3:11, and 1 Pet 2:2. For study of the Greek terms used in the NT to designate holiness and kindred ideas, see HEB, s.v. "holiness" and "sanctification"; for the extension of the conception of holiness to things and places, see ARTS. CONSECRATION and HOLINESS (General and Primitive); and for a discussion of ritual purification as a part of the Christian practice, see C. P. Farnell, The Evolution of Religion, London, 1906, pp. 128-132.

Partly, perhaps, because of these ritual associations, Jesus makes very little use of the technical vocabulary of holiness. He prefers the prophetic form of expression, 'Be ye perfect, as your Father in heaven is perfect' (Mt 5:48; cf. Dt 18:13), to the more formal formula, 'Be ye holy, for I am holy' (Lv 11:44).

Jesus avoided almost entirely the usual OT designation of God as the 'Holy One' of Israel, except in the phrase 'Holy Spirit'. The reason appears to be that Jesus regarded the LXX translation of many of His words, and the same thought to be real holiness—negative and temporary. True "holiness" is applied to spiritual things, and is to be positive, not negative. It is to consist in imitating the Holy One, not in washing, nor in abstaining from meats, but in being, as He is, "perfect in will and deed, benevolent and beneficent to all" (S. J. M. Abbott, The Son of Man, Camb., 1910, p. 868; see also H. Montefiore, The Synoptic Gospel, London, 1909, p. 537-538).

It is, then, in moral likeness to God that man's perfection in holiness consists. The NT has no hesitation in applying the same term to both God and man, and in bidding us 'be holy as he is holy'. God is holy, because, as the absolute moral Reality of the world, separable from all evil and infinite in every excellence, He is pledged by His own nature to secure a perfect and loving righteousness everywhere, even at the cost of redemption. Man is holy when he is brought by grace into that relationship to God by which the Divine righteousness may be honoured and conserved. The progressive ethicizing of this idea constitutes the Biblical revelation, and Christ's advance on the OT teaching in this respect consists in His own unique conception and manifestation of God. "God is the Holy Father", being who freely loves and saves His guilty children, not only without any sacrifice of His Divine sanctity, but even by His own sacrifice of Himself. This combination of holiness and love in God constitutes His Excelling glory. The holiness hinders us and forbids an unethical presumption on His kindness. The Fatherhood attains so completely by forbidding a despairing dread of His commandments. And the acknowledging of this essential glory of the Father, by a reverent hallowing of His name in life and service, must ever be bound up with the coming of His kingdom and the doing of His will on earth as it is done in heaven.

This characteristic NT association of the holiness of God with the Divine Fatherhood recurs in an important passage, Heb. 10:29, where God is spoken of, in the language of the home, as a Father chastening His children 'that they may be partakers of His holiness'. Here, too, we have a breaking away from the more negative OT view of the Divine holiness. God disciplines us through suffering, that we may enter into that Holy relationship of Consent and Communal Love (or Love-for-Good) in which true holiness consists. On the meaning of God's holiness and its relation to holiness in man, see F.P.R., s.v. 'Hallelujah! God is AT'; "Sundays-Headlam on Ro 1:7", and Hort on 1:11-12.

Man's holiness thus consists in a perfect moral soundness, the consecration of all his powers and opportunities to the worship of God, and the realization of his gracious purposes in history. Of such a perfect holiness Jesus Christ Himself is the unique example. For this very purpose the Holy Father consecrated Him and sent Him into the world, so that He was holy from the beginning (He 10:10); and in the same purpose Jesus steadfastly consecrated Himself to the end (Jn 17:18). Through an eternal Spirit He offered Himself without blemish to God (He 9:14). The result was something more than mere sinlessness. It was the full presentation, in the perfection of obedience to God Himself, of the holiness of the Father's own holiness, through the pouring of the Spirit without measure upon Him, and His own perfect purification of human guilt (He 10:14) Christ both fulfilled and abolished the whole sacrificial system (He 10:19-20), and became unto men 'sanctification' (He 10:10), the objective ground or warrant of the believer's new standing of holiness before God. Through the one offering of His body on the cross He 'perfected for ever them that are being sanctified' (He 10:14), i.e. He effected in principle the complete sanctification of His people in the eternal future, rendering them independent of every other sacrifice (He 10:14).

Further, the holiness of Christ, which conditions that of the Christian, also guarantees it. 'Both he that sanctifieth and they that are sanctified are all of one' (He 2:19). Being separated unto God in baptism, believers find themselves washed, sanctified, justified in the name of the Lord Jesus (Ro 6:4), and, entering into all the privileges of the old covenant on a new plane, they know themselves to be an elect race, a royal priesthood, a holy nation, a people for God's own possession' (1 P 2:9, Dn 7:18). Such believers are already called 'saints', not because of their attainments, but because of their new standing as regenerated or 'sanctified in Christ Jesus' (1 Co 6:11), who is the encompassing sphere, as it were, in which the whole process is begun, continued, and perfected. Having Him as Holy Spirit, they themselves are holy, earmarked, destined, and set apart from everything profane, as belonging to God's kingdom, although as yet they may be no more than babes in Christ, or even carnal.

It still remains, however, that this preliminary implicit hallowing of the innermost personality shall become explicit in a holy character and manifest itself in every sphere of daily conduct (cf. Hort on 1 P 1:15). The Christian must work out in practice what he already is in principle, since deliverance from the guilt of sin through justification involves deliverance from its power through sanctification. There is thus a growth of holiness represented in it (1 T 2:12). The NT is explicit in emphasizing the ethical nature of true holiness, its contrast to all licence and uncleanness (Ro 6:19; 1 Th 4:4), Christians must consecrate their bodies as well as their souls; and all sins against the body, which is God's temple, are tantamount to sacrilege (Ro 13:13; 1 Co 6:18). Stress is also laid on the importance of our co-operating effectually with the power of God (2 Co 7:1, Jn 4:14, 1 P 1:21, 1 Jn 3:3). Yet the whole process is spoken of as wrought by the Holy Spirit in his joint work with us (Ro 6:17, 1 Co 6:20; Eph 5:26), and is connected with our faith (Ac 10:38; 2 P 1:3).
Indeed, the two agencies are regarded as
complementary and inseparable (Eph 1, 2, Ph 2, 16, Tit 3, 8). The Spirit sanctifies. Nor is NT holiness a merely
negative or self-regarding sinlessness, an ascetic
purity or abstention from known sin. It implies
the presence of activities understood, with God’s
goodness in the realm of daily life. As such,
Christian holiness is necessarily a social grace,
and it ripens many gifts and augments many idio-
syncrasies of character. So impossible is the
perfecting of holiness in isolation that the NT never
contemplates a single "saint," but speaks constantly
of "the saints" or a "holy people." The root of
Christian holiness is faith, and its flower is love;
and the sphere for the cultivation of this holy
love in Christ is His body, the church.
Christian Church (1 Co 12, 28; Eph 1, 25, Col 3, 22).
The final goal of the Christian life is complete
holiness, the deliverance of the soul from the guilt,
penance, and power of sin, as also, through its perfecting in holy love (1 Jn 1, 9; 2, 3). It is the teaching of John that this
follows inevitably from the believer’s dwelling in
Him who is the negation of all sin and its de-
stroyer, and who came not only to impute but also
to impart righteousness, even as He is righteous.
We may the D-"gospel" of the Holy Spirit abide
in the child of God, the kinship to Satan is
necessarily annulled, and the Christian need not,
must not, does not, and cannot sin, since it is im-
possible that he who is begotten of the holy spirit
should sin in the same breast. Whether John is here speaking
of an actual attained experience (G. G. Findlay,
158-64), or of the general implications of an ideal faith (P. T. Forsyth,
Christian Perfection, London, 1910, pp. 1-49), is
a matter of dispute. Strictly speaking, only the
eternal Son was fully perfect. Even in regenerate
Christians, allowance has still to be made for occa-
sional lapsing into transgression through ignorance,
sin, or due to one's weaknesses or failings. Such sin,
however, does not reign, as it does in the unre-
generate. It is not unto death, and can plead the
Advocate with the Father. The Christian perfect-
tion taught in the NT is the filling of righteousness
but blamelessness and loyalty, the staying of the heart
in the obedience and love of God through faith,
however the feet may be betrayed by the heedless
ness of sin into hidden snare.
It is (a) relative to our createdly and earthly limits;
(b) derived from God’s grace in Christ, not based
on any merits of our own; or, (c) incapable of indefinite improvement; (d) attainable or
attainable, not guaranteed to perpetuity, but (e)
conditional on faith, our striving against sin, and
steadfast abiding in the love of God. It will also
be characterized by humility, contrition, and self-
disarmament. Such earthly or relative perfec-
tion, which consists in faith, is necessarily different
from that full and final perfecting which crowns
our faith, and which awaits the consummation of
Christ’s atoning work (Ro 6, 5; 2 Co 3, 18, Ph 1, 9).

We may now attempt to gather into a few
propositions the teaching of the NT on this subject,
without losing sight of the warning reminder of
Lord Morley, that holiness is the "deepest of all
the words that defy definition" (Voltaire, London,
1878, p. 175).—(1) Holiness is the sovereignly moral
or self-regarding sinlessness, an ascetic
costume of our own. Or, as John, as the end of the
element in it, which, to secure the ends of right-
eousness, evokes a reaction of wrath or self-defence
against sin, would impair its purity and intensify
it. (2) It is the holy that makes the doctrine, makes
it racial, eternal, sure, changeless, and invincible
(P. T. Forsyth, The Principle of Authority, London,
1912, p. 211).—(2) Christian holiness results from the
imparting to man of God’s own holiness, as it
is mediated through Christ in a new creation. (3)
In one aspect, it is the fruit of sanctifying grace
in us, the effect of the Holy Spirit working in our
faith, to separate us from sin, perfect us in good-
ness, and enable us to do the will of God. In another
aspect, it is the result of our own moral
effort and aspiration of faith—an effort engaging
the entire personality, body and soul, in the
life of righteousness and love. (6) Such holiness
implies the existence of the Christian community,
as the necessary soil and atmosphere in which it
lives, and (6) it is a continuous and progressive
spiritual discipline. (7) Finally, while the NT
distinguishes holiness as something larger than moral-
ity, it yet knows of no divorce between righteousness and virtue. 'Holiness is virtue rooted in the religious
relation.... The distinction between holiness and virtue is qualitative, not quantitative' (W. R. Inge,

II. HISTORICAL DEVELOPMENT. The materials
presented in the NT were very variously utilized
in the history of the Church. Now one aspect,
and now another, of the full-orbed Christian
discipline was singled out and emphasized, and the conception of holiness changed with every changing
view of the nature of the will, of the sin of the
abandoned, and of the goal of ideal perfection to be attained.

1. Gnosticism introduced into the Christianity
of the early Church a crude Oriental dualism and a
fantastic Greek systematization, which tended to
substitute a metaphysical or semi-physical
cosmology of redemption, with an allegorizing
of history, for the NT gospel of the Incarnation.
2. Evil was identified with the master evil;
consisted in the exaltation of the soul from unhalled
immersion in the material world of sense
to its true spiritual home in the Divine spheres,
by means of ascetic purifications, mystical rites,
and the illumination of a special gnosis granted to
the pneumatic or truly spiritual Christian, and
superior to the hyletic. The world, the flesh, and
the devil were identified as the agent of evil. This
resulted in a kind of ascetic holiness, more theosophic
and speculative than ethical and spiritual.
2. On the other hand, Montanism, or pro-
plastic holiness, was a protest against the rapid
"secularization" of the Church as it spread through
the Roman Empire in the 2nd century. It sought,
by a more ascetic discipline and the cultivation of
the spirit of ascetic 'prophecy' among the laity, to
distinguish the congregation of the 'holy' not only
from the world outside the Church, but also from
the worldly elements within it, in view of the ex-
pected advent of the Lord in Parthi. Montanism
went beyond the NT conception of holiness in
affirming a new dispensation of the Spirit. 'The
Paraclete has revealed greater things through
Montanus than Christ has revealed through the
Gospel' (pseudo-Tertullian, 50). Yet it was a serious
attempt to realize the ideal of the 'holy Church'
by insisting that a pristine purity of communion
must necessarily accompany established purity of
document. Montanism was the first of many efforts
made within Christianity to restrict the members-
ship of the Church to those actually holy, which
crually elected. Negatively, it forced the Church

1 'No holy person is not good, but not every good person is holy. The distinguishing feature of holiness would seem to reside in something which has been good, but at any rate in addition to it,...... There is a touch of excess in holiness. It is not a matter of rule and policy...... of more or less of nothing and all, Holiness needs focus' (C. G. Montefiore, Truth in Religion, London, 1892, p. 28).
2 The harmony of will, a perfect self-dedication, death to self
3 Migne, P. L. 91.
gradually to take up the position, especially after the Novatian and Donatist controversies of the 3rd and 4th centuries, that its holiness consists not necessarily in the moral purity of all its members, but in the official and inalienable connection of its orders with the Holy Spirit, the true doctrine it teaches, the eminent saints it can produce—i.e., in the possession of grace and holiness in the deposit of faith and in the sacraments. 'The Church ... was legitimised by the possession of the apostolic tradition instead of by the realising of that tradition in heart and life' (A. Harnack, History of Dogma, Eng. tr., London, 1894–99, ii. 83).

This realisation was thus openly given to higher and lower planes of sanctity within the Church, led, first of all, to a duality of practice, still under ordinary social conditions, reflected in a theory of the 'Two Lives' by C. Bign, Divided a negative aspect of the Church of Alexandria, Oxford, 1886, p. 83 ff.; E. Hatch, Influence of Greek Ideas, London, 1890, p. 164 ff., and finally to Monasticism as a fresh type of ascetic holiness. By its monasticism may be regarded as a continuation of the aims of Montanism or Puritanism, without its anti-sociological elements, and welcomed by the Church. Desiring of making the majority even of its own members holy, the Church sought to counteract the prevailing laxity by approving, side by side with ordinary Christianity, and in loose attachment even to the sacraments, the pursuit of holiness by particularly religious persons, released from ordinary social obligations. Thus, whereas Jesus asked 'His followers be perfect,' and the NT 

'Quare mundum est, utrumque debeat homo sine pecato esse. Pecul. dubio dabit. Si debes, potes; si non debes, argo nec debes; si et non debes homo esse sine pecato, debes argo sine pecato; si jam pecatum non sis, tali deseris conscius.'

"... Asceticism was therefore regarded as an ideal 'Gnostic' as one who took his place in the daily round, 'acting the drama of life which God has given him to play' (Strom. vii. 11), monasticism confined the religious to a professional class, who should make the cultivation of holiness a distinct calling by fleeing from the world. Based thus on a religious egoism and an essentially dualistic view of the world, both of them alien to Christ's spirit, monasticism cultivated a unique sanctity, not to inner renunciation or detachment from the world, with an exemplary practice of the ordinary Christian virtues, but to an external abnegation of all property and marriage, and to the practice of artificially selected virtues such as poverty, chastity, and contemplative silence in monasticism, too, the holy man tended to identify himself with the sufferings and death of Christ rather than with the quickening Spirit. Holiness was to be attained and peace won by refinements of mortification, a severe penitence, and the rigours of self-disciplinary effort, rather than by the free gift of God's sanctifying Spirit operating on the soul through faith.

1The Ascetic theory has always rested in the context between the human and the Divine; too often forgetting that the Divine Spirit is not merely the upriser and witness, but the Almighty Agent also in the destruction of sin (W. B. Pope, Compendium of Christian Theology, London, 1889, ii. 36).

There was, no doubt, gain as well as loss in the ideal of monasticism. It kept the light of religion burning in dark ages, and rebuked all dilute forms of holiness by the example of a herculean and thoroughgoing renunciation. But its defect was that it made little or no provision for the ordinary man to become a Christian—i.e., the average man, and left to itself the world which it should have leavened. The degree of individualism marking monasticism varied in different countries and at different epochs; often becoming, especially in the

West, social and co-operative within the narrow circle of the monastery, as well as devoted to works of general utility. But still its holiness remained at heart a 'straightforward asceticism,' in marked contrast to the ideals of the NT.

4. A new conception emerged in Pelagianism, which may perhaps be described as a kind of natural holism, Christianity with a clear and consistent revelation, man is capable of perfect conformity to the will of God, which prescribes nothing impossible. In so far as man is not capable of conforming to the Divine ideal, he cannot be charged with sin for failing to do so. This is no sin prior to the actual choice of evil by the free will.

'Quare mundum est, utrumque debeat homo sine pecato esse. Pecul. dubio dabit. Si debes, potes; si non debes, argo nec debes; si et non debes homo esse sine pecato, debes argo sine pecato; si jam pecatum non sis, tali deseris conscius.'

The essentially rationalistic system of belief in the inherent capacity of man to achieve all the righteousness required of him appears in history in various forms as Montanism and modern Naturalism. But it belittles the Divine demand, lays stress on sympathetic goodness rather than on the holiness that is mediated through faith, rejects both atonement and grace, and conflicts with the normal Christian consciousness of sin and grace.

5. This truth was brought out by Augustine, who made the keystone of his entire system the utter dependence of the believer, for the beginning, middle, and end of Christian holiness, on the free, indispensable, supernatural, prevenient, and irresistible grace of God. It is of Christian holiness received prominence in Augustine: (a) its personal, emotional aspect, as a clearing to the Lord God, the living individual relationship of faith, humility, and love, which appropriates the Divine Spirit and leads at last to life's blissful goal of perfect knowledge, vision, righteousness, fruition, and eternal rest; and (b) its social aspect, as a grace mediated to us only by means of and within the Christian Church, which is the cœnas dei, the Kingdom of God on earth, and the sole sphere of sanctification. Augustinianism has attached equal importance to the inward experience of grace and to its outward ecclesiastical attestation; but the essential faculty of the infused love of God, as conditioning our holiness, rather than on the soul's new religious standing through forgiveness and regenerate faith, gave a direction to the Church's doctrine on this subject which was not to receive a corrective until the Reformation.

6. From Augustine sprang the medieval conception of 'sacramental holiness,' which was developed in systematic detail by the scholastics, and reached its final form in the Catholicism of the Council of Trent. The characteristic features of this type are the objective provision for man's holiness in the supernatural grace of the sacraments, and the place assigned to merit in the process of sanctification. The principle of holiness and righteousness is Jesus Christ. We become members of His body, and share in the fruits of His Incarnation and Passion; when we receive Christ's graces of His Holy Spirit. This present grace is a supernatural power or quality infused into the soul by means of the Divinely appointed sacraments or through prayer. It imparts an impulse towards righteousness and God, obliter-
HOLINESS (New Testament and Christian)

...sary condition of beholding and being united to God, through purgation, illumination, the remuneration of all creatures, and the elevation of the soul above the distractions of the world of time and sense. In its extreme forms, mysticism tends to dispense with everything external and intermediary, and to wander into vague regions that are non-Christian and pantheistic, and even pantheistic, thus making a fatal sacrifice of the Divine holiness. Christian mysticism frequently tends to depart from NT holiness by seeking to approach God otherwise than through the Incarnate Word, the means of grace, and the sole relationship of faith, as well as in the whole manner of laying emphasis on finitude rather than sinfulness, immanence rather than transcendence, communion rather than forgiveness, feeling and imagination rather than will and conscience, the bliss of personal absorption in the life of God rather than a life of filial obedience to His will. Yet mysticism has ever served piety by insisting on inward experience and spiritual passion in religion; and in a St. Bernard it exhibited intense personal love of the suffering and lowly Jesus, the Bridegroom of the soul, as an all-important element in our Christian holiness.

8. In the Mendicant Orders we find a still further reaction against the clerical ideal of sanctity, in the emphasis laid upon holy poverty. St. Francis and the friars had broken the bonds of the church from monasteries, churches, and the technicalities of hierarchical religion to the homes and haunts of ordinary men and the service of one's neighbour, by the preaching of penitence, charity, love, and a joyous imitation of the poverty of Jesus.¹

9. The chief corrective, however, to the sacramental conception of holiness was to come not from mysticism within the medieval Church, but from Protestantism outside it. The Reformers contended for a fiduciary holiness, based on the religious experiences of faith beyond what is strictly required of them ("bonum supersoncendae") [Summae, ii. i. qu. 108, art. 23] as to accumulate a treasury of merit or works of supererogation, which are available for less mature Christians in the form of indulgences (p.v.), by a kind of transferred holiness, yet always on the basis of the mystic union of believers in the One Head.² The absence of any assurance of salvation in this system constrains the believer to supplement his faith by making diligent use of the Church's means of grace by praying himself eagerly to full satisfaction of acts of virtue, in order to acquire, by many repeated efforts after obedience, that holiness which is necessary for future blessedness (see J. H. Newman, Parochial and Plain Sermons, London, 1844, l. i-16).

7. Side by side with this sacramental type of holiness, and partly in protest against its spirit, there was fostered within the Church the pietistic, or immediate subjective holiness. Mysticism has assumed many forms in the history of the Church, but its characteristic ethical feature is the desire for inward purity as a necessity. Nov 2.

¹ For the Friends of God, Waldenses, and other holiness sects of the Middle Ages, see separate articles.

² Augustin and Catholicism attached great weight to sin, but behind sin stood concupiscence, virtually a physical conception; and behind righteousness the hyper-spiritualisation of holiness, etc. Hence Catholicism culminates in ascetic morality and mysticism. For Luther there stood behind the ethical sense sin in the religious sense, i.e. unbelief, and behind the being righteous the fundamental religious virtue, i.e. faith. Luther insisted that which Augustine, owing to his Neo-Platonism, was not fortunate enough to reach, notwithstanding numerous approaches to it; he made Christianity again a religion (P. L. Loth, Lettres à Calvet, viii, 1506, p. 797).
HOLINESS (New Testament and Christian)

to the Christian than that of faith, which is simply the continual daily appropriation, not of forgiveness, but of God. Himself, in the source, the believer's peace, power, righteousness, and good works. In the teaching of Luther, Christ Himself assumed the central place which in Scholasticism was occupied by infused grace; and the holiness of monasticism, with its ecstatic morality and withdrawal from the world, was rejected to make way for a holiness of faith which could nowhere be better exemplified than in one's ordinary calling as ordained by God.

The teaching of Calvin on this subject was governed by his doctrine of Divine predestination, electing grace, and the sovereign will of God. His aim was to cultivate an intensive holiness which should consist not simply, as Luther so breadthly taught, in that we loved the Divine service of all men which results from the joyful experience of the Divine forgiveness, but rather in reverent obedience to God's commandments and the observance of a spiritual walk or relationship as prescribed by the law of God (Inst. i. ii. 3). True holiness is possible only to such as are elect by the decree of God (Tit. xii. 3), and it follows by a Divine inner necessity of personal right and justice, yet only in the sphere of the Christian Church, because of its possession of the Word and sacraments (Iv. L 4, 16).

Not that all the members of the Church are equally holy,

only that with their whole heart they aspire after holiness and where they be better exemplified than in one's ordinary calling as ordained by God.

Thus the importance attached by Calvin to a strict ecclesiastical discipline as a means to holiness (IV. xlix.).

According to Luther the primary purpose of the Church was to proclaim the Gospel of God's forgiving love in Christ; according to Calvin it was to train the elect in holiness. . . .

The notion of the Church as a community of holy people, pure both in doctrine and conduct, because wholly governed by the Holy Spirit, was a doctrine that increased with the times it so much in accordance with the reformation teaching of God's presence agency for the proclamation of God's forgiving love (V. c. McEuen, in Europe's Modern Theology and Related Subjects, New York, 191, p. 211.)

These characteristics profoundly influenced modern Europe and gave birth to the authors' harsh denunciation of Calvinistic Presbyterians and English Puritans, with their occasional excesses of harsh casuistry, Sabbatarian gloom, and iconoclastic zeal, but it was the wise of spiritual grandeur and imaginative power. These types aimed at recovering the full ethical content of holiness, as well as the due emphasis on the holiness of God, and, by a new asceticism, they were all the more mighty in outwardly dominating the world because they had inwardly and spiritually renounced it (see E. Trouche, Protestantism and Progress, Eng., 76-80, 130-141).

The ferment caused by the Reformation gave rise to several attempts, mostly non-ecclesiastical, to establish more experimental holiness, the various forms of which may be studied in the Anabaptists, Seekers, Quakers, and other sects, in Pascal and the Port-Royalists, and in Molinos, Fénelon, Madame Guyon, and the Quietists. In Germany in the 18th cent. the movement took the form of Pietism, a reaction against the stiff scholastic dogmatism of the Lutheran Church and current rationalism. Spener, Francke, and Gottfried Arnold were the leaders of a school which sought to transfer the emphasis in religion from belief in an orthodox creed, and reliance upon institutions and means of grace, to the cultivation of spiritual and personal apprehension of saving truth and the exemplification of it in holy conduct. The experiences of conversion and regeneration was centered on as an indispensable prelimin for the knowledge of God or the fruitful study of theology. 'Awakened' Christians were encouraged to meet together for free prayer, and an attitude of aloofness or antagonism was taken up towards worldly amusements and secular culture. The movement gave rise to both philanthropic and fanatical developments, and in passing over into Moravianism it revealed strong separatist as well as missionary tendencies.

Theor and subsequent experiences, rather than any abstract theorizing on the subject, led Wesley to become the life-long champion of doctrines which were afterwards embodied in the So-called Christian Perfection, as believed and taught by the Rev. Mr. John Wesley, from the year 1728 to the year 1771 (Worke, London, 1909, p. 214.) John Wesley believed and preached that the Divine Spirit was as mighty in administering redemption as the Divine Son in accomplishing it (A New History of Methodism, ed. W. J. Townsend, etc., London, 1909, i. 214.). In opposition to the Catholic doctrine of meritorious perfection, the mystical conception of perfection through isolated communion with and absorption in deity, and the general view of perfection as something to be attained only in a future life, Wesley maintained the doctrine of a present evangelical or Christian perfection in the entire sanctification of perfect love. Such perfection is not to be confused with absolute or angelic or Adamic righteousness, and is consistent with a thousand days' absence from earth, with sin, with infirmity, and creaturely limitations, being relative to the helps and opportunities of every moment. . . .

It is the perfection of which man is capable while dwelling in a corruptible body; it is loving the Lord his God with all his heart and with all his soul and with all his mind. 'The sin from which it is free is 'the voluntary transgression of any known law,' and it implies constant self-renunciation and even fasting, the careful observance of Divine ordinances, a humble, steadfast reliance on God's forgiving grace in the present, a firm intention to regard God's glory in all things, and an increasing exercise of the love which itself fulfills the whole law and is the end of the commandments. . . .

The perfection which I have taught these forty years cannot be a deception, unless it were a deception to take it as pertaining to God with all our heart, and our neighbour as ourselves. I pin down all its opposers to this definition of it. No evasion. No shifting the question! Where is the deception of this? (Journal, 17th Aug. 1768.)

This doctrine of full sanctification was the grand depositum which God has lodged with the people called Methodists; and for the sake of propagating

Wesley's doctrine of perfection may be studied further in the Journal, 24th July 1728, 19th April 1731, 27th Aug. 1756, 28th June 1759; Sermons, no. xii., ivr., ecr.; and the Letters dated 5th Apr. 1736, 7th May 1738, 17th June 1756, 28th June 1759, 19th Oct. 1771. For Believers Seeking Full Redemption.
and other similar associations for the deepening of the spiritual life.

Modern Holiness Movements have advocated the privilege and possibility of our attaining, here and now, to the peace, power, and beauty of full sanctification, through the surrender in faith.

Eckhardt sees before men 'a life of faith and victory, of peace and rest as the rightful heritage of the child of God, into which he may step not by the laborious ascent of some "Scala Sancta," not by long prayers and laborious effort, but by a deliberate and decisive act of faith' (Harford, op. cit. 81). 'In the blood and death of Jesus there is to be had not only forgiveness but also a direct and immediate breaking of the power of sin, cleansing from sin, and continual victory over sin, in the surrender of faith' (Th. Jellinghaus, Das Volksgepyndheits-Eid durch Christum, Basel, 1903, pp. 89, 440).

In more popular statement, a 'higher life' or 'second blessing' of 'full salvation' may be experienced through a single act of perfect consecration to God, who in response completely neutralizes or eradicates the sinful nature so as to grant a present deliverance from the power of sin, on the sole condition of 'abiding' in an attitude of dependent life-union with the Holy Spirit to the degree to which this last condition, which involves exercise of the personal will of the believer, is explicitly dealt with accounts for the different types of Holiness teaching. How far some forms of it can go may be judged by the affirmation of pastor Paul, 'I have for a long time now seen nothing of my old nature in my life' (Report, 1904, p. 298). Such a claim to perfect holiness, however, is to be interpreted in a religious rather than in a moral sense, for the Christian in the daily walk (a) as to maintained communion with God; and (b) as to victory over all known sin' (C. F. Harford, The Keswick Convention, London, 1907, p. 26). In the same year a larger conference, under the leadership of Smith and Boardman, met at Oxford 'for the promotion of Scriptural holiness'; and in 1875, by invitation of Countess Reuthe, the 'Convention for the Promotion of Practical Holiness' was held at Keswick. Among the chief leaders of the convention have been included Theodore Monod, Andrew Murray, A. T. Pierson, F. B. Meyer, and H. C. G. Moule. 'The Keswick Convention has set up no new school of theology, it has instituted no new sect, it has not even formed a society, but exists for the sole purpose of helping men to be holy' (Harford, op. cit. 4).

In 1875, Smith was in Berlin and inaugurated what came to be known as the modern German Evangelizationsevangelismus. His work was earnestly taken up by Schürmann, Chrstophe, Paul, and others, and the Deutsche Evangelisierungsverband (1884), the Gnadener Pfingsten-konferenzen (1888), the Blankenburger Alliantie-konferenzen (1902), and similar associations. In some cases these broke away from the Established Church, but for the most part their aim was to cultivate a deeper holiness by means of special organizations in touch with it. The best theological exponents of this school were Jellinghaus and Lepsius, whose views, however, have been regarded as unduly moderate by the more advanced sections. This Swiss Emigrateur is its chief representative. In America, apart from more special organizations like A. B. Simpson's 'Christian Alliance', the Northfield Convention, established in 1859 in Massachusetts, has proved most influential. Out of it has sprung the Student Christian Movement.

Boardman's Higher Christian Life, written before 1880, ran through many editions on both sides of the Atlantic, and quietly prepared many minds for the movement when it began to take mass form in 1870 in Union Holiness Conventions under his leadership. It is still perhaps the most valuable introduction to the study of the modern Holiness Movement. See his Life (London, 1880).
HOLINESS (Roman)—A definition of 'holiness' in relation to the Roman Church, its moral, and its ecclesiastical aspect, is not easy to frame. Perhaps 'purity under divine sanction' may be taken as a rough explanation for the present purpose. In the earliest religion of the Roman State, the pagan cults, which were moral and exacting, and their relation to conduct is obscure, but the idea that character was in some way dependent on a power unseen and superhuman was not entirely wanting. The conception that moral perfection is pleasing to heaven is embodied in some of the oldest forms of cult—that, for instance, the Vestal Virgins served. On not a few critical occasions the anger of the gods, bursting upon the community, was traced to their displeasure against an erring Vestal. As time went on, moral abstractions, treated as divinities, were publicly revered—chastity, for instance (Pudicitia); and these forms go back to an age when in religious matters Rome had as yet been very deeply affected by Greek influence. Reversal for such abstract powers was always more characteristic of Italy and the West than of Greece, and the East. We must ask, if possible, answer the difficult question. What effect upon the individual life had the belief that morality is under the protection of Heaven? If we regard only the utterances of the Greek orators who painted the manners of a small clique in the capital as though they were representative of the whole world, or the equally indiscriminate denunciations of Paganism by early Christian writers, we may be tempted to answer 'None.' But a great amount of evidence exists which tells a different tale.

Thus, the vast mass of private memorials unearthed in the Western world by excavation bears testimony to a family life far different from that which is almost exclusively presented in the literature of the Empire. The fact that Vesta was the presiding deity of the family circle, as well as of the State conceived as a larger family, is a sign of a general belief that the ultimate division of morality is found in a supernal world, and that moral cleanliness among those of this world is a concept which issues from the other. This idea, finds general expression in language, particularly in the use of the words castus, purus, sanctus, pius. Of course, these terms sometimes have a hard and somewhat lowly significance. They may be employed in a limited sense, not in reference to character taken as a whole, but to abstinence from some particular class of immoral acts. It is not easy to trace the moral life of a people or an empire. But it is not too bold to say that the history of these words in the Latin language shows a steady elevation of the ideal of morality.

The conviction that, in spite of the many horrible misrepresentations which a long line of pagan poets and philosophers denounced, the gods favoured personal purity is exhibited in much Roman ritual besides that connected with Vesta. Priests and priestesses were often subject to severe restrictions. Boys and girls, being innocent, were employed in personal service, we read of Sacerdotum Sexuorum Secularium of Horace. This famous hymn may be said to have done homage to the efforts of Augustus, who strove to cure the sickness of the world by the union of moral and religious reform. His policy made an epoch in the social history of the Western Empire. The great Greek tide which had swept the educated classes into asceticism began to turn, and a belief in the divine govern-
ment of the world was renewed and penetrated society. An increased yearning after moral purity manifested itself in many ways. New forms of religion and new applications of philo

sophy then, a tendency after, religion and philosophy were not always on the side of morality. There were Stoic and Cynic antonimiae as there have been Christian. And the new divinities Isis and Mithra, and others, who were so ardently accepted, could degrade their worshippers. But, on the whole, these new cults were popular, at least in part, because they satisfied to some extent the desire to find a way of escape from the corruption of unregenerate human nature—a way not opened by the older civic faiths. The seeds of Christianity could hardly have thriven as they did in the field of the Roman world if it had been still, morally, the world of the ancient Cato.

Not unnatural then can purity as a cult more prevalent among women than among men. On the principle of 'corruptio optimi posses,' satirists specially loved to depict the vices of women. But an attentive reader, say, of Mayor's notes on Juvenal, will see something of the other side of the shield. And a perusal of the very numerous grave-stones of women will leave an impression that there was, even at the worst time of the Empire, a wide range of sound family life, resting on the purity of the matron and mother. The connotations of the untainted lives of mothers of households are, in a multitude of cases, far from being hypocritical or merely conventional. The best preserved letters of Cicero, for instance, on his wife Turia, in the Augustan age, express her for chastity and religiousness without superstition. It was just this hope of cleanliness, combined with worship cleansed from superstition, that drew women, and in a less degree men, not only to Christianity, but to the cosmopolitan pagan divinities. A common type of inscription praises a wife for her sanctity and modesty. In spite of loose views of the marriage tie, we hear much of marriages which endured through long lifetimes, and the title vitae, 'wife of one husband,' was prized. This turning away from the superstitious exaggerations of the ancient cults, combined with a recoil from impurity, is well seen in that strange apology for Christianity rather than for Christianity of the Octavius of Minucius Felix, written in the latter half of the 2nd cent. A.D.

Until the rise of the Neo-Platonic philosophy, which was a great force until the last imperial centuries, the tendency of the later philosophers, both in the East and in the West, was to eschew theory and enforce morality. This was characteristic of all the schools alike, by whatever name they were called. It is impossible to mistake the trend in educated circles in the West during the first three centuries of the Empire towards an elevation of morality, whose moving force was a higher view of the relation of the individual to God. There is an ever strengthening vein of puritanism in the later philosophy, which reached its fullest development in the Neo-Platonic scheme. This vein is especially traceable in Stoicism. The dry logic of earlier Stoicism was softened, so that the moral lessons of the school might reach a large circle of Roman disciples. Every attempt was made to bridge over the gulf between the philosopher and the vulgar. The philosophers themselves, who wandered about the world preaching to the multitude, though accused, like other teachers, of criminality, found a hearing from the crowd just because of their success after a better life. There was a gradual approximation to the Christian idea of sin, and the necessity was realized of a divine deliverance from the burden of the flesh, with its impulses to immorality. Virtue was explained as attainable only by the will of God, and by imitation of the divine; duty, as the outcome of the divine law. 'No man is good without God,' said Seneca. The philosophers were more and more presented as the carrier of sick souls. The wide difference between doctrine and practice among the followers of this teaching was the theme of satirists, but there is no doubt whether they were more open to this kind of reproach than the adherents of other religious and moral systems in the past and in the present.

HOLINESS (Semitic).—The conception of holiness when traced to its historic origins among Semitic peoples is stripped of all the ethical qualities with which our Christian modern consciousness has invested it. The ethical elements which have become absorbed into its content entered a much later stage in the evolution of ideas which became attached to the term. This change of connotation will be duly noted in its proper place.

I. HOLINESS AT THE EARLIER STAGE.—1. The original meaning of the Semitic word for 'holy,' 'holiness,' ʿe- ʿe- ʿe- ʿe ('purity,' and of the corresponding adjective ṣadda, in the sense of 'pure,' 'bright') to which the syllables are equivalent, especially when the Arabic ʿadda and its derivatives might seem to lend some support to this view. But it would be a mistake to build up the infrequent use in Assyrian of derived forms, and in Arabic of what may be a derived meaning. Our only safe course is to generalize from the use of ʿ- ʿ- ʿ- ʿ both as a verb and as substantive in the earliest documentary sources, and of other words, such as ʿ- ʿ- ʿ- ʿ, found in all the Semitic languages possessing a similar meaning. We are thereby led to the conclusion that the term ṣ- ʿ- ʿ expresses the separation or reservation of a thing or a person for Divine use or a Divine cult, and the state of an object or person so reserved and brought into close relation with Deity as inaccessible or hardly accessible, and invested with a quasi-Divine character and power.

We are here touching upon the common ground of primitive custom where Semitic and non-Semitic traditions blend. The saying, 'the holy thing is in the hand of the holy,' is familiar to us. It is a saying which is met with approval by E. Renan (Hist. d'Israël, Paris, 1887-94, i, 29), 'Primus in orbe deos fecit timor,' here finds its application. The element of fear, which invests the relations of primitive man (see the 'General' art. above) with the occult personal or quasi-personal agencies with which he appeared to be surrounded, is expressed in the Heb. phrase for religion, ʿāḇā ʿāḇā. This feeling of awe was extended to all objects which stood in more immediate contact with the gods whom the Semite worshiped. 1

Roberston Smith is dominated by his conception of sacrifice as expressing communion between God and the worshipper. Therefore, when he says (ibid., sect. 72) 'It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are held to their worshipers by strong bonds of kinship, that religion in the only true sense of the word begins,' he is expressing only a partial truth. E. Cursiter, who traveled among the inhabitants of the Lebanon and Palestine, is probably right in asserting that the worship of the modern primitive Semite is simply the process of the development of the answer of his Arab guide Bandan to the question what made the Arab religions almost as well be given by the primitive
HOLINESS (Semitic)

Analogies to the primitive conceptions of holy things may be found in Hebrew religion. The mountain Sinai, Jacob's abode, was holy and could not be touched without peril to life (Ex 19:12, 15-25). Similarly Uzzah's temerity in touching the ark of God (2 Sam. 6:6) led to his death. It is an instructive example of the survival of such magical conceptions regarding holy objects in the ceremony of trial by ordeal of a woman suspected of adultery (Nu 5:9-19).

The passage is difficult because it shows, if Baedeker's analysis is correct, that the text has been worked over at different times. The priest shall take holy water in an earthen vessel and of the dust which is on the floor of the tabernacle shall the priest take and put into the water. After further ritual, unloosening the woman's hair, the officiating priest takes in his hand the 'bath of water' that brings a curse and makes the woman swear a solemn oath (v. 21-25). After reciting the words at its close, 'And this water that brings a curse shall enter thy belly and cause thy womb to swell and thy thigh to fall,' to which the woman answers, 'So be it, I have sinned, I have done a cursed thing.' The curse is written in a book and immediately dissolves the writing completely in the bath of curse-bringing water, and, after waving a meal offering before Jehovah and burning it, he causes the suspected woman to drink the 'holy' bathful of water.

Robertson Smith holds that the water is here called 'holy' because it is derived from some sacred spring. Em-Mishtat at Kadesh, as well as Em-Meribah, he would explain as sacred springs whose waters were used in decisions based on the ordeals of this kind. On the other hand, Baudisius, with at least equal probability, explains the 'holiness' of the water as due to the fact that it was kept in a vessel belonging to the sanctuary (Ex 29:38). The people have cited instructive as showing that kodesh includes a positive as well as a negative element, viz., the positive element of Divine power which may break forth with destructive effect. Baudisius's statement, that 'holy' does not properly designate a quality but a person, is, in a merely adequate (Studien zur sem. Religiongesch. ii. 45). Moreover, this writer's view, that the materialization of holiness in Ezekiel is late (60. 141), is certainly correct.

Further illustrative examples will make this clearer. In Is 60 we have primitive conceptions of holiness. In the presence of a person as a mysterious potency which can pass from one individual to another with whom he comes in contact. The latter is therefore warned: 'Stand apart, for I make thee holy.' This expression occurs in a passage crowded with obscure references to the cult of Palestine into which the resident Hebrew population in the middle of the 5th cent. had become. Every misfortune comes from God. Nothing comes except from Him. We fear God and the Veil. We take our vows in order to guard against injury. God receives our vow like a personal matter. When one says, 'I will not do it,' the misfortune may overtake us (Drew, Kol. im Volk der Slam, Leipzig, 1908, pp. 356, 64 f.).

1 Some doubt exists as to the validity of the reading of our text דָּבֶר יָדוֹ, for the LXX have ὑπολαμάσαι Ἰωάννην. This has induced Dillmann, Nowack, and others to substitute for the somewhat unusual דָּבֶר the words דָּבֶר יָדוֹ or דָּבֶר מַאֲסֵ יָדוֹ. On the other hand, Robertson Smith (Rel. Sem. 2. 131) contends for the validity of the reading 'holy water' as an 'isolated survival of an obsolete expression in post-Exilic Judaism derived from the old language of Hebrew ritual. In this case 'pure water' and 'living water' would be the later interpretative glosses which have to be substituted in the text so employed by the Greek translator.

2 See 0CC. 'Numbers,' ad. On unloosening the hair, Wahlenbach, 1907.

3 Gray (JCC. 'Numbers,' ad. ) cites the custom practiced in Egypt of writing passages from the Qur'an on the inner surface of a bowl and using the water that had dissolved the writing for medicinal purposes.

4 Here reading, of course, the Piel instead of the impossible Qal of the Heb. text; so Dillmann and other recent scholars. Another interpretation that has above been suggested to the present writer by Hadding, viz., that the initiated person is anxious not to lose his sacred potency by contact with contamination. See also in N Nas. 21. (Sahih) all aware (eswiaim) that a potency (Dowma) had passed out of Him when touched by the diseased woman.

5 One who had passed through a ceremony of consecration warns another to keep at a distance, because contact with his holiness might infect that other with holiness, and thereby surround him with a circle of tabus or restrictions which would divide him from the ordinary duties of life. This becomes evident from a comparison with Ez 44:2. There special instructions are given to the Zadokite priesthood that, when they pass from the inner to the outer court of the sanctuary, they are to put off their official vestments wherewith they have ministered before Jehovah in the inner court (cf. v. 22) and place them in special holy chambers, lest by contact the people whom they meet be made holy. Other ordinary garments must be substituted by the priest in an outer court in order to prevent this contamination of holiness. The same principle of contagious holiness applies to the utensils employed in sacred rites. Since special holiness was ascribed to the sin-offering, it could be eaten only in a holy place, i.e. the court of the tent of meeting (Lv 6:19). Contact with the flesh of this most holy sacrifice creates holiness, and every garment on which the blood is sprinkled must be washed in a holy place. In other words, a circle of tabus of a stringent character is set up. Hence the earthenware vessel which brings a curse is broken, as is the vessel which is boiled must be broken, and, if the vessel be bronze, it must be carefully scoured and rinsed. Holiness is treated in every respect as something material (v. 25) also occurs in Lv 11:23-25, 12:13. These last passages deal with cases in which something unclean has come into contact with an earthenware vessel, or mouse, or other unclean animal (Lv 11:27) fall into an earthenware vessel, or if that vessel be touched by a person who is unclean by reason of a discharge, it shall be broken. Here we see that there is a close analogy between uncleanness and holiness. The effect on the vessel is the same; it has to be broken whether it has contained sacrificial flesh or that of an unclean animal. This close point of contact has been investigated by writers on Semitic religion, e.g. Robertson Smith and Lagrange. The common factor in both impure and holy objects is that a certain element of danger, owing to the action of a superhuman agency, invades the object in both cases (Rel. Sem. 1. 155, 447-445) and serves to debar it from human use and contact. For contact in both cases involves contamination, and in certain cases uncleanness. Thus in Heb. 3:14 the familiar root meaning 'approach' is used in Arabic in the sense 'to be impure.' At the same time, the distinction between holy and unclean is a real one, though both are blended in various forms of tabu in savage custom (see the 'General' art.).

PrIMITIVE LIFE deals with concrete conceptions. Thus in primitive Semitic religion, holiness might be regarded as the nimbus or outflow of Deity which attached itself to everything that mediates in worship, whether persons or things, between the god and his worshipper. So closely is holiness attached to the Divine personality that Jehovah swears by it (Am 4:9) just as He does by His life (Nu 14:10, Dt 33:26, Jer 40:14; cf. Is 1:14, 58:6, 2:29, etc.), or just as the Divine name is associated with Himself and men aware of it by Lv 19:18, 1 S 20:9, Zec 5:8; cf. Jer 44:19, etc.) Thus we find 'holy gods' in the inscription of Eshmunazar (line 9).

The ideas of withdrawal, restriction, and reservation expressed in Heb. by תְּדוּעָה, תְּדוּעַי (cf. אֱלֹהָמִי), applied to objects connected with worship, are in Arabic exhibited by other terms. Chief among these in Arabic.
word ḫaṣām, of which the root frequently appears in Canaanite Hebrew, Aramaic, and occasionally in Assyrian. In this case etymology enables us more easily than in that of ḫaṣām ḫaṣām (s) to arrive at an acceptable analogy. Originally the idea is of "to exclude," "debar," or "render inaccessible." What is sacred and also legally prohibited is called ḫaṣām, and any object or woman who may not be approached is designated as such. Thus ḫaṣām, a substantive, is specially used by a Muslim of the sacred enclosure of the Ka'ba at Mecca. With the Hebrew-Canaanite ḫāṣām, or ḫāšām, which was specially connected with war, we shall deal later. The noun-form ḫaṣām also meets us in Aramaic Nabatean inscriptions.1 In these, ḫarām means something like a "sacred" thing. Thus in an inscription on a tomb in el-Hejez the deity Dēharā (properly "owner of Sharrā"), Hantith, and Kalsoah are invoked to bring a curse on any one who shall desecrate the tomb in any way or alter the inscription, for the sepulchre and its inscription are an inviolable object (ẖaṣām). The same word is used to express the inviolable possession (ẖaṣām) of Dēharā, the god of our lord.2 Here ḫaṣām approximates the use of the same word in Arabic.

Another Arabic term of closely similar meaning is ḥam, designating something forbidden or reserved, or more properly, guarded or protected from intrusion.3 Thus we read of the ḥamād of Wajj attached to the sanctuary of Al-Lat at Taif, which was a holy place defined by the Polynesian tabu. "If a woodcutter intruded on the ḥamād of Wajj, . . . he forfeited his hatchet and his clothes; if a man unlawfully grazed his cattle on the ḥamād of Jarrash, the cattle were forfeit." (Rel. Sem. 149). We find also that dress which was employed in ordinary life is distinct from dress worn in sacred functions. Accordingly, those who were not members of the priestly race were excluded from the sacred enclosure, such as a mosque, was entered (cf. Ex 34, 5). Clothes were either washed (in case of poor worshippers) or changed (Gen 31, Ex 19). Even cattle which had strayed from outside into the ḥamād could not be reclaimed.

The opposed term to ḥaṣām in Heb. is ḥal, properly that which is free or set loose for ordinary human use, in other words, not subject to the restrictions involved in holiness. In Lev 10 the distinction is sharply drawn, and priests are enjoined to keep it "holy" as they would that between clean and unclean (cf. Ezek 22, 25, 40, 44). This stringency of distinction became specially emphasized in the days of the Exile (Isa 60, 11), and still more in the days of Ezra, when laxity of usage required stern correction combined with strict rule. Without this the result would not improbably have been the final extinction of Israel (Travers Herford, Pharisaiism, London, 1915, p. 10).

But this was only to accentuate a tradition that had its roots in the past. Theory and prescription, however, have to give way to practical necessities, and in the pre-Exilic period of Israel's life such cases must have frequently arisen for stray or stolen cattle that passed within some ḥamād, or sacred enclosure, was pretty strictly enforced in primitive usage, as the story told by Wallenstein (Seleuc., 63, text from the Canaanite tablet of Ibl al-Kalib respecting Saif, the priest of the deity al-Fal, who had stolen a milch-camel and detained it under the deity's protection, clearly shows. But this right was modified by the Hebrews. Justice could override a murderer, even though he took refuge in a sacred enclosure. Such asylum was only the case of accidental manslaughter (Ex 21, 18), and even in this case the asylum came to be limited to only a few selected spots (Deut 4, 41-42, 19-20, Jos 20, 4, Nu 35, 5). Probably, as Robertson Smith suggests, the community of interest which subsisted between the people and its deity tended to mitigate rules which might otherwise have pressed with excessive severity on his worshippers. Thus the money stored in the sacred precincts of the temple of Ba'al-belith was even employed by Abimelech to hire a company of desperates (1 Sam 12). In the textual passage 18 21-7 (see Driver and Budde, ad loc.), we read that in the lack of ordinary unconsecrated bread (17) the holy bread that stood on the table before the Divine presence (Yhwh in v. 4, 13, 355) in v. 7) was distributed among David's starving followers by the priest. The fact that the distinction between ḥaṣām and ḥal is preserved, and that the priest endeavours to exact conditions of purity, points to the conclusion that we have a departure from ancient and normal custom (cf. Mk 2).

The distinction between ḥaṣām and ḥal above indicated is obviously different from that between Divine property and human property, for it is the distinction between the sacred enclosure which there are severe restrictions, and objects which are free for ordinary human use. This idea of sacredness, involving restriction of use and danger accruing from its violation, was far more primitive than the conception and usage of property, though it may be admitted that the latter came afterwards to supervene.

It is not possible within the compass of this article to deal with all the ramifications into which the ancient conception of holiness extended among the Semites. It must also be noted that their various departments concisely under the following heads.

2. Holy things.—(a) Places which are invested with holiness are those in which the supernatural power and presence are supposed to be manifested. These elements of power and presence are often expressed in Semitic by the word name (see below under (b)). Hence a sanctuary was in Hebrew par excellence to be a spot (por excellencie Jerusalem) in which God had 'put his name' (Ex 20, Deut 12, 15). Such a place would be. In Canaanite, called ḥaṣām and be invested with the qualities of holiness and its restrictions. In the primitive life of the Arabian desert, from which it is generally held that the Semitic peoples emerged, the main physical characteristics associated with holy spots would be fertility, the spring arising from the soil and creating a verdant oasis of shining trees in the bare desert. These spots, or certain of their various 

1 Respecting ḥaṣām in Aramaic inscriptions, both as verb and as substantive, see Lidzbarski, Nord.-aegypt., Berlin, 1886, p. 191; Cooksey, North Semitic Inscriptions, Oxford, 1905, nos. 79 (lines 5-3, 53, 52, 34, 84, 34); cf. Lagrange, 151.

2 See A. A. Cook, North Semitic Inscriptions, Oxford, 1905, nos. 79 (lines 5-3, 53, 52, 34, 84, 34); cf. Lagrange, 151.

3 Lidd., Heb. ḫaṣām (root of ḫaṣām, 'wall'), meaning 'protected,' 'guarded,' Perhaps the fundamental meaning is 'to be hot with anger' (in defense of rights); cf. ḫal, ḫal (Lidd.).

4 Book ḫal, Aramean, i.e., the latter, being applied to the discharge (lit. the emptying of a vase), is the same which is regularly used of emergence from a state of taboo (the ḫaṣām . . . ) into ordinariness (Isa. 56, 29, 30).
sanctity as manifesting a Divine power and presence. Thus the sacred stone Eben-ezer was erected by Samuel at the place where Jehovah manifested His power in the battle of the Philistines. (I S 7:9.) In the spot where God appeared in a dream to Jacob, the stone marked the spot, and oil was poured upon it. (Gen 28:18-19), and the sanctuary was named Bethel.

Heaven properly the abode of Jehovah, through He dwells with Israel in certain spots, especially on mountains. Hence the ‘holy mountain’ of Zion (Is 11, Ps 105:24, etc), and even came to be used as a substitute for the Divine name.

(b) As just indicated, any sacred spot separated off and surrounded by restrictions as to access and ordinary use (Ex 33) would be marked by a stone, which served for an altar, on which the blood of the offered animal was sprinkled or sprinkled, and at the same time also as a symbol for the Divine presence. There can be no doubt that the stones of the deities was thought somehow to reside in the stones. Hence the primitive adoration to heaven was by hewing the stone or in any way violating it by the application of a tool (Ex 20:2). Moreover, the smearing of the blood, which in the primitive form of worship was shed over the upright stone (Heb. mas-sah, Arab. nisb), or over the heap of stones or cairn (such as the gen-nah of Gn 21:33), contains in itself a very clear indication that the sacred stone was really the deity of the place.

(c) The sacred spring was a frequent accompaniment of the sacred place. In fact, as Wellhausen remarks (Resta 8, 104), wherever human beings were settled down by a sanctuary there must of necessity be water. Moreover, the fertile spot marked by the stone symbol would naturally possess a flowing spring arising from the mysterious water-depth (Deut 33).

(d) Out of the sacred spring, the sacred symbol of the stone or pole standing near the altar, regarded as the symbol of the deity Asherah, goddess of fertility and prosperity. The existence of this goddess was formerly doubted by Wellhausen, Robertson Smith, and others, who maintained that Asherah designated only the sacred pole. But Assyriology has cleared up the existence of this goddess in the proper name Ashaš-nirâ, Ashaš-nirâ, and Abaš-Akhatu, and Abaš-Akhatu.

(f) Holiness was naturally sacrified to the approach of worship, such as altar-bowls, cups, and other vessels of the sanctuary (Nu 4:21, 1 K 14:7-9). It was also applied to materials with consecration of persons was affected or with which it was accompanied, e.g., oil, incense, etc., and, in general, the garments worn by the priest (Ex 28:4-8), as well as to the offerings presented by the people, which were hallowed (Ex 29:36, Lev 23:20-21), any act of ritual Originally in preparation.

In ancient Egyptians, on the other hand, the sycamore was regarded as sacred (see Manpero, Historie, Paris, 1893-96, I, 171, and Greenmanzsche, in ZDMG, 1903, II, 47).

In Arabic we find the word ṣabib, ear- or nose-ring, regarded as an amulet with sacred devotions or names.
fanation, which had to be borne by the officiating priest. An inevitable condition of the holiness of persons and things was that they must be pure or clean. We shall afterwards observe purity and holiness taken up into the ethical realm (Ps 24:4). Here again it is that, though not identical, they come into close connexion. Just as a woman unclean through child-birth could not enter the house of the Lord (Lev 12:4), so uncleanness in things was incompatible with their presence or employment in worship. According to the conceptions of the ancient Orient, demons and uncleanness, decay, disease, and dirt go together.1 Over the preservation of the purity of holy things the sons of Levi had to watch (Dn 29:9). The sins of Israel were considered to affect the holy place and render it unclean. Consequently, on the great day of Atonement, exploratory blood was sprinkled on the altar horns to cleanse the tent of meeting and the altar. The operation itself was indicative of a slaughtered bullock needed for ‘atonement’ (properly ‘covering’; Rsv, see Driver, ad loc.) the altar. Cf. Lv 16:19 (on ref. to a proper Name in Exod 40:12). 

A high degree of sanctity belonged to holy vessels, so that any who touched one became affected by its magic circle of toha. Or, in the language of the original, ‘become holy’ (Heb 2:19). According to Nu 4:14, death might result from contact with them. In this connexion we may note also that a special and necessary condition in the manufacture of sweet incense was that it should be pure (Baudot, H. J. Z. 277-279).

The sanctity of certain animals, such as the camel, ox, cow, horse, pig, mouse, etc., is an obvious subject discussed by Robertson Smith in Rel. Sem.3, 271 ff. Probably not the same element, but varied arguments, operated in various cases in determining the sanctity of an animal and the sacrificial character of its flesh. It is just here that we come to one of those interesting meeting-points between the ideas of uncleanness and of holiness and taboo. The unclean animal may not at ordinary times be sacrificed, because it is a specially sacred animal (Rel. Sem.4, 290). It is only on specially solemn occasions—annual public celebrations or special crises—that such a sacrifice can take place. This may partake of the character of a mystic piscular sacrament or ceremonial, for it is the operation of a cause that constitutes an animal sacred was held by Robertson Smith to be the fact that it was originally regarded as the totemic ancestor of a clan. Subsequent writers on this subject are disposed to abandon this view. Other reasons than totem ancestry are assigned by Benzing.4 In the case of the pig it was holy as belonging to the operation of the Melchizedekian Antetype (Am 8:3, Hos 21:1 (AV v. 8), Is 11:2; cf. 2 K 4:28), the New-Moon and the Sabbath. The appearance of the new moon signalled the commencement of the month (cf. Sir 24:4). Conjoined with the New-Moon, mention is made of the Sabbath. A remarkable list, discovered by Pinches (JPSA, 1904, p. 51f.), places the significance of the Hebrew Sabbath in a somewhat new light. In Babylonian, Eopatu is the name given to the 15th day of the moon, or beginning of the 3rd quarter, i.e. full moon. In the days of the Ptolemies, as we learn from an inscription at Narmath (5), the days on which the sacrifices were offered in Phoenicia were new-moon and full-moon. So also among the Hebrews the festivals of Maqoth and Sukkoth began on 15th Nisan and Tihrih respectively. From these facts Metzold has drawn a sweeping inference. He holds that in primitive Israel, down to the close of the Babylonian Kingdom, Sabbath meant only the full-moon celebration. He regards Kenazel as the original of the same name in New Testament as a seventh day celebration (Ezk 65:1; cf. 25:13; 18:18; 28:29). But, if this be the case, it is difficult to see on what ground Kenazel is justified in reproaching Israel for the non-receivance of a recent innovation without the binding force of old usage. On the other hand, it is not without interest to observe how the ancient Hebrew author conveys to us the inevitable conclusion that the seventh day of the seventh week was an institution of the infant Egyptian. In Israel the sanctity of the number seven was evidently fundamental. We have it in the Biblical form seven, ‘seven’; and in derivatives R129, ‘seventh’; and in the Egyptian, Be‘er-sheba. Moreover, the seventh day of rest was parallel to the seventh year of release in early legislation (Deut 25:9), and also for the field, which was to remain fallow (Ex 21:35; cf. 24:2).

(i) Various theories have been advanced for the explanation of the phenomena, which are probably due to a like reason. The beasts are sacred and kindred beings, for they are the source of life and subsistence. They are kept only in the Syrian provinces as camels and unclean, which implies that the slaughter was an act of primitive magic, fire and water are summoned to the Jew’s aid in expelling demons (see ‘Magic,’ in HDB III, 290).

1 Hence in Babylonian magic, fire and water are summoned to the Jew’s aid in expelling demons (see ‘Magic,’ in HDB III, 290).

2 Rsv, see Driver, ad loc.) the altar. Cf. Lv 16:19 (on ref. to a proper Name in Exod 40:12). 

3 A high degree of sanctity belonged to holy vessels, so that any who touched one became affected by its magic circle of toha. Or, in the language of the original, ‘become holy’ (Heb 2:19). According to Nu 4:14, death might result from contact with them. In this connexion we may note also that a special and necessary condition in the manufacture of sweet incense was that it should be pure (Baudot, H. J. Z. 277-279).

4 The sanctity of certain animals, such as the camel, ox, cow, horse, pig, mouse, etc., is an obvious subject discussed by Robertson Smith in Rel. Sem.3, 271 ff. Probably not the same element, but varied arguments, operated in various cases in determining the sanctity of an animal and the sacrificial character of its flesh. It is just here that we come to one of those interesting meeting-points between the ideas of uncleanness and of holiness and taboo. The unclean animal may not at ordinary times be sacrificed, because it is a specially sacred animal (Rel. Sem.4, 290). It is only on specially solemn occasions—annual public celebrations or special crises—that such a sacrifice can take place. This may partake of the character of a mystic piscular sacrament or ceremonial, for it is the operation of a cause that constitutes an animal sacred was held by Robertson Smith to be the fact that it was originally regarded as the totemic ancestor of a clan. Subsequent writers on this subject are disposed to abandon this view. Other reasons than totem ancestry are assigned by Benzing.4 In the case of the pig it was holy as belonging to the operation of the Melchizedekian Antetype (Am 8:3, Hos 21:1 (AV v. 8), Is 11:2; cf. 2 K 4:28), the New-Moon and the Sabbath. The appearance of the new moon signalled the commencement of the month (cf. Sir 24:4). Conjoined with the New-Moon, mention is made of the Sabbath. A remarkable list, discovered by Pinches (JPSA, 1904, p. 51f.), places the significance of the Hebrew Sabbath in a somewhat new light. In Babylonian, Eopatu is the name given to the 15th day of the moon, or beginning of the 3rd quarter, i.e. full moon. In the days of the Ptolemies, as we learn from an inscription at Narmath (5), the days on which the sacrifices were offered in Phoenicia were new-moon and full-moon. So also among the Hebrews the festivals of Maqoth and Sukkoth began on 15th Nisan and Tihrih respectively. From these facts Metzold has drawn a sweeping inference. He holds that in primitive Israel, down to the close of the Babylonian Kingdom, Sabbath meant only the full-moon celebration. He regards Kenazel as the original of the same name in New Testament as a seventh day celebration (Ezk 65:1; cf. 25:13; 18:18; 28:29). But, if this be the case, it is difficult to see on what ground Kenazel is justified in reproaching Israel for the non-receivance of a recent innovation without the binding force of old usage. On the other hand, it is not without interest to observe how the ancient Hebrew author conveys to us the inevitable conclusion that the seventh day of the seventh week was an institution of the infant Egyptian. In Israel the sanctity of the number seven was evidently fundamental. We have it in the Biblical form seven, ‘seven’; and in derivatives R129, ‘seventh’; and in the Egyptian, Be‘er-sheba. Moreover, the seventh day of rest was parallel to the seventh year of release in early legislation (Deut 25:9), and also for the field, which was to remain fallow (Ex 21:35; cf. 24:2).

(i) Various theories have been advanced for the explanation of the phenomena, which are probably due to a like reason. The beasts are sacred and kindred beings, for they are the source of life and subsistence. They are kept only in the Syrian provinces as camels and unclean, which implies that the slaughter was an act of primitive magic, fire and water are summoned to the Jew’s aid in expelling demons (see ‘Magic,’ in HDB III, 290).
the sacredness of the number seven. Wellhausen (Protest, Berlin, 1883, p. 117) and others, who base the week or seven-day portions of the month merely on the moon plus an apparent origin for the widely prevailing and firmly rooted tradition among the Semitic peoples (cf. Rel. Sem., 191 f.), agree that the sacredness of the number seven.

We follow the contemporary view, which agrees with the astral theories, theories we may agree that Schrader, Winckler, Zimmern(!), A. Jeremias, and Benzerger are justified in holding that the sacredness of the number seven is based on the seven planetary deities, including the moon and sun. The order of these planetary deities in ancient Babylonian art is: Zimmern (KAT 622) says that the original order was: Moon (Sin), Sun (Samael), Mercury (Nabu), Venus (Istar-Dilbat), Mars (Ninig), Jupiter (Marduk), Saturn (Kamsu). Probably the seven-branched golden candelabrum in 2604, with its seven lamps, which (v.37) correspond to the seven eyes of Jehovah, is based on the seven planets of the celestial world.

The Hebrew Sabbath signifies, according to its Hebrew etymology, that it was a sacred day, i.e., consecrated to Jehovah, in which ordinary human employments ceased (Ge 26, Ex 20). In the same way the primitive Heb. Sabbath corresponds to the Heb. seventh day, which was more strictly kept with restrictions, like the Jewish post-Exilic Sabbath. The seventh day in Babylonian art was sacred to Bel (Marduk) or to Nebuchadnezzar, and the planet was a traditional one. This character attaches to the 7th, 14th, 21st, and 28th days of the week. We can see how this is listed with reference to the 7th day of the month Tammuz. This 7th day was dedicated to Marduk and Sarpanitu:

[iii: 1] Art. Eusebius, the Church Father, gives a detailed account of the sacredness of the number seven. Wellhausen (Protest, Berlin, 1883, p. 117) and others, who base the week or seven-day portions of the month merely on the moon plus an apparent origin for the widely prevailing and firmly rooted tradition among the Semitic peoples (cf. Rel. Sem., 191 f.), agree that the sacredness of the number seven is based on the seven planetary deities, including the moon and sun. The order of these planetary deities in ancient Babylonian art is: Zimmern (KAT 622) says that the original order was: Moon (Sin), Sun (Samael), Mercury (Nabu), Venus (Istar-Dilbat), Mars (Ninig), Jupiter (Marduk), Saturn (Kamsu). the Stone of Mesha', it is the god of Meoa, Chemoah, who says to Mesha': 'Go take Nebo against Israel' (line 14). Among the Hebrews, Jahweh Yahweh, Jahweh of the celestial star-horses was worshiped before every military expedition, and before Israel in the ark carried into the battlefield (1 S 4:4), and is consulted by the priest-soothsayer who before every military operation of ancient Israel (1 S 14:29-30, 2 S 5:1). The Syrians had the same custom; for we read in the Annals of Ashurnasirpal (col. ii. 30) that in overrunning a hostile Syrian tribe the lord, or soothsayer-priest, who went at the head of their host (atik paum annmundtum), was captured. Like other Semites, the Hebrews inaugurated war by sacrifices. This was said to 'consecrate' war (sip; Ass. Mis 3, Jer 6, cf. Jer 3); hence the burnt-offerings at the opening of a campaign (Jg 6:25, 20); 1 S 14:13, 1 S 11). With this conception of holy war and consecrated warriors (Is 13) we must connect the sexual abstinence which was maintained during military expeditions among Hebrews and Arabs (Zoh. Sem. 245; cf. L 20, 2 S 11). With this we must also associate the gruesome custom of the 'ban' (grg), which surrounded all companions and inmates, captured in war, and forbad their appropriation to human uses. This meant the wholesale destruction of the 'devoted' objects expressed by the denominative nav'A, in housing (see e.g. Zoh. Sem. 245, cf. Jer 9:24, 2 S 25:2), in which ym is a close parallel to the Stone of Mesha', lines 14 f. 52. In the latter case Mecha's devotes to Astar-keshom (line 17) pray that the entire population of Nebo, both men and women.1

(b) The sacred name of Deity had a special and awful potency, since in ancient Semitic conceptions it involved the actual presence and personal power of the Deity, which, when the name was uttered, were summoned into active exercise. Thus the tetragrammaton (wv) was too awful for pronunciation by ordinary human lips, according to the usage of post-Exilic Judaism. We know that in the 3rd cent. B.C. it was avoided in the public reading of the Hebrew Torah, a representation in the LXX by atophex, being substituted for it. Even the combinations ṭ and ṭh, though abbreviations of the sacred name, came to be avoided as numerical signs of 15, 16 (c. and m being respectively substituted). On the use of the Divine names and those of the Hebrew patriarchs in exorcisms, and generally in the mysticism of exorcism and 'sorcery,' in HDB i. 815, iv. 604; Conybeare, in Trans. of the Third Internat. Congress for Hist. of Relig., Oxford, 1908, li. 356 ff. The wide prevalence of the potency of sacred names in Bab. incantations needs only to be mentioned here.

3. Holy persons.—(1) Chief among these were the priests. In Ez 20, Lv 8, elaborate details of the rites of initiation are given whereby priests are installed in their office. In these rites we shall merely note (1) the washing of the person with water (Ex 29); cf. washing the garments in Ez 16:14 at Sinai; (2) spashing bullrocks and rams' blood on the altar-horns and round about it (yw, 16:18); the ram's blood being placed on eight ears, etc., and thumb of the Aaronidae (yth); (3) special garments and 'holy crown' (yv); (4) anointing with oil (yv). The fundamental conception underlying these ceremonial cleansing operations (washing and blood-sprinkling) is to remove all contamination which would disqualify the priest for his sacred functions. These functions are defined in Nu 18:19 as the taking of the holy lot. Carrying the holy ephod, the vestments of the holy vessels, and the approach to the altar. In the later Heb. legislation, which has just been quoted, these functions belonged to the sons of Aaron. It is, however, fully recognized that the substance of P's ceremonial legislation is very ancient; and, if we possessed fuller documentary material from ancient Babylonia, we should properly be able to show a larger number of close parallels between the ceremonies of initiation for the Babylonian priest and those of the Levite in P than have yet come to light. Several interesting and important analogies may nevertheless be noted.

(a) The king (q.v.), like the priest, was anointed with oil (yv). Anointing (q.v.) doubtless arose from the ancient magical custom of smearing or pouring unguent on the body to endow the subject with certain qualities. Thus the Arab and E. Africans believe that lion's fat inspires a man with boldness, so that a wild beast flees from him (see GB 1104). From the Tell el-Amarna tablets we learn that the custom of anointing kings prevailed in Western Asia in the 15th cent. B.C. In a letter from Aced-nirari, king of Nubabili in N. Syria, addressed to the king of Egypt, Amenhotep III., it is stated that a previous Egyptian king had poured oil on the head of the writer's grandfather and established him as king (GB 1104). In his Lectures on the Early History of the Kingship (London, 1906), have familiarized us with the supernatural endowments attributed to the early king, who was regarded as a deity or quasi-deity. Israel similarly stood in awe of the 'Lord's anointed,' whose person, like that of a priest, was sacrosanct (1 S 24:18; 2 S 12). The Assyrian king called himself the offspring or favourite of a god (sinatu Assur, naram Sin). Moreover, the king assumed priestly functions. This we know to have been done by David (2 S 6:17) and Solomon (1 K 3:16). This was also the tradition in Assyria. Tiglath-Pileser I. (1100 B.C.) calls himself 'atipus, or priest, of the god Sin-na. Sargon calls himself the šallu, or vice-regent of Bel, and the idakku, or chief priest, of Assur.

(b) Physical defects were disqualifications for a Hebrew priest and also for a Bab. soothsayer (cf. Lv 21:6). Among the Babylonians, pointing at the ūy, lack of teeth (buīn), and a maimed figure (nāyipu abīn) were accounted disqualifications (H. Zimmer, Beiträge, Leipzig, 1898-1901, p. 87).

(c) As the Aaronic priesthood was hereditary, similarly the Bab. bardu, or officer of soothsayer, belonged to a sacred hereditary caste whose functions involved special mystic knowledge and the inspection of the liver. This tradition can easily be traced back as far as the time of Ḥammurabi (c. 2100 B.C.; see Littmann, 321, 67).

(d) In the ritual tablets of the ṭipus, or priest-magician, who dealt in conjurations (ṭipu) whereby diseases were removed, or in expiations whereby sins were stoned, we read (Zimmer, n. 28, col. ii. 19 f.) that the matnānu (who held an office closely allied to that of the ṭipus) (Zimmer, n. 93) is to pass to the gateway, sacrifice a sheep in the palace-portal, and smear the threshold and posts of the gateway right and left with its blood (cf. Ex 12:21). Respecting these incantation-rituales and the multitudes of facts, see Zimmer, Beiträge, and the art. 'Priest,' in EB.114. Israel also in pre-Exile days had the rōth, šāmānu, mārēn, yīdrē šāmān, and bālī ṭāb. Others are obscurely mentioned in D 16:18.

In early times the priest in Israel was essentially soothseer, who declared the Divine will by Urim and Thummim, rod, arrows, or other forms of the sacred lot. Carrying the holy ephod, the sacred vessels, and the answer needed on any expedition. In early Arabia the kāhin (Heb. 73) was the soothseer who employed the divine oracle, as described by Muhammad as an abominable work of
HOLINESS (Semitic)

Satan (Qur. v. 92; cf. Mio 5°, Jer 277). Cf. art. "Soothsayer," in EBD iv. 598. In later times the priestly function in Israel became chiefly ceremonial and sacrificial, while the function of soothsayer (kōdeš, etc.) was separate and specialized. Out of the priest-see of early times, called rōʾēḏ, emerged the prophet (bēḏār), whose official person as "man of God" was also sacred, whose rod possessed magical power (2 K 4:35; 1 K 8:23) as well as his garment (2 K 3:2; cf. Mk 3:16), on whom God's spirit rested, and to whom the word of the Lord came. See art. "Prophet," in EBD 11.

One of the most primitive and significant as well as most moral among holy persons in the Semitic peoples was the ʿādād (sodomite attendant) and the qāṭāʾīḥ, or priestess-prostitute, who infested the Canaanite-Hebrew sanctuaries like the corresponding ʿādādāt and ḫāʾāʾāt of Babylonia. The wide prevalence of this phase of ancient Semitic life is attested by Gn 38:20, 21, 1 K 14:21, 23, 2 K 5:2, Am 5:24, Hos 4:13, Dtr 23:17 (Heb. 23:20), and is especially connected with the ḫāʾāʾīt cult (C. A. Barton, Sems. Origines, London, 1902, p. 83; N. Nilson, Études sur le culte d'Atar, Leipzig, Paris, and St. Petersburg, 1911; see, further, Hierodouloi [Sem. and Egypt.]).

We have represented in Israel the conception of a holy people. Of this the locus classicus is Ex 19:6 (14), in which the privilege is made conditional on obedience to the terms of the Sinai-covenant. Israel is called a Divine possession above all the peoples of the world. But this was in reality the re-assertion of a long recognized fact. Israel was Jahweh's people, just as the Moabites were people of Chemosh (cf. Jg 5:5, Ex 15:10). Israelites as individuals were just as truly sons and daughters of Jahweh. Similarly Palestine, the land occupied by Jahweh's people, was holy also (cf. Ws 12), and is called Jahweh's house (Hos 9:10, 9: and Hbr 3:5). All this was in accord with revelation. The prophetic demand that the adversaries of Jahweh's land be, therefore, unclean. The corollary to this conception of Israel as a holy people is found in the prohibition of marriage with foreign races prescribed by later legislation (Dt 7:3). This became rigorously applied in the days of Ezra, who sternly repressed such connexions, whereby the holy seed became mingled and thus contaminated (Ezra 9:8).

II. THE CONCEPTION OF HOLINESS RAISED TO AN ETHICAL LEVEL.-We have hitherto traced, though only in outline, the far-reaching dominion of God's conception of a holy people over a wide extent of persons, material objects, and modes of human activity. In all of these holiness appears as a positive quality derived from close contact with a Deity or supernatural power which becomes deterrent and restrictive, circumscribing human activities which are free as to ordinary or non-holy objects. Holiness in primitive religion, like much else, is concrete and quasi-physical, and, moreover, is bound up with magical elements of tabu. We have now to investigate how in its more advanced stage it became gradually and partially emancipated from the material and magical characteristics of primitive religion as it became ethicized.

Holiness, as we have seen, is closely associated with the personality of Deity. That which is brought most closely into contact with Him is most holy of all. Thus the hindmost recess of the Temple was sealed, and where only the high priest on the most sacred day of the post-Exilic calendar (the Day of Atonement) could enter, was called the Sanctuaryemployed (Ex 29:36). Accordingly, sanctity, with all its associated elements of restriction and reserve, admitted of degrees until at length we come to the Deity Himself, who in His exalted and inaccessible loneliness and power is called by the thrice repeated and so emphasized "Holy" in Isaiah 6. The same principle that applied to things would a fortiori apply to God Himself. If eating the remainder of the slain beast ( rendered "peace-offerings,') which should be burnt on the third day, was an act of profanation because it was God's holy thing (Lv 19), it was a far more terrible thing to behold God Himself. No man can behold God and live (Ex 33; cf. Jg 13:18, Is 6). The quality in the Deity which avenged with terrible penalties all violations of His presence, dignity, name, or belongings was called "jealousy," and He was accordingly designated a "jealous God" (Eg 33:19; Ex 20:15).

God's position on immeasurable and supreme power was designated by this term ʾṣāl, and He Himself was ʾṣāl, "holy." But in His external self-manifestation He was invested with "glory" (ʾqār). These two characteristics of Divine holiness, the "glory" and holiness" are closely combined; but with this distinction, that, while "holiness" marks out His inaccessible exaltation and power, which are restrictive on human activities, His "glory" exhibits Him in His earthly and visible self-manifestation (Is 6; Bandissi, Stud. zur sem. Religionstgesch. ii., 11, 104-107).

The prophets, who were the great teachers of Israel, did not in any degree diminish, but rather exalted, these conceptions of Jahweh unapproachable and terrible power and His manifested grandeur. The universality of His sovereignty and power is emphasized by Amos, by Isaiah, and above all by Hosea (Hos 14:10; cf. Mc 6:45). But the teaching of the 8th cent. Judean prophets did not end here. The stress which Amos and Isaiah placed on the righteousnesses of Jahweh and His ethical requirements (Am 5:11-15, Is 1:17-20, 2:20-21) shifted the centre of gravity in religion from ceremonial to conduct. Ceremonial tabus and sacrificial forms count for little. In Jeremiah's teaching the external enterprises of Israel have disappeared with the destruction of the State and the Temple. Jahweh has established a new covenant with His people independent of external ordinances and enactments, for it is internal, spiritual, and personal: "I will put my law within them, and in their heart will I write it" (Jer 31:34-35).

The effect of all this was far-reaching, and it gradually brought about an "Umwerfung aller Werte"—a transmutation of all values, which affected the conception of the Divine holiness and all related in its earlier stage. God's character and demands were essentially expressed in righteousness, this permeated also the essence of holiness whether in its early or later stages. A man is to afflict his soul is to set the oppressed free and bestow bread on the hungry (Is 66:12). "Rend your heart, and not your garments" (Jl 2:12). This affected the language, not only of prophecy, but of legislation. Circumcision was to be of the heart (mind), and not of the flesh only (Dt 10:13-20). It entered even into the priestly legislation of the guilt-offering (Lv 6:27), and in the "Code of Holiness" finds its due place (Lv 20-26). This was doubtless a reinforcement of ethical elements which belonged to Israel's old religion, since all religion involves social relations and a social order, and therefore these elements found a place in the older codes of legislation. But prophetic teaching gave them a new and peculiar importance, God's character and demand to displace the externals of ceremonial religion. This is manifest in some of the Psalms, e.g. 50-6; where sacrifices are requiescated as irrational; 61:12, where the true sacrifices are a broken and contrite heart. Perhaps the most notable expression is to be found in Ps 15 (which reflects the spirit of Mic 6:6-8): "Who walketh uprightly, and worketh righteousness, and is faithful in his thoughts (and not merely in
external acts.\* The following verses express this
railment:

We have entered here into a higher realm and
atmosphere, and these new conceptions would be
fostered by the new conditions of post-Exilic
Judaism, when there was a vast Diaspora, and the
Synagogue with its worship took the place of the
national Temple with its sacrificial ceremonial.
Consequently prayer (which alone formed com-
panied sacrifice) now took the place of sacrificial
ceremonial (which was legitimate only in the
central Jerusalem sanctuary).
Moreover, we now find a tendency to shift ‘holy,’
which was ethical, from non-ethical things to
personal objects, to which it can more properly
apply. God in Deuteronomy is ‘Israel’s Holy
one’ par excellence. Purity is closely associated
with holiness, and has moral values. In Hab. 1:13,
‘holy’ is applied to Jahweh in His ethical purity,
which is so great that He cannot behold evil—an
echo of Is. 6:1. From these ethical conceptions of
God’s holiness it is but a step to the conception of
God’s ‘Holy Spirit’ (Is 63:18, Ps 51:19, Wis 8:25).
Those who form God’s remnant, the angels, are
called ‘holy ones,’ since they are the ‘sons of God’
(Job 1:14, cf. Ps 89:6).

Nevertheless, the old and primitive non-ethical
ideas of holiness still held sway and were still
perpetrated in Esekiel’s idea scheme (chs. 40–44)
of Israel’s restored condition, and in the subsequent
Leviticus legislation. We even find them in the Mosaic
(Yad. iii. 2. 41, iv. 5. 6; cf. ‘Eduth y v. 3), where
it is stated that the canonical Holy Scriptures
decide the hands of those, including the teaching of
the schools of both Hillel and Shammai. In other
words, this holiness thereby becomes contagious
(Weber, ‘Judenth.,’ Leipzig, 1897, § 221. 1). Texts
from these passages are still employed by Jews as
magical charms and prophesy-
ful promises of Arabic illustrative materials as well as
those derived from the wider field of
religion. M. J. Lagrange’s ‘Essai sur les religies sémittiques,’
Paris, 1906, esp. chaps. IV–VIII, contains a mass of material
which the researches of Amyot and find their due place.
In addition to these, J. Skinner’s art. ‘Holiness,’ in BD, and
R. Kittel’s ‘Heiligkeit Gottes im AT.’ In PBD, should be
consulted. Among modern writers, Gray, ‘Numbers’ (ICC, Edinburgh, 1908), and A. Rostorf, ‘Heiligkeit
Israel’s’ (Kurzer Handkommentar, Tubingen, 1901) (see
esp. on ch. 11); R. Marx, Geschicht der jüdischen Religion,
Stuttgart, 1908, §§ 5–11; E. Stade, ‘Biblische Theologie des AT.
Tubingen, 1908, I, §§ 65–70. Cf. also the other works cited
in the course of this article.

HOLY WEEK.—See FESTIVALS AND FASTS (Christian).

HOME.—The word (see OED, s.v.) signifies ‘a
dwelling-place,’ regarded from the moral and
the social point of view as the fixed residence
of a family, providing for its members a place of refuge
from the labour and turmoil of active life, and
cherished as the abode of those to whom a man is
bound by the closest and most intimate ties of
relationship. The idea of the word suggests, accordingly, those of permanence, security,
familiarity. To be ‘at home’ implies that a man
has reached, at least for a time, the end of his
wanderings (cf. Ps 26); that he is beyond the
reach of the perils of wayfaring; that he is no
longer a stranger and foreigner, but a member of
a household, surrounded by those who understand
him and sympathize with him. When, for example,
St. Paul speaks of the Gentiles as oikos tōn θεοῦ
(Eph 2:19), he is contrasting their former outcast
and alienated condition with the privileges of mem-
bership in God’s family or household. Under all
the aspects mentioned above, death is sometimes
spoken of as ‘going home’ (cf. Ec 12:18; ‘long home,’
with Plumptre’s note), and the disembodied state
is described by St. Paul as the being ‘at home with
the Lord’ (2 Co 5).

There were, doubtless, numerous instances of
beautiful domestic life among the Hebrews. The
narratives (J and E) of the 9th and 8th centuries
b.c. throw much incidental light on the family life
of ancient Israel. There was apparently a certain
familiarity (except in the case of the monarch) towards
monogamy; and, though paternal authority was
absolute, and extended to the juss necis, we do not
find instances of harsh or unjust treatment. The
same remark applies to slaves. They were the
private property of their masters, but despotic
rights do not seem to have been as a rule abused.
The duties of hospitality were held in honour, and
guests were welcomed with kindness and liberality.
The Book of Proverbs illustrates the high esteem
in which family life and family duties were held
in ancient Israel. As regards the later Judaism it
has been said that ‘there were no homes like those
in Israel,’ and two similar Talmudical sayings are
probably the fruit of common experience: ‘Marriage
are made in heaven,’ and ‘God dwells in a
pure and loving home’ (see A. Edersheim, Life
and Times of Jesus the Messiah, London, 1883,
bk. ii. ch. 9, and JE, s.v. ‘Family and Family
Life’). To a smaller extent the feeling for ‘home’
may be traced in classical antiquity (see, for in-
stance, Homer, Od. xxvii; Soph. Acharn., 590–590, Phil.
492–496; Ovid, Trist. iii. 4. 53 ff; Virg. Ec.
I.; Tit. Eleg. i. 1; Plin. Ep., etc.; cf. S. Dill,
Roman Society from Nero to M. Aurelius, London,
HOME

1904, p. 188 f.); and, for the witness of Latin inscriptions, see, besides Miss C. G. Bagg, The Church's Race under the Roman Empire, Oxford, 1905, Lect. 4, and also in India (cf. the statement of the Pañchasara, II. 49, that even heaven is not so precious as this body, but he who turns to it is a son of the gods). 8 See, further, Bohtlingk, Ind. Spr. Text. 8, Leipzig, 1870-73, nos. 1013, 1943, 6048, 6839), but it has been said with even greater truth that 'home is specially Teutonic word and thing. . . . The life of home has become the greatest possession, the greatest delight, the great social achievement of our race; it is free from the sordidness and darkness without, an ample compensation for us so much as we want of the social brilliancy and enjoyment of our Latin brethren. Reverence for the household and household life, a high sense of its duties, a keen relish for its pleasures, this has been a strength to German society and much to unite it' (R. W. Church, The Gifts of Civilization, ed. London, 1850, p. 333).

In England the new conceptions of life which Puritanism introduced tended powerfully to raise the standard of family life.

'Home, as we conceive it now, was the creation of the Puritan.' (J. R. Green, Hist. of the English People, London, 1870, i. 39.)

So Emerson, writing in 1847, testifies that 'domesticity is the topmost which enables the (English) nation to support its life and enjoy its prosperity. The motive and end of its trade and empire is to guard the independence and privacy of their homes, to multiply and care for their children, and all the rest.' (Mt 28:19; see also Mt 16:18.)

The special development, then, of the home-forming tendency seems to be characteristic of the Teutonic race; but it is a common human instinct, and, as such, finds its fuller consecration in the course of the gospel. Naturally, the spread of Christianity in the pagan world was responsible for many tragedies of domestic life. Christ's own words fore-shadowed the sin in upon affection and consciences, which would inevitably follow conversion (Mt 10:31-37), and such a passage as 1 Co 7:29 indicates one of the results was bound to arise. In early Christian documents we read of wives embracing Christianity and refusing to live with their husbands (e.g., Just. Apol. ii. 2; cf. Eus. HE iv. 17); in the persecutions, frequent instances are recorded of parents pleading with their children, and children with their parents, if sons disowned by their fathers, and slaves by their masters; of wives divorced, and children disinherited (see Harnack, Expansion of Christianity, Eng. tr., London, 1904, bk ii. ch. 2, for references). But, where the gospel had free course, it issued in the consecration and elevation of family-life—a fact of which the Apologists supply ample evidence.

The fundamental weakness of family life in Roman society was the exaggerated idea of the patria potestas. Domestic duty, it has been well said, was summed up in a single article—that of absolute subjection to the head of the household. It was only by a very gradual process that the wife rose from being the chattel and slave to be the equal of her husband. Filial affection was the rarest of virtues under a system which placed the son at the absolute disposal, and under the despotic control, of his father. In the early centuries of the Empire, various reforms tended to mitigate this state of things. Not only the sons, but the slaves, of the Roman householder found their position improved by a series of legislative reforms (see Lecky, Hist. of Eur. Morals, London, 1869, i. 297 f.). But, as has been pointed out, the moral consecration of family life was the special task of Christianity.

This consecration may be said to begin with our Lord's subjecting the discipline of home life at Nazareth (Lk 2: 41) and with His readiness to hallow family life by His presence and blessing (see Jn 2:11; Lk 10:38). In His letters to the churches of Asia (Eph., Col., Philm.), St. Paul deals with the leading principles of home life in some detail, possibly because 'in the social traditions of "Asia" a certain prominence appears to have attached to the family idea' (H. C. G. Moule, Colossian Studies, London, 1896, p. 154). It is said of Colossians that 'that of husband and wife, that of parent and child, that of master and servant—is exhibited in the light of the Christian ideal. The teaching of 1 P 3:2-5 is illustrated in the home and by the readers of the same race. Perhaps the leading idea of St. Peter is that the gospel confirms and sanctifies the element of order and subordination which lies at the root of stable social life. Both to wives and to servants he preaches the duty of 'subjection.' St. Paul's precepts (Eph., I Cor.) seem also to apply, in the region of family life, the general duty of mutual submission (Eph 5:22); he lays more stress on the principle of active love which subordinates self to the service of others. Both teachers appear to regard the family or home as the appointed sphere of moral discipline and probation for the great majority of mankind, and St. Paul derives its sanctity from the fact that it reflects the mysterious relationships which subsist within the very being of Deity itself (Eph 5:22). It should also be remembered that to the mind of our Lord Himmae the family presents the closest analogy to the new social order which it was His mission to reveal. God is the Father of a family; and the man, and woman, and children, and all their days, are bound to Him (Mt 25:34).' Also the use of σεβόμενον, σεβόμενον in the Epp., and see Harnack, op. cit., bk. iii. ch. 3. In such early documents as Clem. ad Cor. i, Polyc. ad Phil. 4, we find the line of teaching and proofs of its actual influence.

It does not fall within the scope of a short article to deal with all the social and economic tendencies, or the moral and social theories, which threaten the Christian home. It may suffice to point out that the purity and sanctity of Jewish homes was mainly due to the prevailing regard for the chastity of women, and that, where there is any lowering of standard in this particular, the institution of home is threatened. In Rome the growth of moral corruption, avarice, the love of ease, and extravagance, all led directly to the aversion for marriage, the perilous consequences of which Augustus strove to avoid by direct and drastic legislation (see M. M., Das Friedliche der Kleriker, Leipzig, 1870, p. 71 ff.). The rise of monachism and the passion for comitie and solitary life became the occasion of vehement and one-sided disparagement of family duties and the frequent rupture of family ties (see Lecky, op. cit. ii. 129). Nor can it be denied that the institution of family life is threatened in modern times by a spirit of individualistic selfishness which prefers the comparative freedom and ease of a celibate life to the duties and responsibilities involved in marriage. But, apart from all this, we may observe that the possibility of home life, as contemplated by the NT writers, depends to some extent upon conditions which can no longer be taken for granted. The problem of the family is closely connected with the modern problem presented by the aggregation of masses of people in large cities; and it is certain that deep-seated industrial causes are tending to undermine and break up family life. To a large proportion of the working classes in Europe and America, anything like a life in its highest form is virally prohibited by the conditions amid which they pass their lives. A further danger which threatens home life is involved in defective and unsound ideas of what constitutes the good and well-being. It is the obvious duty of the Christian Church to encourage any corrective tendencies, any social endeavours, which make for the integrity and purity of family life. What has been called the battle with the slums is a real contribution to the family problem; and all Christians are bound to take an interest in any scheme for the better
housing of the poor, multiplication of suburban homes, improved sanitation, etc. (on this subject, see F. G. Peabody, Jesus Christ and the Social Questions, 1858, pp. 270, 274). Further, if life is threatened by certain socialist theories, which find in the family an insuperable obstacle to their cherished ideal of a people's life in which personal interests are to be sacrificed to the welfare of the community. Such theories regard marriage and the family as a stronghold of individualism, hindering the citizen from 'complete devotion to the socialist ideal' (Peabody, op. cit. p. 160 ff.). On the other hand, the tendency of anthropological speculation seems to be in the direction of vindicating against socialist attacks the permanent function of the family, regarded as the highest result of the historic process of social evolution. And, again, if it is true that the individual finds his true self-development in subordination to or co-operation with his fellows, if corporate life is a reality, the great instrument for training character, it is obvious that the family has higher social significance than was once perceived. Life is the fundamental form which life in common can assume. It involves precisely that training in social affections, that discipline in self-sacrifice and mutual service, which corresponds most closely to the Christian conception of worthy human life.

The family exhibits in the simplest and most unanswerable type the truths of dependence and trust, of subordinancy and obedience, of obligation and helpfulness by which every form of true society is sustained. In the family we learn to set aside the conception of right and to place in its stead the conception of duty. Thus the family figures in the training of the next generation (1 Ti 5:18). Again, it is noticeable that the gospel does not multiply directions in regard to the Christian's conduct in the larger spheres of human life—the world of business, of politics, of professional life. It confines itself to regulating family life with special minuteness and care; nor does it demand more than the right of individuals as to enforce their duties. Thus, in Eph. and Col., St. Paul gives a summary of the simple but far-reaching rules which should control home life. He addresses his turn husbands, wives, children, and servants—that is, all members of the typical household. Each in his turn is exhorted to bear in mind his or her duties and the rightful claims of the other. And, again, it is the principles that give to home life its sacredness and importance.

The desire for wedded life and controlling the choice of a partner (cf. 1 Co 7:1); inspiring the 'nurture and admonition' of children and leading a sanction to their obedience (Eph 6:4); giving dignity to the necessary tasks of the household and even to the fulfilment of menial duties (Eph 5:22, Col 3:24). All is to be observed and fulfilled 'in the Lord,' in union with His mind and under the leading of His Spirit; all duties are to be discharged 'as to the Lord and not unto men,' in the consciousness of His continual presence and in single-hearted desire to serve Him.

The home is to exhibit in its perfect beauty the working of the law of love. Love is the duty commended to the husband in particular. Men are to love their wives with reverence, tender regard; with them resides the element of authority, but the rightful exercise of authority is not to be allowed to become a 'root of bitterness' or cause of irritation. And love is to be kept true and pure by habitual recollection both of the entire dependence of the wife on her husband, and of the sacred mystery which wedded love symbolizes—the self-sacrificing love of Christ for the Church (Eph 5:25). The mutual love of those who are brothers by birth (φιλαδελφία) is a type and earnest of that larger love of those who are brethren in the family of Christ, the family in the strict sense being an image of the Kingdom of God, or as it has been described, 'a State and a Church in little,' in which the binding and inspiring power of affection may be first realized.

St. Paul and St. Peter alike lay stress on the law of dutifulness. While the gospel recognizes woman's spiritual equality with man, it also guards the rightful responsibility and leadership of the man; on the other hand, nothing is said to favour the assertion of leadership on the part of the husband. On the children is impressed the duty of obedience; nothing is said to them of possible pretexts for resisting parental authority; on the other hand, the parent is warned against the misuse of authority over either children or servants (Eph 6:4). Fathers are exhorted to show diligence and faithfulness; nothing is said to them of 'right' or 'liberties' or of the 'iniquity' of a dependent position. The master, for his part, is urged to keep alive in himself the sense of responsibility towards those who are his equals in the sight of the heavenly King and Judge (Eph 6:9; see Monle, Ephésiens, 1900, chs. xv, xvi, Colossians Studies, ch. xi.).

Another principle implied, though not expressly indicated, in the NT treatment of the Christian home is the law of social service. Home love is in germ the love which is to fulfill its obligations in every relationship of life. It includes

'Love, as God hath loved you,'

And eido me.
phileters, but training men in large-hearted sympathy and wide social affection.

The closer and warmer the home affection, the larger and stronger should become those social instincts which make life tolerable except in a community. And if they stop short at the domestic limits, and refuse to open out to their wider, deeper and more comprehensive, one as much as against the State ("R. S. Holland, in Lombard Street in Lent, London, 1892, p. 184 f.; see also R. S. Macleod, "Introductory Lecture to Social Philoso-

Home life, in a word, fails of its divinely ordained purpose, if it does not educate and fortify the spirit of social service, if it does not awaken compassion, and deepen insight into the social needs of mankind.

In this article we have been concerned with the ideas presented by the NT. But it should not be forgotten that, while the home is an institution which has been evolved by the needs of the race—an institution to which the Christian spirit has added new grace, justice, and stability—modern conditions have brought us to what may be a period of re-construction, when it will be the task of Christian to define anew the essential principles of family ethics. Industrial conditions, new phases of religious thought, the movement for the higher education of women and their free ascription to independent professions and occupations—these and such-like changes have materially affected the normal features of home life. 'Our democracy is making inroads upon the family, and a claim is being advanced which in a certain sense is larger than the family claim' (J. Addams, Democracy and Social Ethics, London, 1902, p. 77).

The position of boys and girls earning an independent income at a comparatively early age, the modern revolt against domestic service, the new ideals of social usefulness which have been inspired by a wider outlook and an improved education—these things have raised personal problems in family life, the solution of which depends upon submission to the progressive guidance of the Christian spirit. It must suffice to indicate the circumstances which, apart from the conditions which directly tend towards the decay of home life, render the fulfillment of home duty a less easy task than it was in the first age of Christianity. On this subject the work by J. Addams quoted above is interesting and suggestive. It remains true that the first of Christian social duties is 'to show piety at home' (1 Th 5), and that home must always continue to be the school of those graces and virtues which men need for effectual service, whether in the State or in the Church.

LITERATURE.—Besides the various books mentioned in the body of the article, see the works of Harries, Dorner, Mar-\n

R. L. OTTLEY.

HOMER.—The religion and ethics of Homer—whether they belong to an actual evanescence 'Achaean' period in the history of Greece, or are the result of a combination of older and newer elements effected as part of a general process of evolution and harmonization extending over many centuries—have at least a superficial aspect of consistency. This is, no doubt, partly due to the peculiar quality of Homerian art, its unsurpassed lucidity and clearness of outline; to the Homeric spirit with its hatred of vagueness and mysticism. But this temper and art are themselves so characteristically Hellenic that we cannot look to them for any explanation of the great story behind the story. The religion of the Iliad and Odyssey and that of historical Greece. For the beliefs of Homer are as distinctive as they are definite, and are now admitted by every one to be the product of historical causes. What those causes were is becoming every day more and more obviously the real problem at the heart of the 'Homeric question.' Till they have been discovered, we must be content with a statement of the facts generally within our knowledge, although it must be admitted that the whole significance of these is altered according as one does, or does not, regard them as representing an actual stage (to which the Homeric poems themselves are our only witnesses) in the development of Greek religious thought.

It will be understood that 'Homer' is used throughout this article as a synonym for the Iliad and Odyssey, without reference to the question of their authorship. The books of the Iliad are quoted according to the capital letters of the Greek alphabet, the books of the Odyssey by the term.

1. RELIGION.—The gods. These are, of course, anthropomorphic, as all Greek gods were or tended to become. They are, indeed, taller and more beautiful, wiser and more powerful, poor men, and are exempt from old age and death; but otherwise they are scarcely thought of as physically different. They are said to have houses on Olympus, either as actually dwelling upon the Thessalian mountain—and this is certainly the original meaning of the phrase—or, as in the Odyssey, inhabiting a kind of heaven which has nothing of Olympus but the name (r. 42 f.). They form a somewhat subordinate family-group under the government of Zeus, Olympian society being organized upon the same loosely paternal principles as society among Homeric men. They intervene constantly in human affairs, generally in human form, but sometimes in the semblance of birds. They are the sources of good and evil to men; although it is only some special skill or excellence that is regarded as the gift of a particular god, as skill in archery from Apollo or the healing from Asclepius; cf. Iliad 51, 61, 233). They are, theoretically, omnipotent and omniscient; or, at least, Zeus is so. They are subject to human passions and actuated by human motives. All this is quite in accordance with Greek religion in its classical form, although the wealth and vitality of detail in which the anthropomorphic aspect of the gods is realized are peculiarly Homeric. What is most important and characteristic in the religion of Homer is the clear perception of a fundamental distinction between the human and the divine. Whatever may have happened in the remote past, as when Ino was made immortal (r. 324 f.), in Homer's world no man is a god or can become a god. This is the poet's special contribution to Greek thought, historically considered, it is one of the most important ever made; for the conception of the Divine King was one that died hard in the Egyptian world (G. Murray, Zeus of the Greek Epic, 158 f.).

Andrew Lang makes a distinction between what he calls the ethical religion of Homer and his attitude toward mythology (World of Homer, 190). So far as they are religious beings, Homer's gods are very grand and imposing figures, worthy of all respect and reverence. They are usually just, kindly, and placable, although their goodwill is often purchased and their wrath appeased, merely, it seems, by sufficient sacrifice. They are bound by their oaths, which they make by the water of X. (O 32, 496). Their relation to Fate (Moira, Alas) is apparently not consistently stated, no doubt because it has not been clearly thought out. Sometimes the poet uses the language of fatalism (X 5; cf. 2 457 f.); but, speaking generally, Moira coincides with, or is, the will of the gods, more especially the will of Zeus. It is, in fact, in a quite literal way to speak of Zeus the 'God of the Gods' and the 'God of the World'—the division of the tribe which belongs to him. This conception of Moira invests Zeus with a very real moral grandeur when he subdues his own feelings, as when he allows his son Sarpedon to fall by the hand of Patroklos (11 431 ff.), and is moved by the
tragedy of the war (721). It is to Zeus that the poor woman at the milestone prays in the palace in Ithaca, when she calls down his thunder upon her oppressors (v. 115 f.). He is the protector of suppliants, and says to them, (631 f.), and beggars (67). He punishes those who give crooked judgments in the assembly and drive out Dike, the Right Way of things, disregarding the anger of the gods, when they are said to wander disguised over the earth observing the lawlessness and righteoussness of men (485 f.). ‘Evil the gods do not permit, nor those gods love not heartless actions’ (63). The helplessness of man, which is so much in the mind of Homer, makes him dependent upon divine aid; ‘All men feel the need of gods’ (658).

Such are the gods of Homer who think of them religiously. Even so, they are apt to be vengeful and capricious, while from another point of view they are decidedly unsympathetic, being lifted so far above human needs and weaknesses. But they do move us to a half-unwilling respect and awe. One can understand the phenomenon evolved by the great statue of Zeus at Olympia which was inspired by a famous passage in the Iliad; for, as Lang has remarked (op. cit. 117), the Olympians of Homer are the Olympians of Phidias. But, when the poet comes to deal with the gods of mythology, he adopts a very different tone. In his hands they cease to be moral. The charge of Xenophon, that Homer attributes to the gods all that is accounted a shame and a reproach among men—theft and adultery and deceiving of one another (fr. 151), the way a draughtsman in the rhapsody of the 'Lay of Demodokos' in 0, the Deceiving of Zeus in X; cf. the 'Battle of the Gods' in 388 ff.—an episode on the verge of burlesque. Yet perhaps the gods did not approve of their nature and tonic at the time it was made—is somewhat beside the mark. Homer is not preaching religion; he is trying to solve a very difficult artistic problem. He could not avoid the mythology of his subject, but the gods as actors in that mythology he could not respect. A naive faith can cast at what it holds most sacred, but the religion of which we have quoted some instances was anything rather than naive. Homer simply took the gods of mythology as he found them, much lower in the moral scale than the heroes, the parents and women, and treated them, as it were, decoratively (see Murray, op. cit. 280 f.). The truth is that Homer does not sympathize with, scarcely seems to understand, the old folk-religion of Greece which existed so long before and after him. Its leading deities, Dionysos and the Mother and Maid, Demeter and Persephone, he barely mentions; the various Mysteries, which were so important a feature in it, he does not mention at all. Neither do we find in Homer any certain reference to the belief in heroes in the technical sense of the term, ‘the divine race who are called half-gods,’ as Hesiod describes them (Theog. 185), whose innumerable results sufficiently prove how ancient and influential their worship was in Greece; for the lines describing the divine honours paid to Erechtheus in Athens occur in the Catalogue of the ships (B 544 ff.), and even there there are perhaps an Athenian interpolation. Herakles, the typical ‘hero’, is for Homer ‘the man Herakles’ (25).

One of the pleasant aspects of the gods who appear in the Iliad and Odyssey—and these the aspects which counted for most in the popular faith—are completely ignored. Homer will have nothing to do with the gods of the people, and makes light of the ‘sacred stories’ of which Greek literature is so full from Hesiod to Pausanias and Plutarch. Indeed, it is obvious that a religion like that which we find in the Homeric poems—a religion of which we are tempted to complain that it makes too much rather than too little of reason and sanity—involve the criticism and ultimate destruction of the simple faith which could accept the myths as a decent account of the happenings of the gods. That this is not due to the personal predilections of a single poet with an eclectic creed follows from the very nature of the Epos. Homer had to be true to tradition; he had to retell an old tale. The fact that the story involves the prominence of certain gods and beliefs and the exclusion of others is ground for concluding that the former must have been prominent and the latter absent at all periods in the life of the saga. Without Zeus and Apollo, for instance, there could be no Iliad; without Poseidon and Athena, no Odyssey. These, then, were in the saga from the beginning; that is to say, they were gods of the people whose beliefs were enshrined in it. If we apply this criterion to the Homeric poems, it leads to important historical conclusions. For it seems reasonable to hold that the divinities' sole action is most vivid in the organic structure of the poems were the 'Achaean gods, while those whom Homer dislikes or disregards were non-Achaeans. This conclusion is strengthened by a good deal of evidence from the history of Greek religion. We know now the general spirit and character of the old Cretan and Mycenaean religions—the worship of the Bull-god, the prevalent cult of the Earth-goddess, the careful tendance of the dead; and it is certain that, at a date which can only be conjecturally fixed, the ancient faith was overcast by Hellenic influence. Here, as in other cases, the spirit of the Epos is overcast by the worship of certain deities clearly of Northern origin, especially the Father-god Zeus. That this worship was introduced by the tribes who, in the times of the Mycenaean, pushed down from the North into Greece is the obvious and accepted hypothesis. The Homeric poems clearly reflect a period of Northern ('Achaean') predominance, which implies and includes the predominance of the Northern religion over the native 'Aegaean' worship of ghosts and goddesses. That the divinities of the Homeric pantheon are all gods of the invaders is not true; there has demonstrably been some fusion with, and affiliation to, certain divinities of the native peoples. But Homer does preserve more clearly than anything in the whole literature the memory of a religion more distinctly Northern in character than that of pre-Homeric or classical Greece, and with an observable bias in it against the indigenous agricultural and chthonian cults. This is the historical basis of his 'Olympianism', the root from which it has grown, although we must not assume that the flower represents the creed of any actual age or people. It grew out of popular religion, but, as it appears full-blow out in the Iliad and Odyssey, it is not itself popular religion. It is too selective for that, too systematic. 'It was Homer and Hesiod,' says Herodotus, 'who composed a 'theogony' for the Greeks, and who first gave the gods distinctive titles, and defined their forms and functions' (ii. 53). (For a description of the process by which the Olympian ideal was evolved by gradual differentiation from popular notions of divinity, see J. E. Harrison, Themis, ch. v. p. 446 ff.)

Of the Homeric gods, the most prominent in the Iliad are (besides Zeus) Apollo, Athena, Hera, Poseidon, and Aphrodite; in the Odyssey (besides Zeus), Athena, Poseidon, Helios, and Hermes.

(1) Zeus is the supreme god, the 'father of gods and men' (A 544), and, among men, in a special sense of kings, who often have the epithet 'Zeus-born.' He is clearly the deity of a people with patriarchal institutions, and exercises a kind of
patris potestas among the other Olympians. His authority is effective, although not unchallenged, especially by Hera, his wife, the ancient goddess of Argos, whose rebelliousness towards him may possibly reflect some earlier conflict between their worshippers. Whether Zeus was a specifically Athenian god from the first is not at all certain. There is evidence which indicates that he was worshipped at Dodona long before the coming of Achaeans there. But it is certain that he became the chief god of the people whom Homer calls Achaeans, and his characteristics in Homer are nearly all 'Northern.' Nor is his earliest home in the far north-west forgotten, for Achilles prays to him as 'Zeus the Lord, God of Dodona, Pelagian' (II 233). But normally he dwells upon Mount Olympus; he is, indeed, pre-eminently 'the Olympian.' (A 593, 583, 589). This also without doubt has its historical justification, taking us back to a time when his worshippers dwelt in North Thessaly, as tradition always maintained. Originally, then, 'the Olympian' meant 'he who dwells on Olympus' in Thessaly, although, as many mountains in Greece were named Olympus, and at least one famous seat of Zeus-worship was called Olympia, the epithet 'Olymp' gradually extended its connotation. Homer, indeed, speaks of the gods generally as 'the Olympians.' What is decisive is that this recalls by paroxysm on the summit of a mountain (e.g. O 3). He watches the fortunes of the war from Gargara, a peak of Mount Ida in the Troade, where he has a precinct and altar (O 47 f., e.g. X 171, P 276, D 306). This explains why Zeus seems all through the Iliad to favour the Trojans. He is the god of both sides, and the god of Ida is opposed to the god of Olympus, in Homer said himself in the upper air (II 412). This is natural in a divinity who is primarily a Sky-god, lord of the elements, above all of the thunderstorm, from which he derives many epithets (παρπάνεως, ἀνεμοφόρος, etc. of A 593, II 398). He is armed with the thunderbolt and theegis, and is himself a great war-god (οἰκονόμος, A 84). The Homeric Zeus is, in fact, an excellent illustration of the way in which certain primitive traits of a divinity may persist side by side with others which obviously belong to a totally different stage of religious thought. He never loses his original character of a Sky- and Thunder-god, but he is gradually modified into the Zeus of certain great passages already quoted.

(2) The same process has been at work in the case of Apollo; but it has gone much further, and eliminated almost every trace of his original nature. The probability is that he was, to begin with, a Sun-god; but no one could infer that from Homer. He was a war-god in Homer, a war-god, strong upon the side of the Trojans and Lydians. Apollo, as his cults testify and Homer well known (A 37 f.), was the great divinity of the Troade; and his favour towards the Lydians would also be explained if we could accept as proved Wilamowitz's hypothesis of his Lydian origin, and translate his epithet λυκερός (A 101) by Lydian-born. Outside Troy and the Troade, 'rocky Pnyx' is already sacred to him (I 406), and he has a consecrated grove at Iasinos in Thrace (c 930) and in Ithaca (c 278). But it is strange to find that one of the greatest of Greek gods in the estimation of Homer himself has so little connexion in the Epos with Greece proper. He is armed with the bow (A 45 f.—an archaic topos), since his highest epithet is 'the Par-Darter' (τυμπάνως, etc. A 14, 75, 385, 479, etc.). References to other aspects afterwands prominent in the Apolline religion are neither numerous nor important. But the ideal figure of Apollo in Homer, rising at times to sublimity, exercised an incaulable influence upon Greek art, and, through Greek art, upon modern notions of what is implied in Hellenism.

(3) Conjoined with Zeus and Apollo in the recurring formula of appeal to the gods (B 371, A 288, etc.) is Athena (Ἀθηνα). The association is evidently significant, for it reappears in the religion (see Harrison, Themis, 501 f.). Of all the gods, these are the three most highly honoured, Zeus, of course, in the highest degree (cf. O 540). Athena, in his daughter and favourite child, although reference is nowhere made to the legend of her birth from his head—not the kind of story likely to appeal to Homer. She carries the aegis, like his father the Thunder-god (B 447, B 728); and the explanation of this seems to be found in her development, as Pallas, from the palladion, two round shields she placed so as to touch at the rim and form the figure 8), which was regarded as a 'thunder-shield.' Hence she is a great war-goddess—indeed, the chief Achaeian divinity of war, and more than a match for Achilles. Her other name, 'Athena,' connects her with Attica. Whether Homer thought of her as a specially Athenian goddess is not clear from the poems themselves, although the epithet 'Athena' is evidence enough of her historical association with Athena. Another of her epithets, 'Gleukopis,' points in the same direction; for it means no more than 'grey-eyed' or 'bright-eyed,' it must be derived from γλυκός, and the owl, as every one remembers, was the sacred bird of the Athenian goddess. So with the title 'Bodipis' applied to Hera, the ancient Cow-goddess of Argos (A 551). But these traces of primitive religion are not consciously realized, or are deliberately suppressed, in Homer, who himself in the form of a woman 'fair and tall and skilled in gleaming crafts' (c 399)—wise, also, and mighty in war. It is the Athena of Thebeidas.

(4) The same idealizing tendency has been at work upon Poseidon; and it has been remarked that Apollo, Athena, and Poseidon, who are never made to appear mean or ridiculous like most of the other Olympians on occasion, were the chief deities of the Ionian race. Whatever inference may be drawn from that, the Poseidon of Homer is certainly an impressive creation, with something about him of the turbulence and splendour of the sea. For it is as god of the sea that he is consistently presented in both the Iliad and the Odyssey; although the Iliad seems not unaware of his function as the god of horses (B 307, 834). The epithet 'Earth-shaker' (ερετοτρευς, ερετος) does not help us, for it is at least as applicable to his power of making earthquakes as to his shaking the land with his waves; while the title πατρες is of uncertain meaning. For the most part the Homerian partisans of the Achaeans. But he is wroth with them for building a wall that is like to eclipse the glory of that built for Troy by Apollo and himself when they failed for Laomedon (II 448 ff.) and Zeus gives him permission to destroy the Greek fortifications after the war. To this there is doubtless some background of fact, and we become sure of it when the god rescues Ακελας from Achilles, that the descendants of the Trojan hero may reign in Troyland (T 306 ff.). The persecution of the Isacians by Poseidon, with this as a poetical motive in the blinding of Polyphemus, the uncouth son of the god. But it, too, perhaps rests on some ground of actuality, since the injunctions of Tiresias seem to point to the foundation of some known cult of Poseidon among a people ignorant of the sea (A 121 f.).

(5) Argo and Aphrodite are associated in both the Iliad (B 555 ff., 8 416) and the Odyssey (B 969 ff.). They are treated unsympathetically by Homer,
especially Ares. The explanation seems to be that both are ‘Thracian’ divinities, and the Homeric Thracians are enemies of the Achaeans. Ares at least is a Thracian in Homer (S 301, Θ 261) — Aphrodite was originally his wife; although in the fabliau-like Lay of Demodokos she is represented as the wife of Hephaisteus. On the other hand, theapotheosis of Ares by Homer (του Αρεως [A 288]) makes it likely that Aphrodite is called the daughter of Zeus and Dione (S 349, 370). She is named the ‘Cytherean’ (του Αρεως [A 256], [A 183]). She intercedes to save her son Aeneas from the hands of Diomedes (S 311 ff.) — a reminiscence, perhaps, in the tradition of her original nature as a war-goddess. Homer, however, regards her as simply the goddess of Love, peculiarly unfitted, in fact, for the strife of her brothers (του Αρεως [A 256]). She is, however, one aspect of the Homeric god who accords with the popular conception of him, namely that in which he is Psychopompos, Conductor of the Dead to the underworld; for in the cults Hermes has important chthonian functions (ος μη θανει; the passage, however, is late). His magic golden wand (του Αρεως [A 47]) belongs to him in this capacity. The epithet he bears (φιλόνεις, δάκτυλα, τεῦχος, ψυχομετέχως) are all unexplained. It is one of the distinctions between the ‘dead and the Odysseus of the music’ who forms the messenger of Zeus, while in the latter it is Hermes.

(7) Of the Olympians, Hephaisteus is most definitely connected with a special locality—Lemnos (A 583, Θ 285 ff.). As Fire-god he appears sometimes to be almost identified with the element he controls (e.g. Φ 245 ff.). His skill as a craftsman is much celebrated (A 608, Θ 196, etc., Σ 478 ff.) but for the most part he is treated in a vein of gentle, charmed occultism.

(8) Idilto (m 278 ff.) is even more elemental in his being, simply the personified Sun, one of the ancient Nature-gods dwelling in the background of Homeric religion. This background also belong not only Dionysos and Demeter with certain minor divinities such as Aiolos, Kirke, Proteus, Lenokos, but the great company of nymphs, river-gods, and the like, who have in all ages been very real to the imagination of the Greek people (see J. C. Lawson, Modern Greek Buddhism, etc., Cambridge, 1910, p. 150 ff.). The essential nature of Dionysos and Demeter as spirits of the changing seasons prevented their becoming Olympians, for, these do not suffer age or death, whereas the central fact in the ritual of Dionysos and Demeter was a drama of the death and re-birth of the god.

2. The world of the dead.—The Homeric conception of the soul and its destiny differs as much from that which seems to have been at all times current in Greece as his Olympians differ from the gods of the people. Yet it is a logical accompaniment, either as cause or effect, of the Homeric practice of cremation, and it can be paralleled from history. In Homer the dead man is habitually burned, and a mound heaped over his ashes. Only in this case can his soul (μοῦροι) be set free to enter the realm of Hades. The case of the unburned and unburied is excluded by the dead already there (του Θεος 71 ff.). It is impossible for a race which burns its dead, customary at Paphos (του Θεος 363). This recalls her undoubted kinship with the Oriental Love-goddess whom the Greeks called Astarte (φιλαρατους) for Cyprus early received a large Semitic element in its population. She is also named the ‘Cytherean’ (του Θεος 363, του Θεος 183). She intercedes to save her son Aeneas from the hands of Diomedes (S 311 ff.) — a reminiscence, perhaps, in the tradition of her original nature as a war-goddess. Homer, however, regards her as simply the goddess of Love, peculiarly unfitted, in fact, for the strife of her brothers (του Θεος 256). She is, however, one aspect of the Homeric god who accords with the popular conception of him, namely that in which he is Psychopompos, Conductor of the Dead to the underworld; for in the cults Hermes has important chthonian functions (ος μη θανει; the passage, however, is late). His magic golden wand (του Θεος 47) belongs to him in this capacity. The epithet he bears (φιλόνεις, δάκτυλα, τεῦχος, ψυχομετέχως) are all unexplained. It is one of the distinctions between the ‘dead and the Odysseus of the music’ who forms the messenger of Zeus, while in the latter it is Hermes.

(7) Of the Olympians, Hephaisteus is most definitely connected with a special locality—Lemnos (A 583, Θ 285 ff.). As Fire-god he appears sometimes to be almost identified with the element he controls (e.g. Φ 245 ff.). His skill as a craftsman is much celebrated (A 608, Θ 196, etc., Σ 478 ff.) but for the most part he is treated in a vein of gentle, charmed occultism.

(8) Idilto (m 278 ff.) is even more elemental in his being, simply the personified Sun, one of the ancient Nature-gods dwelling in the background of Homeric religion. This background also belong not only Dionysos and Demeter with certain minor divinities such as Aiolos, Kirke, Proteus, Lenokos, but the great company of nymphs, river-gods, and the like, who have in all ages been very real to the imagination of the Greek people (see J. C. Lawson, Modern Greek Buddhism, etc., Cambridge, 1910, p. 150 ff.). The essential nature of Dionysos and Demeter as spirits of the changing seasons prevented their becoming Olympians, for, these do not suffer age or death, whereas the central fact in the ritual of Dionysos and Demeter was a drama of the death and re-birth of the god.
vales from an age of embalming and inhumation (e.g. use of ἀναψηκτὶς [I 413, s 65]). The exact weight to be attached to these indications is not easy to judge. They may qualify a little, but they do not alter the fact that in Homer the dead are always burned, and that their souls exist in separation from their bodies in a world reached at the verge of Oceanus in the extreme West; whereas the normal Greek practice was to inhume the dead, and the normal Greek belief was that the soul after death somehow maintained its connection with the body, and that the realm of Hades was under the earth—as at least one passage in the Iliad intimates (I 410)—to be reached by certain known caverns or clefts in the ground. The contradiction is radical. Ghost-worship, hero-worship—the whole of that chthonian religion which meant so much to the Greeks of history—are steadily ignored in Homer; Hades and Persephone are mere names.

3. Ritual and priests.—The gods are approached by men with prayer and burnt-offering. The two things naturally go together; and, when prayer is made to a god without sacrifice, it usually contains a reminder of sacrifices offered on previous occasions (cf. A 40). That is because the attitude of the worshipper is not unfairly expressed as δοῦναι. For the same reason a prayer usually includes a vow to make an offering to the god, if the request be granted. Doubtless there is in Homer some lingering feeling that the sacrifice is more than a mere business transaction, that the god of one's own tribe will be more disposed to accept it that an alien deity, perhaps even that the relation thus established between worshipped and worshipper has a certain mystical force. But he does not think of sacrifice as a sacrament. The ritual is elaborately described for us, most fully in the third book of the Odyssey, when Nestor sacrifices an ox (A 785, γ 9), a white male lamb to Halios (I 103), and so on. This victim was to be unblemished, and the sacrificer must be ceremonially clean. Sacrifice offered in confirmation of an oath is exceptional in admitting a mimetic or at least symbolical element: 'whichever side breaks the oath first, may their brains be split on the ground like this wine' (I 300); and the flesh of the victim was not eaten (s 110). Since we have to do in Homer with burnt sacrifices all the time, the altar on which the victim is laid is the most important thing. The altar he speaks of are the high hēmōi. The low σκαρών, which served as altar in hero-worship, melts in the Iliad of Homer, and in the Aeneid (A 173, γ 153). Temples are rarely mentioned, and then in passages whose evidential value is questioned (see Cauer, Grundzüge der 8. Lief, Leipzig, 1908, p. 297 f.). There are certainly many reminiscences of a time when temples did not as yet exist, and the altar of the god stood in the open air, in a grove or sacred enclosure (τεμεῖον, or by running water (I 506, I 404, γ 291, etc.). Only one statue is mentioned—that of Athena in her temple at Troy, which must have represented the goddess as seated (cf. I 303), although the earliest images of the gods were standing. As to priests, they are always attached to some special sacred place and the service of some special divinity. There is no priestly caste in Homer as in later Greece. Sometimes we meet with a priest of a very primitive type, like Maron who 'dwelt in the grove of Apollo' (I 390), like Ogyges, who is called an ἄρχοντας, or cursing-man (A 11), like the Seilis of Dodona, who had unwatched feet and slept on the ground (I 238). These last were perhaps prophets rather than priests; and priests, as we must expect in every saga, play a considerable part in both the Iliad and the Odyssey, especially Kalchas in the former and Teiresias in the latter. The κληρονομεύον had the gift of second sight (I 381 f.).

There were also priests to consult. Homer mentions two: that of Zeus at Dodona (E 327), and that of Apollo at Pytho (Delphi [I 80]). We hear a great deal of omens, drawn mainly from signs of the weather and the flight of birds, and also from such things as a chance word (φωνή, ἀκρογύμνος [E 35, γ 117]) or a sneeze (s 541). There is no instance, however, and this can hardly be accidental—of any suggestion of contact with the Behistun inscription or of the behaviour of the sacrifice as the fire consumed it. On the other hand, a dream comes from Zeus (A 65) and we hear of an interpreter of dreams (E 149), which may be false or true (s 662 f.). Of magic, except in the fairyland of Odysseus' wanderings, where incredible things may allowly happen, there is no mention (see, however, E 645, γ 457). Curses were addressed to Hades, Persephone, and the Erinyes (I 454, 669); to make them hear, the mother of Mnesiloe beat with her hands upon the earth.

II. ETHICS.—The morality of Homer has an appearance of even greater uniformity and consistency than his religion. It is, to a large extent, characteristic of a feudal society. The cardinal virtue is, no doubt, Courage. Next to Courage comes Wisdom, the capacity for thought and speech. The praise of Achilles and Ajax among the Achaeans is that they are the first of the Danai in council and in battle (A 258); and again Achilles was taught to be 'a speaker of words and a doer of deeds' (I 433). But it is in Odyssey that both virtues are most justly combined; and that example helps us to remember—what no Greek was likely to forget—that the mere possession of wisdom was not enough without the eloquence necessary to recommend it.

Besides these special qualities, and, as it were, beneath them, we have to take account of a more comprehensive feeling, which, although scarcely conscious enough of itself to be in the full sense ethical, is the basis of nearly all the moral teachings in Homer. The classical Greek writers spoke of it as a feeling for the exact 'limit' or 'measure' to be observed in the quality of a man's actions. But in Homer it is still in what may be called its instinctive stage, and one detects behind it a greater reinforcement of emotion than goes with the Aristotelian doctrine of the Mean. It has both a positive and a negative side. It is first of all a positive, and not a negative, sentiment. It takes the form of a protest against excess. The positive emotion is called by Homer 'Acharis,' which is a Hebrew word which does not mean that one should not avoid the excess. The emotion stirred in us by the lack of Aids in the Odyssey he calls 'Nemesis.' Thus Nemesis comes to be, as it were, the sanction of Aids. But the good man means 'Acharis' not as a sentiment of great application. He need not fear the condemnation of gods or men. Then there enters something like the sentiment of chivalry. Achilles would not despise the dead man, but felt the emotion of his armour (E 417 f.). Chieftains must not be laggards in the fight like a mean man (I 114 f.); noblesse oblige. But Aids and Nemesis together include more than the medieval ideal, although they have not all its heroic quality. They are applicable to pretty nearly all the relations in which human beings can stand to one another, but not in history. Homer often forms the standing moral problem in a society in dissolution or frankly based upon physical force—the relation of the stronger to the weaker. Aids and Nemesis are not presented as a relation of Aids and the object of Nemesis. In practice, the limit is roughly defined by what is usual—cust m
("Diktē"); to what time has brought the moral authorizations, and thus to the Right Way, we may generally substitute "Themis," which is specialized to a slightly more ethical sense. It is the nearest word in the Greek that is translated by Law, but it is often a mere abstract noun, or else, as its roots lie in mere ancient use and wont; the plural themistai means pronouncements of what is customary, and therefore right and just, in particular cases. In this way a body of precedents may arise, capable in time of being systematized into a legal code. But in Homer we have not yet reached that stage. Even if we point to the "law" theme in room at a diversity of private opinion—that judgment is best which obtains the applause of the assembled tribesmen (2 508 f.). Here public opinion counts for something. It is only in an ordered society that public opinion can be brought to bear effectively upon individual conduct. Now, Homeric society is not highly organized; and so in its Aídes and Nomeis have a supreme value and importance, because, in the absence of an effective administration of justice, it is to them alone in the last resort that the helpless can appeal with any hope of success. The entire defenseless in this society consist of the dead, the aged, strangers, and suppliants, every one, in fact, who cannot assert his rights by force and has no one to assert them for him. Such people are áktai; Aídes, due to them, even belong to them, almost like an attribute. If a man was aídes in dealing with them, he was a dangerous man, endowed with some baneful power over his life even in their own death. Homer expresses this by placing them in the center of the gods (Hecuba 556, Λ 733), and often speaks of Zeus as the protector and avenger of the stranger and suppliant. But that is only a more theological view, not a law theme. Room at the helpless are charged with a quality which contains itself some mystic power of punishing its violation. And not only the helpless have this quality, but kings and even, to some extent, old men, the former because of the divinity that hedges them and in primitive communities (not, of course, in Homeric society) guards them by a tabu, the latter because of the sanctity attaching to the male heads of families in a patrilineal tribe. Hence, in Homer, kings and old men are áktai, the latter for 2 532 (Acts 2:23), we may even find nearly the whole of Homeric morality: truthfulness, for instance, and the faithful keeping of a pledge or oath (oikia).

This morality at its best is singularly pure and noble, humane and at times even tender, in spite of the atmosphere of passion and struggle in which the poems are involved. This may easily be illustrated by quotations, from the ringing "T Hateful to me as the gates of Death is the man who hides one thing in his heart and says another of Achilles (2 581) to the words of Odysseus toward the end of the Odyssey: "It is an unholy thing to boast over the slain" (v. 415). But individual quotations scarcely show it as well as the general tone of both epics. Nay, the mere working out of their plots reveals a profound ethical sense. No one can follow the tragedy of Achilles to its conclusion in the last book of the Iliad without an enrichment of moral experience; and, when in the Odyssey the suitors at last meet their doom, we feel that this is more than poetic justice: it is a kind of thodiktē.

The morality of Homer, however, does not everywhere reach this high level. The declensions are rare, but their very rarity makes them instructive. They may be explained in two ways: as justified by the circumstances under which they occur, or as survivals of an earlier stage in the growth of the Iliad and Odyssey, these being regarded on this hypothesis as traditional poems. If, for example, we take the treatment of the beast side with the thrilling humanity of the sentiment that it is an unholy thing to boast over the fallen, and with the implied condemnation of the mutilation of Hector’s body, instead of both kinds of brutality (1 164 f., N 202 f., P 120 f., Σ 177; boasting over the dead—N 374 f., 414 f., 445 f., etc.). These things, it may be said, are done in hot blood; in his normal moments no warrior would be guilty of them. Perhaps it is because there was a certain deliberateness in the actions that Achilles’ treatment of Hector’s body (X 266, X 264) and the sacrifice of twelve Trojan youths on the pyre of Patroclus (v. 176) offend the poet. There is only one case of torture in Homer (X 474 ff.), which would be justifiable, if torture were ever justifiable. But it is certain that Homer dislikes and makes as little as possible of these inhumanities of warfare; and, if we do find them here and there, it is because they were inherent in the tradition; for they are not romantic horrors invented by the poet, but relics of barbarism, the battle-customs of the Achaeans. It has, in fact, been argued that the Homeric poems contain traces of actual exurgation.

But exurgation (it is pointed out) is not always successful: witness the instances given of mutilation and cruelty. At the same time it should not be forgotten that Homer is describing a society disorganized by war and recent conquest—the kind of society in which strangers were asked whether they were merchants or pirates (Od. 3:50, 222 f.; v. 1745; cf. Thuc. I 5). In times like those the morality even of good men is put to a searching test, and the surprises comes to be that the Homeric state is so high. Moreover, it is what is best in the ethics of Homer that is most characteristic; for, as we have seen, its defects are largely traditional or conventional. It is the same with what may be called the domestic morality of the poems. There is a wonderful tenderness in the relations of Hektor to Andromache, of Odysseus to Penelope, of Achilles to Thetis, of Akhilleus to Aítes and Nausikaa. One must, of course, allow a little for deliberate idealization, but the nature of the ideal helps us to understand the atmosphere of the normal Homeric household. Sometimes we catch sight of uglier possibilities. Helen and Paris are scarcely a happy pair. There is the extremely painful and pathetic story of Pándaros related in the ninth book of the Iliad (447 ff.). Klytaimnéstra figures prominently in the background of the Odyssey. Yet here again it is the more favourable picture that gives the truer view. The Odyssey might almost be called a celebration of the domestic virtues.

In essentials, Homeric morality is that of the great period of Athenian history, although there are things in Homer which shocked the moral sense, of philosophers at least, in Ionia and Athena, just as, on the other hand, there were certain
HONESTY—HONEY

practices tolerated by public opinion in Classical Greece with which Homer will have nothing to do. It must be admitted that he has no moral philosophy, in the same way and for the same reason that he has no philosophy of religion. One has but to think of Achilles or even Findar to realize how unphilosophic he is. But that was inevitable. Apart from the fact that a poet is not a moralist, a poem like the Iliad must reflect the national point of view—-at any rate the point of view of a dominant class in the nation—and not that of the individual artist. Hence the morality of the Homeric poems is popular morality, raised to a new power in virtue of the new splendour of expression given to it. For this reason they were for centuries regarded, in spite of an occasional protest like that of Plato, as a kind of handbook of ethics; as such they were taught in schools. It is impossible to exaggerate the positive influence of Homeric morals and morals in the ancient world and upon modern ideas concerning paganism. They, in fact, constitute a great deal of what has hitherto been understood by that elusive word.

LITERATURE.—Since the religion and ethics of Homer form an important chapter in the history of Greek religion and morality as well as one of the central problems of the 'Homeric Question,' the discussion has been very large. Of the older works, C. F. Niggelbach, Homerische Theologie, Nuremberg, 1861; E. Buchholz, Die homerischen Ilias, Leipzig, 1877-85 (ii. 'Die homerische Göttlichkeit', etc.); and W. R. Gladstone's From Homer to the Latin Poets on Homer have collected the best. One may now see T. D. Seymour's A Commentary on Homer, New York, 1907, in its relevant cha. and H. Grupe's Homer, Mythik, u. Religionsgeschichte, (in German, 1889; English, Albertina, Munich, 1898). The evidence is discussed in C. L. Farnell, Cults of the Greek States, Oxford, 1904; in J. A. Hartt, Proceedings of the Study of Greek Religion, Chemnitz, 1903; and Thamis, d. Mycenaean, Athens, 1903. In addition, K. Hahn, 1907; in Gilbert Murray, Rites of the Great Epic, Oxford, 1913; and Four Stages of Greek Religion, London, 1913, ch. ii.; and in Andrew Lang, World of the Homeric, London, 1894.

The articles in Boeckh and Pauly-Wissowa may also be consulted. Of the historians of Greece, perhaps Er. Meyer has treated the subject most suggestively in his Gesch. der Alterthümer, ii. Stuttgart, 1903, p. 77 f

J. A. K. THOMSON.

HOMICIDE.—See CRIMES AND PUNISHMENTS.

HOMILETICS.—See PREACHING.

HOMOIOUSIA, HOMOIOUSIA.—See ARIANISM.

HONESTY.—Honesty, or the quality of being honest, is a virtue which belongs to the ethical code of justice. In Homer, it is often approximated in meaning to honour (g.) as the original homon is the character or repute attaching to the holder of an honor, or position of dignity, so honesty may be defined as coming from honour without being the mere possession of an honor come from effect, when the latter is used in its objective sense as the respect in which the individual is held by society. If we trace the usage of the word in English literature, we find that it has various shades of meaning, including chastity, or virtue in the limited sense (cf. the famous passage in Shakespeare, Hamlet, III. i. 107, and also As You Like It, III. iii. 30), generosity, uprightness, truthfulness, and fidelity in one's relationships with others. Inasmuch as the virtue of honesty involves regard both for moral rights and for rights of property, it may equally well be classified under benevolence and under justice; for Aristotle's definition of justice as the practice of entire towards one's neighbour (Eth. Nic. v. 13) is in modern ethics widened out by the concept of benevolence (g.), which is the principle of seeking the good of the individual as such and not merely as a member of the same politis, or community (cf. J. H. Muirhead's classification of the forms of good in Elements of Ethics, London, 1910). Breaches of the law of justice or benevolence, when these take the form of dishonesty, untruthfulness, or covetousness, are

commonly judged bad on the ground of the harm that they inflict on others. The essence of honesty as an ethical virtue consists in conduct based on a conviction that the interest of our neighbours is identical with our own. The Christian conception of 'the Kingdom of heaven' in its social aspect implies conduct in which the well-being of others is not distinguished from one's own well-being. Hence, in comparing the utilitarian formula, 'every one should count for one and no one for more than one,' with Kant's categorical imperative, T. H. Green (Proleg. to Ethics, Oxford, 1886, p. 259.), pronounces the latter superior as the rule on which the merely just or honestly man acts. Whether the summa bonum be defined as self-realization or 'the Kingdom of heaven' in the Christian scheme of life, humanity in the person of every one is always to be treated as an end and never merely as a means. 'Every one has a summa which every one else is bound to render him' (ib. 251).

Cicero (de Officiis, iii. xxi. 83) identifies honestum (the Latin form of ἀρετή) with virtus, after the manner of the Stoic ethics (cf. honestate dirigenda utilizes est, et quidem si ut basi dabo verbor inus, sicut discipulum, ut unum sonum sonaret uritur—a dogma of ancient philosophy which is perpetuated in the maxim 'honesty is the best policy'). The identification of honesty with expediency belongs to an obsolete view of society.

'It is to the duties of justice and Benevolence taken together that we should refer these virtues: the former, in organizing social institutions and particularly to the State; the duty of Honesty, which means respect for the existing order and respect for property so long as they are not capable of immediate improvement by the individual's own action (R. Blackall, Theory of Good and Evil, Oxford, 1807, ii. 279).

The scrupulous regard for the rights and possessions of others which honesty is commonly held to imply is capable of extension in various directions. There is, for example, the duty of being honest in one's contracting (or trading with) nothing which is not what it professes to be. J. S. Mackenzie (Manual of Ethics, London, 1899, p. 262) refers to Ruskin's teaching on modes of artistic expression (see ch. 'The Lamp of Truth,' in the Seven Lamps of Architecture) and also to the knowledge of the 'crafter.' An honest day's work means no shirking, just as an honest piece of cloth means just length or breadth (see quotation from Bishop, Woolley Manuf., 1863, ii. 96, in OED, s.v. 'Honesty'). There is also the duty of being honest with oneself. A man's respect for himself as a moral being is a fundamental element of failure or defect. Many problems of casuistry arise out of the suppressa veri or suggestio falsi adopted, e.g., by a legal advocate engaged in the attempt to save the guilty (see H. Sidgwick, Methods of Ethics, London, 1901, on 'Versatility'); or, again, out of the practice of subscribing to a formula or creed the terms of which can no longer be interpreted in their original sense; or out of the failure of individual members of a trade union to keep the obligation entered into by their leaders. Such cases are, in general, to be determined by the consideration of the effects of our action on the moral world of which we are members (cf. Mackenzie, op. cit., on 'The Commandments,' ex. with quotations in the footnote, p. 206). The honest life, which includes honesty of speech and deed and motive, is not to be regulated by any outward code of duties; for, if in either the state is in effect a moral vacuum, and individuals are free to act as they please (see C. H. Smith, Theorie des Moralischen, German, 1902).

LITERATURE.—See authorities mentioned under art. Honors.

HONEY.—1. Honey was highly esteemed among the ancients, both as a food and as an object of the inherent properties which it was supposed to pos-
HONEY

When the honey has been ladled out with mops from the hollow tree in which the bees are usually situated, it is spread with water in wooden troughs, and sometimes left to ferment. In a children's game imitating the taking of honey, the plucking hands are removed one by one from the hives; if girls are playing, their arms are supposed to be bopped at the elbow, as women are allowed to take honey from the lower limbs of the trees where the drippings are. (N. W. Thomas, The History of Africa, London, 1816, pp. 125, 135). Honey is also obtained by digging out the nests of the honey ant (Serpico-Gilian, Journal of the Royal African Society, London, 1912, l. 125), or from flowers by smoking or shaking.

Honey-beer or honey-wine is commonly drunk by most of the tribes of South and East Africa. In Nigeria, honey and milk is a favourite drink (A. J. N. Tremearne, 'Notes on the Kagero and other Nigerian Head-Hunters,' JRAI iii. [1891] 177).

The honey of the wild bee is very popular in the Batanga for purposes of divination in magical rites. It is obtained by digging out the nests, which are usually found in the earth. Although some may eat the honey, the nectar can be found only by members of certain tribes (J. A. J. M. Champion, 'The Atharara,' JRAI xii. 51).

The Anya's of Central Africa, whose only bread is a roll called matiba made of maize-dour, bananas, and honey, use honey from the nests of wild bees, found in hollow trees, but the river people hang cylindrical boxes on the trees in which the bees build. The cylindrical bee-box is a hive for wild bees among most East African peoples. Rights of property in these boxes are recognized. Among the Atharara, who cultivate honey in barrels similar to those in use among the Akamba, ownership is established by brands consisting of elaborate arrangements of dots and strokes. Honey is taken by smoking out the bees, and is eaten or, more frequently, used for making beer (A. M. Champion, 'The Atharara,' JRAI xii. 51).

Both the Akkuyu and the Akamba regard the theft of honey as a serious offence. They hold that honey is a natural product of the land, and enforce strictly the equitable distribution of a dead man's property, of which honey forms an important part. After the death of a father, none of the sons may go into the woods to take honey from the father's hives until the paternal uncle has done so. Any who break the law become unclean, and can take honey only when the paternal uncle has provided a sheep to be sacrificed, after due observance of a ritual, by one of the elders.

It has been suggested that the custom has been devised to prevent appropriation of the honey below the estate the property of the dead, a practice that has been regularly divided up (G. W. Holley, Further Researches into Selima and Kaiman Religious Rites and Customs, JRAI xii. [1911] 42).

The Okuyan Vedas of Ceylon recognized the rights of a family group to collect honey over certain lands from which other families were barred. With them, honey was used not only as a staple of diet, but also as the chief article of barter. The importance attached to it is indicated by the elaborate ceremonial preceding the honey-getting to propitiate the spirit and secure a good crop. It is recorded that in olden days, a honey bee's nest was frequently found in the rock shelter. The nests are usually found in clefts in the cliffs, and the honey is taken by men who swing down by ladders. Boys are systematically taught to collect honey (C. G. and B. Z. Seligmann, The Veddas, Cambridge, 1911, pp. 62, 91, 255 ff., 326 ff.).

Honey is also used as an article of barter among the Baka of South Africa, honey-wine being part of the price for which a stranger may hire him, the collector of the meat is eaten by the fighting men of the tribe, while the elders drink the wine (M. W. G. Beach, The Bush, Cambridge, 1911, p. 47). The Baka youth agree to sell the meat to the elders by sending a pot of honey to the parents of his future bride (J. R. L. Macdonald, 'Tribe met with during the John Expedition of 1907-09,' JAF xxvi. [1906] 223).

The custom of reserving the honey-wine for the elders also obtains among the Atkuyun, except at certain festivals, and the Masaai. At the Masaai circumcision ceremonies, the honey-beer, which forms an important part of the feast, may be drunk only.
HONY

Among the gypsies in Serbia, in the course of the ceremonies which take place several days preceding the wedding, the gypsy bride is adorned with honey, and the bridegroom smears the bride's shoes with yellow ochre, and the next day he takes her to the house of her father, where she then leaves her father's house, and is driven to that of her father-in-law in a cart. On her arrival, she is handed to her by her mother-in-law, who easterners the cats from the stove and smear the honey on the belly of the cats.

In Croatia and Turkey a cup of honey is handed to the bride at the door. The Poles ornament the bride's lips with honey. At Vishak hindus the bride is given honey and butter with which to anoint the door. It is also the custom among the Balkan peoples mentioned above for the bride and bridegroom to eat together, in the evening, a cake baked some days before, which is dipped in honey as it is eaten (R. O. Winstedt, 'Forms and Ceremonies,' Jour. Gypsy Soc., 4 [1898] 262 f.). Among the Balkonges, however, who regard honey as a 'mysterious thing,' a man visiting the relatives of his betrothed must avoid honey, and it must not be eaten in the presence of the bride in the first year of married life; if she perceived that her husband had eaten honey, she would return to her parents 'as honey flows' (Dunod, op. cit. p. 220).

Among the Argives a cake made with honey was sent from the bride to the bridegroom (Athensm. xiv. 445). In Modena the bridegroom walks around the altar through the incense flames while the guests pull them with sweetmeats, and among the peasants honey is smeared on the listers of the cows, the position of a cow in the herd was determined by the cows. Among the Hindus, who use it to wash their household gods.

7. An explanation of the power of honey as a protection against evil spirits may be sought in its use in connection with religious ritual. Reference has been made to the belief in its purity. By this quality it was peculiarly fitted to be food of the gods and of divine origin; the gods carry it to the bees (cf., further, Macdonell, Ved. Myth. p. 49 f. [GIAP. i. a. (1897)]; Hillebrandt, Ved. Myth., Beine, 1913–1915, i. 238–341). It is held to be the food of the gods and of divine origin by the Hindus; and, when they take the honey from the hive, they hold in their hand a plant (Ursinus nigricans) sacred to Vishnu, Vishnu, it will be remembered, was represented as a bee on a lotus leaf, while Krāpa has a blue bee on his forehead. Honey-mixture was employed in greeting a king, Brahman, or other guest of honour (Manu, ill. 119 f.; Hillebrandt, Rū.-Lit. p. 79 [GIAP III. ii. (1897)]), and it is also employed in the Vaiṣṇava sacrifice. A gala of the Brahmans, v. l. i. 8 f. [KALYPSO. xiv. 5, iv. 15–18; cf. on this Hillebrandt, 141–143). It is one of the substances given a new-born child in the Ayurveda rite and at its first feeding with solid food at the age of six months, as well as, according to Kasthika Sūtra, xiii. 1, at the first meal eaten in a new home; and it is also enjoined as part of the sacrificial food at the Aṣṭaḍukṣaḥ in honour of the manes (Hillebrandt, 45, 46, 92, 95; see also Hillebrandt, Ved. Myth. i. 238–344). In Finnish mythology the bee is employed to fly over the moon and sun into the use of the creator and to carry health and honey to the good (de Gubernatis, Zool. Mythology, London, 1872, ii. 218). In Norse mythology honey was the third thing... as it was a dessert in the divine drink (Grimm, Teut. Myth., tr. Stallybrass, London, 1882–96, ii. 691 f.), as was never among the Greeks. In the Edda a divine hall of the gods (Ygg) was

6. Honey was regarded by the ancients as a substance of great purity, not unnaturally, in view of the supernatural origin and powers attributed to bees in primitive belief. Milk and honey in the early Christian Church was held to suggest consecration, while a portion of milk and honey was placed in the mouth of the newly-baptised, in allusion to the name of honey, in Greece given to Canaan (Augusti, Christl. Archiv., Leipzig, 1836, ii. 448; cf. also Drews, PROB. xii. 1805) 704). On the other hand, in some of the instances cited, honey was administered at critical seasons, namely, at initiation, and to children soon after their birth, which might be expected to be specially potent. Honey and sweet things were believed to drive evil spirits away. In the ceremonies following birth among the Hindus of the Panjab, sweetmeats play an important part, and at one stage are passed around the head of the child for the staved purposes of driving away evil spirits (H. A. Rose, 'Hindu Birth Observances in the Panjab,' JRAI xxvii. 221). Marriage is another occasion on which the innocence of malignant powers is specially to be feared, and we may attribute the use of honey in marriage ceremonies to its power over spirits, even though another explanation of the custom be offered by the people themselves—namely that it will secure harmony in married life. Among the Deccan Hindus, when the bridegroom comes to the bride's house, honey and curds are given to him to dip in. In Beotia, the gypsy bride has certain parts of her body anointed with honey. The gypsies and other peoples of the Balkan Peninsula follow the same custom.
while the Vedas invoke the yaksas (the female spirits who form one of the chief elements in their religious beliefs) in the ceremony which precedes the marriage, the honey of the bee-queen is sprinkled on the heads of the guests with the bees, because they live at the top of high rocks, and some of the honey is poured on the rocks for them when the nectar is taken—an ancient custom. The act of drinking the honey is a drawing of honey ('Bellegam, pp. 182, 292, 291).

Honey thus forms a peculiarly appropriate offering to the gods. It was, however, forbidden to the Jews to offer it on the altar (Lev 25). Maimonides says (J. Townley, See the Reasons of the Laws of Moses: from the More Novochsin of Maimonides, London, 1857, pp. 252) that the heathen nations around offered honey to their gods; according to another suggestion, it was prohibited because it fermented and gave off an unpleasant smell when burnt (Aben Ezra), which was incompatible with a 'fire of sweet savour.' Firstfruits and honey, however, were offered for the support of the high priest (Ex 29:11). A papyrus fragment found at Oxyrhynchus, dating from the 2nd cent. A.D., contains a bill for, among other things, '18 cakes, oil, honey, milk, and every spice except frankincense,' supplied to the Strategus of the nome for 'the sacrifice of the most sacred Nile.'

The offering of a honey cake is of frequent occurrence in Greek ritual, especially in connection with the cults of Dionysus, for which honeycakes were regarded as the souls of the dead (Gruppe, Gr. Mythol. and Religionssch., Munich, 1906, p. 590). Honey was also used in rain-charms (ib. 501, 810).

Athenaeus (xiv. 464) mentions cakes offered to Artemis when the moon was waxing and the moon waning. The honey cakes are made of honey in their composition; it may be recalled that a priestess of Artemis and Demeter was known as Helemis. At Lebade, at the shrine of Trophonius, the suppliants went with an offering of a honey cake in each hand for the prophetic sake. A honey cake was put in a hole for the goddess (as when a certain medicinal herb was gathered in Attica. Cakes of honey were also put before the statue of the sun god in the temenos of Zeus Olympus at Athens every year (L. E. Furtwängler, Oecus III. Oxford, 1907) 10 C.). Scepter at Olympia had, like Trophonius and Brocolitheus, the mask's service of the honey cake (see Passavant, vi. xx, 8, 9). The cakes offered to the serpent, thought of the serpent, thought of the god. Scepter is apparently the fertility spirit (J. R. Harrison, Thes. Camb., 1913, p. 503), but the snake is usually associated with the chthonian aspect of Greek belief; and the other chthonian deities involved, though connected with fertility, were prominent in their connection with the underworld.

2. Honey was included in the offerings to the dead. The sweet beer of the Egyptians is mentioned in the Liturgy of Funerary Offerings as well as various kinds of sweetmeats. In view of the fact that the offerer intended the food for the dead (g.e.), it would be unsafe to lay too much stress upon this custom as evidence for a peculiar connexion of honey with the spirits. There are, however, several customs followed in parts of Africa which suggest a course of development in which an offering, of which honey forms a part, becomes a protection. In Abyssinia, honey-beer is drunk before a solemn conference. Among the Suk, before drinking a fresh brew of honeywine, the elder entrusted with the wine-jar fills a cup and pours the wine out on each side of the door, invoking the spirits of the dead to keep them in safety. The elders of the Kilcynn of East Africa, at a burial, pour some honey and cooked fowl into a pot and comments in a valuable discussion in, 'We give you this to drink' (Hobley, J.R.A.I. xii. 410). Further, in the ceremony of the coronation by white corn of the chieftains, the elders, or rather the members of the special class of elders competent to perform the ceremony, pour fat, milk, honey-beer, etc., into a hole in the ground, and in various other ceremonies, in the course of which it appears that this is an offering to the spirit of the departed, but in the underlying ideas of propitiation and protection closely approximate. The identification of the two aspects appears to be complete in the hymn, folk-stories of the Eskim of North America, in which it frequently happens that the living who have penetrated to the land of ghosts are pursued on their return, and save themselves from further pursuits by spreading food across the road. In their town (P. A. Talbot, In the Shadow of the Bush, London, 1912, p. 36).

Literature.—See references given in the article. For beliefs and practices connected with honey, especially in India, see J. M. Campbell, Notes on the Spiritus Beli and Custom, in J.R.A.I. (1908) 250. References for the use of honey in Ancient Palestine will be found in B.B. and in McKnight-Stone's Cyclopedia of Bible Literature, iv. 412. E. N. Fallaize.

HONOUR.—1. Ethics.—Honour is high regard or esteem, whether felt, given, or received. It implies, like honesty (g.e.), a sense of duty or right, and fidelity to one's obligations; like honesty, it is used from Gower onwards (see OED, s. v.) of chastity or purity; and, finally, it takes on a concrete, objective meaning as equivalent to exalted rank or position (or in plur. of marks of regard, distinctions, decorations, and the like). The word has passed into colloquial speech in such phrases as 'on one's honour,' 'honour bright,' etc. (see OED). In the phrase 'code of honour,' the word implies a certain system of principles and obligations connected with the individual's recognition of these (see D.P.A.P., s. v.), and in such phrases as 'the honour of an artist,' 'the honour of a soldier,' or 'the honour of the church' and other institutions, we have a personal or collective connotation implying recognition of self as a member of this or that community or class or profession. Sometimes the phrase amounts to little more than reputation, e.g. 'the honour of a husband,' when impaired by conjugal infidelity or the failure to observe personal obligations.

The 'code of honour' is a species of etiquette observed by particular classes, trades, professions, etc. It thus belongs to the department of 'minor morals' (see MacKinnon, Manual of Ethics, p. 7, who points out the ethical value of 'Mrs. Grundy' and other conventional laws as safeguards against wrong and injustice). Whether honour takes the form of high-mindedness in business or commercial transactions, or of politeness and good-breeding in society, or of loyalty to one's particular class or caste or denomination, it is to be placed among the virtues as a descendant of benevolence, and touched with emotion; see Muirhead, Elem. of Ethics, s. v.). The duties imposed by the code of honour in graver matters—the code of chivalry, of business or good-breeding in lighter matters, according to Sidgwick (Methods of Ethics, p. 81), are often distinguished from moral duties by unreflective persons; e.g., there is the practice of dressing (g.e.)—a custom which is imposed by an unethical society and which an individual may reject on moral or religious grounds. His conduct would be classed by some as dishonourable, by others as a virtuous act. Thus 'honour' not infrequently involves a conflict with ethical right in certain stages of social development. No discrepancy is felt, e.g., in Hellenic civilization, where the idea of agwnyagia, the code of honour, and the moral code are not differentiated as they are in medieval and modern times. See the valuable discussion in, 'We give you this to drink' (Hobley, J.R.A.I. xii. 410). Further, in the ceremony of the coronation by white corn of the chieftains, the elders, or rather the members of the special class of elders competent to perform the ceremony, pour fat, milk, honey-beer, etc., into a hole in the ground, and in various other ceremonies, in the course of which it appears that this is an offering to the spirit of the
complet of the Elizabethan song-writer, Sir Richard Lovelace,

"I could not love thee, dear, so much,  
Loved I not honor more,"  
where it is implied that the passion of love has to be seconded to the higher moral.

In Christian ethics the idea of honour is associated with belief in a moral Judge. So v. Haering (Ethics of the Christian Life, Eng. tr., p. 226 fl.) remarks that "in the idea of 'honor' there is the impietie of the splendor of the Good as exhibited to a judge, whether this judge is the person himself or another; or, finally, God as the reader of all hearts, and the sole Judge of all."

The same writer proceeds to argue that to strive for recognition by a moral judgment is a task which the Christian cannot, or at least, as 'idee self-approval Luther's saying at Worms: 'They have deprived me of fame and honor, but sufficient for me is my Saviour and Redeemer Jesus Christ.'

The honour of man is always subordinated by NT writers to the honour to be hereafter accorded by a Righteous Judge (cf. Ro 24', 'seek for glory and honour and immortalit'; and 1 Pt 1', 'found unto praise and glory and honor,' where the idea of a future life is prominent). But the honour of the Judge permeates the honour of this world. The Pauline distribution of honour and dishonor amongst vessels 'unto honor' and 'unto dishonor' implies a destiny belonging to time, whatever may be the final issues; it is the destiny of unselfish service, in which the particular ability at the Indian in origin, an individual is consecrated to the uses of the Master of the 'great house.

The only scintilla of honour belonging to the sinner, is, according to v. Haering, the fact of his eternal destiny—a statement which largely defines the assumption underlying Christ's teaching regarding man; for to Him humanity, even in its most degraded form, is endowed with immortality.

2. Psychology.—We may derive some hint as to the psychological value of honour in Pauline's definition of honour, social or political, as 'ideal self-preservation' (System of Ethics, Eng. tr., ch. vi.); or in v. Haering's remark that "shame is the guardian of honour" (op. cit. p. 287), which implies that there is a connection between the moral concept involved in honour and an emotion which, according to Macdougall (Social Psychology, p. 148), is conditioned in the extent of its influence upon social behaviour. The conduct of the man of honour is undeniably regulated by social blame and praise. The very idea of 'honour' involves a reference to our social surroundings, the circle in which we move, or the larger world to which our influence inevitably extends. Psychologically, this is an advance on an earlier stage in the development of self-consciousness when natural impulse is regulated by the system of rewards and punishments imposed upon us by external authority, e.g. in the family or the school. It is a distinct advance when character and conduct are alike shaped by regard for the moral approval and disapproval of our fellows. Finally.

This regard leads on some men to the higher plane of conduct, conditioned by an ideal that may render them capable of acting in the way they believe to be right, regardless of the approval or disapproval of the social environment in which their lives are passed (H. A. Macdougall, op. cit. p. 293).

The nobler sense of honour which we associate with the saint or with natures peculiarly sensitive and refined lies in such individuals far above the coarse consideration of the verdicts of the circle to which they belong. R. Browning's Rabbi ben Ezra, with his conviction,

"All I could never be,  
All, men ignored in me,  
This, I was worth to God,"  
expresses devotion to a spiritual ideal which is unaffected by the praise or blame of men. At the same time, no ideal of conduct can be perfect unless it is a synthesis of the self-regarding and altruistic sentiments. The life of honour which we aim at realizing for all men, while we seek its perfection for ourselves.

R. MARTIN POP.  
HOOKER. I. Life and works.—Richard Hooker, author of Of the Laws of Ecclesiastical Polity, was born at Havercote, a suburb of Evesham, probably in March 1553-54. He was the son of Roger Hooker and his wife Joan. Roger and his elder brother John are described as the fifth in descent from James Vowell of Pancote. Hooker married the daughter and heiress of Richard Hooker of Hurst Castle, Southampton. Vowell is, therefore, probably the Welsh surname. Roger's father and grandfather, with the name Hooker, filled the position of Mayor of Exeter in the years 1529 and 1499. His brother John, as a result perhaps of his genealogical researches, adopted the name of Vowell as Vowell alias Hooker, and later in life as Hooker alias Vowell. This uncle's influence upon Richard's career was of such importance, and his work as an antiquarian and philologist, Vowell's influence has so much in common with the more famous achievement of his nephew, that some account should be given of him in any description of Richard's life.

John Hooker's father died when he was about ten years old, and John was educated by Dr. Newcomen, Vicar of Turnham, in Cornwall. He proceeded to Oxford, to Corpus Christi or to Exeter College, where he engaged in legal studies, but took no degree. From Oxford he went to Germany, pursuing his legal studies there, and in 1569 he matriculated at Corpus Christi College, Cambridge. In 1569, he married Margaret, the daughter and coheir of Thomas Russell, of Cumnor, and his own condition was such that he was unable to pay the expenses of his training. He was the author of a book on the reading of histories and seeking of antiquities and something to armor. He was made first chamberlain of the city in 1566. He has left large collections regarding the history of Exeter; but his chief literary monument is his edition of Holinshed's Chronicles in 1566-67, and his own contributions to that compilation. He is the author of a graphic account of the rebellion in the West country in 1549, and of recent Irish history. To Ireland he went as the agent of Sir Peter Carew of Mombos's Observatory, a position which gave him the opportunity to learn the extent of his influence upon social behaviour. The conduct of the man of honour is undeniably regulated by social blame and praise. The very idea of 'honour' involves a reference to our social surroundings, the circle in which we move, or the larger world to which our influence inevitably extends. Psychologically, this is an advance on an earlier stage in the development of self-consciousness when natural impulse is regulated by the system of rewards and punishments imposed upon us by external authority, e.g. in the family or the school. It is a distinct advance when character and conduct are alike shaped by regard for the moral approval and disapproval of our fellows. Finally.

This regard leads on some men to the higher plane of conduct, conditioned by an ideal that may render them capable of acting in the way they believe to be right, regardless of the approval or disapproval of the social environment in which their lives are passed (H. A. Macdougall, op. cit. p. 293).

The nobler sense of honour which we associate with the saint or with natures peculiarly sensitive and refined lies in such individuals far above the coarse consideration of the verdicts of the circle to which they belong. R. Browning's Rabbi ben Ezra, with his conviction,

"All I could never be,  
All, men ignored in me,  
This, I was worth to God,"  
expresses devotion to a spiritual ideal which is unaffected by the praise or blame of men. At the same time, no ideal of conduct can be perfect unless it is a synthesis of the self-regarding and altruistic sentiments. The life of honour which we aim at realizing for all men, while we seek its perfection for ourselves.

R. MARTIN POP.  
HOOKER. I. Life and works.—Richard Hooker, author of Of the Laws of Ecclesiastical Polity, was born at Havercote, a suburb of Evesham, probably in March 1553-54. He was the son of Roger Hooker and his wife Joan. Roger and his elder brother John are described as the fifth in descent from James Vowell of Pancote. Hooker married the daughter and heiress of Richard Hooker of Hurst Castle, Southampton. Vowell is, therefore, probably the Welsh surname. Roger's father and grandfather, with the name Hooker, filled the position of Mayor of Exeter in the years 1529 and 1499. His brother John, as a result perhaps of his genealogical researches, adopted the name of Vowell as Vowell alias Hooker, and later in life as Hooker alias Vowell. This uncle's influence upon Richard's career was of such importance, and his work as an antiquarian and philologist, Vowell's influence has so much in common with the more famous achievement of his nephew, that some account should be given of him in any description of Richard's life.
they also give a reason why a special effort should have been made to send Richard to college in 1588—because both his father and his uncle were out of England. John Hooker had made the acquaintance of Richard, when the Government appointed the latter a commissioner in the West, and it was natural that he should seek the Bishop's help in sending his promising nephew to college. We learn from Hooker's exceptionally able oration which was discovered by the schoolmaster of Exeter Grammar School, who declared him a 'little wonder.' But it is Walton rather than the schoolmaster who gives us the description:

"At his being a schoolboy he was an early questioner, quietly inquisitive why this was and that was not to be remembered; why this was granted and that denied! This being mixed with a remarkable modesty and a sweet, serene quietness of nature, Bishop Jewel's patronage obtained for the lad admission to Corpus Christi College, Oxford, probably at first as chorister, and afterwards as clerk; but on account of his father's pension failing, and Richard's maintenance at college was difficult. His name occurs five times between 1570 and 1575 in the list of poor scholars helped by the London merchant, Robert Nowell. In 1583 the 'Mayor and Chamber' of Exeter granted him a pension of 24. This last assistance was, no doubt, obtained by the influence of John Hooker, who was not the 'rich uncle' Walton enounces him to have been.

But the President of the College, W. Cole, out of regard for Jewel and also from a perception of the unusual gifts of his pupil, befriended him steadily. The appointment of the choristers and the clerks was in Cole's hands. It was not till December 1573 that Hooker was admitted one of the twenty disputants in the scholars of the College. To help towards his maintenance, pupils were obtained for him. Jewel's friend Sandys, Bishop of London in 1571, interested himself in this matter. His son Edward was of twenty, and two of twelve, were put under Hooker's charge (the tutor being nineteen), as well as a younger lad, George Cranmer, a great-nephew of Archbishop Cranmer. To the list of those who befriended Hooker in his need we must, no doubt, add his tutor John Reynolds, who came from the village of Finch, close to Exeter.

The account of the history of Corpus Christi College during Hooker's residence, with a careful treatment of the question of his maintenance, has been written by T. Fowler, and it forms a valuable and important addition to the Life by Walton. The latter makes it clear that the chief influences upon the young student were those of the dominant school of evangelical reformers. His patron Jewel remained for Hooker "the worthiest divine that Christendom hath bred for the space of some hundreds of years," while his tutor Reynolds, who became President of the College in 1588 and the leader of the 'doctrinal Puritans' at the end of the century, was Hooker's critic and confidant throughout. Oxbridge and the Eclesiastical Polity. It is, therefore, of special interest to find in Fowler's History the point established that there existed in Corpus Christi College "the leaven of secret Romanism, ... long after the Reformation was definitely settled, certainly through the reign of Elizabeth." This fact may in part explain Hooker's enlightened use of Roman Catholic books and authorities. Among his fellow-collegians were men of ability and scholarship who sympathised with the old religion, but had yet learned of necessity to respect and tolerate the new. Hooker's natural passion for truth and tolerance would make him instinctively appreciate and assimilate this attitude of mind.

There is certainly a short Latin tract, written probably between 1588 and 1590, by a certain Nicholas Morice, one of the Fellows of Corpus Christi College. It is an account of the yearly journey of the President and Fellows to collect the rents in their several reestates, and is written with amusing vivacity and humour. The writer sympathises with the old religion: "A good Pope I love; for an honest Protestant I can die the death; but an aged trimmer, as I live, I abhor." He gives us one of Hooker's, also of Morice's, jokes. A steward has made a foolish speech; "If Morice had been seeking, says Morice, 'he would have averred every part.' If Hooker, he would have smiled, with bent head."

Walton testifies in famous words to Hooker's beauty and grace at the end of his life, when "the poor parish clerk and he did never talk but with their books both on or off at the same time;" but his biography does not take into account Hooker's humour, or Morice's remark recognises. William Nutt, for whom Morice wrote his dialogue, was another fellow of Corpus, obviously of kindred tastes and sympathies. This party in the college was not without its influence on Hooker's development. It ought perhaps also to be remembered that Corpus Christi College was founded in the early part of the century by Bishop Foxe when the 'new learning' of Erasmus and Colet was influencing educational ideas. Foxe appointed a lecturer in Greek, and attempted in theology to replace medieval schoolmen by the Greek and Latin Fathers of the early centuries. Hooker's rationalism may have been fostered by the traditions of his College and his study of Theodoret and Augustine.

Hooker graduated B.A. in 1574, M.A. in 1577, and was made a full Fellow of his College in 1579. His special work was to lecture in Logic; and from this, according to Wood, 'his family style'. His writings, both in their vocabulary and in general form, retain throughout signs of his early preoccupation with logical terms and logical analysis. In 1579 the Regius Professor of Hebrew at Oxford was ill from some obscure mental disease, and Hooker was appointed his deputy, and delivered the Hebrew lecture while he remained at Oxford. There is no record when he took orders; but it was before 1581, when he preached in London at St. Paul's Cross. It is probable that his reputation at Oxford was the reason of his being invited to preach this sermon, which was in a true sense the beginning of his career. It contained a distinction between God's 'antecedent' and 'consequent' will, which was supposed to contradict the dispensation of Calvin (Inst. iii. 24, § 16), that 'nothing is less accordant with the nature of God than that He should have a double will.' Hooker was, therefore, branded as a man who refused to treat Calvin as inoffensive. He had probably no intention of opposing Calvin, but from the first the spirit of preaching and teaching was free, and acknowledged no master but the truth.

The visit to London resulted also, according to Walton, in Hooker's unfortunate marriage to Joan Churuchman. R. W. Church has been accused of doubting the accuracy of Walton's picture of Hooker's married life. It was not till December 1584 that Hooker was presented to the Rectory of Drayton-Beauchamp in Buckinghamshire, and it seems probable that his decision to give up his Oxford life was some time to when he was ordained, and was not forced upon him by Mrs. Churuchman, as Walton would have us believe. If Hooker had acted with the ludicrous weakness of Walton's story, his friends could hardly have recommended him to Whitley's place at the Master of the Temple. Hooker was not Whitley's first choice. His candidate was a certain Dr. Bond, whom the Queen considered too old for the post. Lord Burghley supported Walter Travers, already the afternoon lecturer at the Temple. Hooker was appointed..."
pointed Master on 17th March 1684–85, perhaps by the support of Archbishop Sandys and Bishop Ayscough; but all the circumstances indicate that he was a man whose ability, learning, and piety were well known, and from whom much might be expected. What immediately followed upon his appointment was a dispute dual between himself and Walter Travers, the afternoon lecturer, which increased in intensity until, in about a year’s time, Travers was inhibited by the Archbishop. Travers at once wrote a ‘Supplication’ to the Privy Council in defence of his conduct. Hooker replied in an ‘Answer,’ which he addressed to Whitsgift. Besides these documents, there are extant certain sermons in Hooker’s Works which contain those opinions of Hooker which Travers specially attacked. These are the sermon ‘Of the Certainty and Perpetuity of Faith in the Elect,’ and the ‘Learned Discourse of Justification.’ They were printed by Jackson in 1612; and, while the first can be identified satisfactorily with a sermon objected to by Travers, the second is not a sermon, but an amalgamation of several sermons which cannot be quite certainly related to those mentioned by Hooker and Mr. Travers. From these documents it is clear that the first cause of difference between the two men was Hooker’s refusal to be a party to Travers’ attempt to introduce surreptitiously into the congregation his own Free-lutheran methods and practices. Travers wished Hooker to submit to some ceremony of ‘allowance’ by the congregation, because he held that Hooker had been ordained ‘by virtue only of a human creature;’ he objected to Hooker praying before his sermon instead of after, to his mentioning bishops in his preaching; and to his kneeling at the reception of the Holy Communion. On these points the two rivals conferred together without coming to any result, so that, as Hooker says, quoting from Travers, it was natural enough that many of my sermons have tasted of some sour leaven or other. Travers’ complaints against Hooker’s preaching deal with three occasions. He brought up again the sermon of 1631 already referred to; he objected to a position of Hooker, ‘that the assurance of that we believe by the Word is not so certain as of that we perceive by sense;’ but, thirdly, the matter which finally roused Travers to deliver ‘three public invidictives’ against the Master’s teaching was a remark about Roman Catholics. The ‘mother-sentence whereof I little thought that so much trouble would have grown’ was

1. ‘I doubt not but God was merciful to save thousands of our fathers living in popish superstitions, insomuch as they sinned ignorantly.’

Travers understood Hooker to say ‘the fathers,’ but his outcry caused Hooker to attempt that summary of the good and bad in the Roman Church which is contained for us in the extant ‘Discourse of Justification.’ He was, no doubt, unaware of the strength of the fanaticism against which he was measuring himself. He was anxious to be fair to his Roman adversaries, and not to give them an occasion to say, as commonly they do, that, when we cannot refute their opinions, we propose such instead of theirs as we can refuse.’

Hooker therefore outraged the prevailing Puritan views on two crucial points: he declined to accept Calvin’s view of election, and he insisted on giving even Rome a fair hearing. His originality on these two points has not been justly appreciated. Even to-day his teaching is not fully accepted by controversialists. We must realize upon what broad grounds his practice was based. Travers complained that Hooker had said to him ‘that his best author was his own reason;’ Hooker replied indignantly: 1

1. Sermon I. in Church and Paget. Ill. 495.
2. Hooker’s ‘Supplication,’ ch. iii. 495.
3. Travers’ ‘Answer,’ ch. iii. 495.

1. ‘I alleged therefore (because Travers had objected to the question of authorities) that which might under no pretence be held as a sound, divine reason; reason whereby those conclusions might be out of St. Paul demonstrated, and not probably discovered of only; reason proper to that act of way whereby the things of God are known: theological reason, which out of principles in Scrip-

1. ‘I take no joy in striving. I have not been muzzled or trained up in it. . . . There can some nothing of contention but the mutual dances in the ashes of them both. . . . Things of small moment never disjoin them whom one God, one Lord, one Faith, one Spirit, one Baptist, bands of great force, have been put into any. . . .

These are the chief points of the dispute with Travers at the Temple. It is to be noted how important they were for the subsequent Church of England. Without the treatise ‘Of the Laws of Ecclesiastical Polity’ they might not have affected much; but, when carefully considered and extended in books of that work, they made the Church of England neither Rome nor Geneva, but a Church distinct from both. Hooker’s treatise did for the Church of England what Calvin’s Institutes had done for the Genevan Church; it gave it a voice and a character. It is tempting to dwell on the many anticipations of the Constitution which are to be found in these early writings of Hooker, and it is necessary to insist upon their importance, both as historical documents and as revelations of Hooker’s mind and disposition. But there is a difference between his point of view in the dispute with Travers and in the composition of the Polity. Hooker distrusted ‘extemporal dexterity;’ he believed time to be the ‘only mother of all debateable and discreet dealing;’ and in this spirit he began to examine the questions that Travers had raised. But he found his position at the Temple incompatible with profound and concentrated study. He wrote to Whitsgift that he was ‘weary of the noise and oppositions of this place;’ his contest with Travers had been

1. ‘I alleged therefore (because Travers had objected to the question of authorities) that which might under no pretence be held as a sound, divine reason; reason whereby those conclusions might be out of St. Paul demonstrated, and not probably discovered of only; reason proper to that act of way whereby the things of God are known: theological reason, which out of principles in Scrip-
on since the beginning of Elizabeth’s reign. Cartwright returned from Geneva to England in November 1575, which he did in time to assist in the writing of ‘A Second Admonition to the Parliament;’ the first had appeared earlier in the year. In these appeals to Parliament the writers frankly declare their belief in the English Church as established, and demand a reformation; they insist that the controversy is not for a cap, a tippet, or a surplice, but the great matters concerning a true ministry and regiment of the Church according to the Word. The tracts made a great impression, and Whigfelt, with Archbishop Parker’s approval, was called upon to reply to the Admonitioners. Before the end of 1572 he published ‘An Answer to a certain Libel entituled An Admonition to the Parliament;’ a second edition, augmented, was ready in 1573. Whigfelt had been Vice-Chancellor of Cambridge University when Cartwright was deprived of his professorship and his fellowship. T. C. therefore came forward as the champion of the Admonitioners against Whigfelt. By the middle of 1573 he issued ‘A Reply to an Answer made of M. Doctor Whigfelt against the Admonition to the Parliament.’ It was a book so much more considerable than the Admonitions that Whigfelt could not leave it unanswered. In a folio of 800 pages he went over the whole controversy again, reproducing the work in 1574 and calling it ‘The Defence of the Answer to the Admonition against the Reply of T. C.’ The length of Whigfelt’s fairness in printing large portions of the arguments of his opponents. Next year (1575) Cartwright was ready again with ‘The Second Reply of Thomas Cartwright, Doctor ofDivinity, to the Second Book of the Admonitioners,’ the ‘Rest of the Second Reply.’ To the ‘Second Reply’ of Cartwright no answer was made by Whigfelt or by any other representative of the Controversists. The work of 1576 contained a list of the books that he had written all that was necessary on the controversy, and his appointment in 1577 to the see of Worcester left him no time for literary controversy. He was made Archbishop of Canterbury in 1583, and in his primacy the attempt to introduce a disciplinarian or consistorial system into the English Church was resisted and defeated. It was, therefore, providential for Whigfelt that such a champion as Hooker appeared, to remove the reproach that Cartwright’s last book had not been answered. Whigfelt enjoyed any with a mastery of logical analysis, a breadth of learning, and a dignity of style beyond the reach of any other disputant. His books of the last word in the long controversy between Cartwright and Whigfelt, but when the first instalment of it appeared in 1594 it was in spirit something altogether new. The sober Hallam declares that Hooker mingled in these vulgar controversies like a knight of romance among callit brawlers.¹ Because be was temperate and conviction no more champion,⁴ he proved himself the judge and umpire of the lists.

Whigfelt did not move Hooker from the Temple till 1591, when he appointed him to the parish of Boscobee, six miles from Salisbury, making him in the same year prebendary and sub-dean of Salisbury Cathedral. In 1598 he was presented to the living of one of the Benefices of Salisbury, where he remained till his death. A chill taken in his passage by water betwixt London and Gravesend brought on his last illness. He made his will, ‘though sick in body, yet sound in mind,’ on 30th October, 1600; it was proved on 3rd December. There is, therefore, no reason for doubting the Latin note in Archbishop Laud’s copy of one of the books of the Polity, which states that Hooker died in the afternoon on 2nd Nov. 1600. His will made Joan Hooker, ‘my well-beloved wife,’ sole executrix, and ‘my well-beloved father, Mr. John Churchman and my assured good friend,’ Mr. Edwin Sandy, overseers. The inventory was £1092, 2s. 2d. It is probable, therefore, that Isaac Walton’s account of Hooker’s marriage is a distortion of the facts. That Hooker’s faculties were unpaired at the end of his life is clearly shown by the vigour, acuteness, and erudition of the notes he scribbled upon his copy of ‘A Christian Letter,’ an anonymous attack, published in 1599, upon bk. v. of the Polity.

2. The ‘Ecclesiastical Polity.’—Only five books of the work entitled, ‘Of the Laws of Ecclesiastical Polity, Eight Books,’ were published in the author’s lifetime. The Preface ‘to them that seek, as they term it, the reformation of laws and orders ecclesiastical in the Church of England,’ and the first four books, without date, were published in 1594. At the end of the Preface there was a short summary of the proposed eight books, indicating that in some form they were nearly complete at that date. It is probable that the defence of the Prayer-Book in bk. v., which is longer than all the others combined, became more elaborate than Hooker at first intended. The final description of the fifth book is different from that in the summary of 1594; Hooker finds he must resist the accusation that there is ‘much superstition’ in the Prayer-Book, and this necessitates a detailed examination of it. But for the effect which Hooker’s book produced, that the public mind it was an advantage that it came out in instalments. The portion published in 1594 was in several respects so contrary to popular tendencies, that, if there had been more of it, readers might have found it too much to assimilate. The Preface, just at the time when the infallibility of Geneva was becoming almost a dogma among the reformed Churches, reviewed Calvin’s character and career impartially, recognizing him as incomparably the wisest man that ever the French Church did enjoy, and praising his exceeding pains in composing the Institutions of Christian religion, and his less industrious labours for exposition of the Bible. Hooker insists that ‘wise men are men,’ and that what Calvin did for the establishment of his discipline was more commendable than that which he taught for the continuance of it established. The Preface has not received the praise which it deserves as a piece of historical literature. If we compare it with the notes upon Calvin made in 1599 on the margins of the ‘Christian Letter,’ we shall realize that Hooker’s account of Genevan affairs was founded upon a careful reading of Calvin’s letters and other documents, and shall appreciate the restraint of its style. It is to be regretted that Hooker did not live to expand his note. ‘Remember to make a comparison between Calvin and Benza. . . .’ The only man no man would displease, Calvin one whom no man durst.⁵ But in the Preface the touch of irony and humour which Hooker allows himself is more effective than direct invective, and runs through his whole exposition of the claims and teaching of the disciplinarian party. ¹They were entered in the Stationers’ Register, 29th Jan. 1602-3. ⁴Church and Pages, 1 154.

HOOLIGANISM.

The most famous book of the Polity is the first. It deals with 'laws and their several kinds in government.' It shows how the laws are subject not to the law, but to many, and insists that the welfare of society depends upon the proper adjustment and co-ordination of laws. The inquiry is impressive in its scope and in the range of authorities upon which it is founded. There is a true imaginative grandeur in Hooker's vision of the whole universe of angels and men subordinate under God to the reign of law, which is in all its various forms essentially an expression of the Divine reason. Aristotle and the philosophy of Greece, the Greek and Latin Fathers, and, finally, St. Thomas and the schoolmen, are co-ordinated with the teaching of the Bible in support of an absolute and unchangeable code as the measure by any one kind of law all the actions of men were to be condoned by the admirable order, where in God had disposed all laws, each as in nature, so in degree, distinct from other. Hallam has pointed out that Suarez, writing on the Continent about the same time as Hooker, arrived at nearly identical conclusions. Raleigh, in his History of the World, makes the same point on the authority of the already recognized, and the famous passage on law is re-echoed on the stage before 1611. In the latter half of the century, Locke's theories of civil government are founded upon quotations from 'the judicious Hooker.'

The second book resists the Puritan assertion that Scripture is the only guide by which all things can be interpreted by the rule of all things, hence this life may be done by men. Hooker, admitting that Scripture is an infallible guide, denies that the only guide by which men are led, and carries forward the argument by quotations from the Churches: 'Let it be sufficient for me presenting myself at the Lord's table to know what there I receive from Him, without searching or enquiring of the manner how the Christ formed His Church.'

It can hardly be doubted that Hooker left the last three books of his treatise finished at his death, but the finished copies were lost or made away with, and the books as printed have not received final revision. The sixth book as we have it is not the examination of lay eldership promised in 1609, but in different form on papacy and on episcopacy. The genuine sixth book has disappeared. Books vi. and viii. are the rough copies of the promised discussions of episcopacy and the relation of Church and State. Books vi. and viii. were printed in 1648, book vii. in 1642.

R. BAYNE.
Hooliganism is an international phenomenon. Witness the 'hoodlum' of California, the 'larrikin' of Australia, the 'khillig' of St. Petersburg, the 'Hooligan' of Germany, and the 'Apaches' of France, Wales, and Ireland.

2. Characteristics.—Lack of self-control, love of malicious mischief, indifference to the comfort or suffering of others, idleness passing into dishonesty and crime, horseplay passing into violence—mark the hooligan. In one sense, hooliganism is no new thing. We read of it in the Fortunes of Nigel, and in the accounts of the street fights which took place between the apprentices for the 'crown o' the causey.' University students have always given themselves over periodically to a form of hooliganism—smashing lamps, breaking seats, and turning the Graduation ceremony into pandemonium. In Norman Macleod's day the Glasgow students were declared to be a 'disgrace to the High Street.' and as a result, he is said to have made the distinction that, 'It is always drawn between them and, say, the Govan riveters who are out to 'paint the town red.'

3. Classification.—Modern hooliganism may be classified under various heads.

(1) Mob hooliganism, the conduct of the population on occasions of public rejoicing and national victory, as on 'Mafeking' nights. Then the people seem to lose their heads altogether and become disorderly and reckless. Viewed as a symptom of growing instability in the national character, such conduct is serious. Mob mind is a malady of our time (Ross, The Foundations of Sociology, New York, 1895, p. 113). Mob hooliganism varies with the density of the crowd. 'The way in which hooliganism asserts itself is a matter of the atmosphere in which the hooligan finds himself' (Westminster Gazette, 6th April 1906, p. 2).

(2) Political hooliganism, the glaring illustration of which is the conduct of the militant suffragettes. Smashing shop-windows, defacing monuments, setting fire to theatres, breaking hatches, and assaulting Cabinet Ministers cannot be described as anything but hooliganism of a very bad type. There is manifest lack of self-control, love of malicious mischief, and callous indifference to the sufferings of others. It is only fair to say, however, that militants are in a minority in the Suffrage movement, and that their tactics are strongly disapproved by many as unworthy and unwise, and calculated to hinder rather than help their cause.

(3) Industrial hooliganism, seen during strikes in assaults upon fellow-workmen, over-zealous picketing, and the destruction of goods, rolling-stock, and property. The hooliganism of the miners and dockers has been familiar, but the most exemplary patience and self-control during the strikes in Great Britain amongst the miners and dockers (1911-12). When workmen indulge in hooliganism, it is due either to a passionate sense of wrong or to the sinister influence of the baser sort who mingle with the workers and exploit them for their own ends. Among the hooligans of the industrial classes are 'Forty Thieves,' the 'Pomemos,' 'Velvet Caps,' 'Tim Malloys,' 'San Boys,' 'Crush Boys,' 'Pug Uglies,' 'Cop Beaters,' 'Tough Rids,' and 'Crook Jacks.'

(4) Literary hooliganism, manifested in savage criticism of books, of parties, and of parties. The classic examples of the first are the Quarterly's attack on Tennyson, Macaulay's attack on A'Court, and Montgomery, and Blackwood's attack on John Keats. The reviews in those days frequently led to duels, such as that between Jeffrey and Tom Moore. For sufficiently savage and hooliganaceous attacks on parties and figures one has only to read the popular magazines and newspapers—especially religious—of the present day.

(5) Criminal hooliganism.—This is the most serious phase. In all great cities there are gangs of hooligans with sensational names, such as the 'Forty Thieves,' the 'Pomemos,' 'Velvet Caps,' 'Tim Malloys,' 'San Boys,' 'Crush Boys,' 'Pug Uglies,' 'Cop Beaters,' 'Tough Rids,' and 'Crook Jacks.'

4. Causes of hooliganism.—The great root-causes is the undisciplined life, revolt against all authority, human, and Divine, which characterizes the lower orders, to-day, Roman Catholic as well as Protestant. The present writer's experience as a Prison Chaplain enables him to say that, 'It is a prevailing impression, hooliganism is as rife in Roman Catholic circles as in Protestant. This undisciplined life, however, is itself an effect, the resultant of many causes, some of which may be here indicated.

(1) Defective education.—Street lads have, as a general rule, managed to escape the ordinary influences of our educational system with the minimum of instruction. Reading remains for them an irksome task. They find no pleasure in it, and so are cut off from one of the greatest helps to self-control, one of the strongest safeguards against temptation. But their education is defective on the moral side as well as on the literary. Character has not been developed and strengthened, and the will has not been cultivated, self-control has not been taught. They are children of impulses and passion, and ill fitted to stand amidst the complex conditions of modern civilization.

(2) Wretched housing is another potent cause of hooliganism. Growing lads and girls in the poorer parts of our big cities are shamefully overcrowded. They have literally no room to live a decent human life, no opportunity of self-realization, no home life to speak of, and so they are driven out to the streets. Home to them means simply a place to eat in and sleep in, and not a place for social recreation or happy fellowship, still less for mental or spiritual culture. The loss is infinite, and tragic in its results upon character.

(3) Lack of playgrounds and open spaces for wholesome recreation.—When the children are sent out of doors to make more room in the houses, they are turned into the street or back-alley. The slum is their playground, and there is no finer breeding-place for young hooligans and criminals. Everything there, the whole environment, conspires to degrade and ruin the boy and girl. The process is sure, and the waste of young life and capacity is awful.

(4) Misdirected energy follows naturally. There is nothing wrong with the energy, any more than there is with steam or electricity. What it needs
is guidance into proper channels—not repression, but proper expression. It is easily misguided, misguided; and the result is hooliganism.

(6) Preventative measures.—Reformatory and preventative measures do not have the effect of preventing crime, but of preventing the anti-social tendencies of individuals from developing into criminal tendencies. The problem of hooliganism is largely the result of the social, educational, and industrial system. The children take after their parents, follow the only example they know, and so the vicious circle continues to be trod.

(7) Mental and moral defect.—A very moderate first-hand knowledge of hooligans will convince any one that many of them are mentally and morally weak. They are defective; and experience shows that defectives soon become delinquents. Mental instability is frequently found associated with hooliganism and crime. As already hinted, hooliganism may fairly be described as a by-product of our civilization. Our social system is largely responsible for it. It is, therefore, a social problem. We must cease to manufacture hooligans.

5. Care of hooligans.—The first serious attempt to deal with it was made in 1788, when the Philanthropy Society was formed in England by Robert Young. In 1808 the Dalston Refuge was founded. In 1815 the Prison Discipline Society. Parliament began to tackle the subject in 1878, when Pitt brought in a Bill which, however, proved abortive. In 1811 and again in 1818, Parliament condemned the imprisonment of children for lawless conduct. Royal Commissions dealt with the matter in 1834 and 1837. The Education Committee for Oct. 1931 said:

'The young offender gains ground upon us, the plague of the policeman, the difficulty of the magistrate, a problem to the statesman, and a sorrow to the philanthropist.'

That same year a Committee of the House of Commons recommended the establishment of Reformatory Schools, and in 1857 the Industrial Schools Act was passed. Its results were remarkable. In 1866, no fewer than 13,981 children under seventeen years of age had been committed to prison. In 1897, thanks to Industrial Schools, the number had fallen to 1888. Up to 1901 (according to figures given by John Trevethen, Secretary of Redhill Farm School, in an article in the Nineteenth Century for Jan. 1901), out of 3611 reported on by Reformatory, 2966 were in regular employment, 123 in casual employment, 641 had been convicted, and 357 were under sentence. Of 9338 reported on by Industrial Schools, 6379 were in regular employment, 480 in casual employment, 460 had been convicted, and 354 were unknown; i.e. nearly 50 per cent were doing well, and only some 15 per cent had been tried—a very satisfactory record. The charge, then, that 'Reformatories are hooligan manufactories,' is singularly unjust and ill-informed. Considering the material supplied, the proportion of failures is surprisingly small, and a good many of the failures are caught up and reformed by the Borstal system. One-third of our burglars are boys from 16 to 21, and 20 per cent of crimes against morals are committed by those under 21. In 1891, Dickens visited the Industrial Society's Farm School, Redhill, and wrote an interesting article about it in Household Words, ending as follows:

'The system must be tried, the administration must be reformed, the preventable young criminals must be prevented, the State must put its Industrial and Farm Schools first, and the prisons last—and so to this combination you must come. You may put a few boys up to a little, and destroy (not irresponsibly) two or three thousand of immortal souls in the meantime, but the change must come.'

These words were prophetic. The change has come. We are now putting our schools first, and our prisons last. That, is, educative methods are displacing punitive methods. Hence the new treatment of juvenile offenders, wise and firm, known as the 'Borstal.'

6. Preventive measures.—Reformatory and preventative treatment, however necessary and valuable, does not go to the root of the matter, and will not eradicate hooliganism. Therefore preventive measures must more and more be adopted. Generally, whatever makes for social amelioration makes for the extinction of hooliganism, and the production of a law-abiding, well-behaved, self-respecting population. The following reforms, however, have a special bearing upon the social phenomenon which we have been considering. Hooliganism will never disappear until we have—

(1) An improved system of education which will aim deliberately at moral training, the disciplining of the will, the formation of character.—To secure this we could well afford to drop much with which the curriculum is at present overloaded. Boys especially are ruled by ideals, and we must instil into them higher ideals than that of the robber knight and the pirate chief.

(2) Industrial training.—With a basis of hooliganism is due to casual labour, blind-alley occupations, unemployment, and consequent street-loitering and larking. R. Dyer, a leading educational expert, truly says that "One of the most important problems of the day is the deliberate and complete organization of the whole field of industrial work in a way that is recognized by the most critical social psychologists as the original training and preparation for the years of adolescence" (Education and National Life, London, 1913, p. 77)."
HOPE (Christian)—Hope is the name of a grace which is characteristic of the religion of the Bible. St. Paul sums up the misery of the Gentile world in a single sentence, when he speaks of them as "σκότος νόος και σκότος σώματος εἰς τὸν κόσμον" (Eph 2:12). The Bible, on the other hand, is the book of hope. One strange book (Ecclesiastes) reflects the deep melancholy which was a pervading note of ancient literature; but hope cherished in the darkest times, hope continually kept alive by the writings of the prophets, hope of a future never abandoned and ever shining anew in spite of every conceivable discouragement—this is the dominant note of the OT. Whatever is written therein was written for our learning, that through patience and through comfort of the scriptures we might have hope (Ro 15:4). The God whom the OT promises is "the God of hope"—the Author and Giver of hope (Ro 15:13). The "hope of Israel" (Ac 28:20; cf. 26:20) might be understood in widely different senses. For St. Paul at least it included not only the complete fulfillment of the Messianic expectation in its widest sense, but the fulfillment of the true destiny of the individual in the glory of the resurrection life. To many modern Jews it may mean little more than the expectation of a brighter day for their oppressed and down-trodden nation—an expectation based on faith in God's justice and His unique relation to Israel. But in any case, hope—the boundless expectation of God—is the deepest note in the poetry and prophecy of the OT; in a transfigured form, it reappears in the NT. (For the meaning and use of the word in the OT and NT it may suffice to refer to EDB, s. v.; and J.E., s. v.)

Hope, like faith and love, is a Scriptural virtue. It cannot be said to have a place in heathen ethics. There are isolated passages in praise of hope. A fragment of Manander is quoted by Jerome Taylor, _Life of Christ_, pt. 3, § 15: "... οὐκ οἶδα τί προσευκτήριον ἡ δόξα του Ἰησοῦ." According to windows, hope w. p. 6. But heathen hope was low or aimless. "Thou dost not hope," says Augustine to the Christian, "as the Gentiles hope, as the citizens of the day, as the people of the earth, as the artisans, as shipwrights, as sailors, as men who believe in a world beyond this one; but as a man who believes in God, and who believes in the God of Christ and not in the god of the pagans. Indeed, thou believest in God, and thou seest and understandest all things."

But heathen hope was low or aimless. "Thou dost not hope," says Augustine to the Christian, "as the Gentiles hope, as the citizens of the day, as the people of the earth, as the artisans, as shipwrights, as sailors, as men who believe in a world beyond this one; but as a man who believes in God, and who believes in the God of Christ and not in the god of the pagans. Indeed, thou believest in God, and thou seest and understandest all things."

In both Testaments, indeed, the duty of hope is based on the revealed character of God: (a) as omnipotent and therefore able to fulfill His purposes, even against human expectation (Ro 4:17); (b) as specially pledged to be the Saviour and Sanctifier of His elect people (Jer 14:1 17:5, 6; Ps 40, etc.); (c) as the righteous moral Governor and Judge of mankind, whose ways are destined to be finally vindicated in spite of all the enigmas which burden the just man with a sense of unfathomable mystery.

The exact objects of hope differ to some extent in the NT. The Anglican Catechist (18th) expressly denies that "the old fathers did look only for transitory promises." The hopes of merely temporal good, which were characteristic of primitive man, were double; everything and everybody became the discipline of calamity, so that hope itself became spiritualized (cf. Ps 63:17, 18, etc.). On the other hand, the gospel is the religion of the "better hope" (He 11:1). Hence it is the hope of men who for the first time enter into intimate fellowship with God (see Bruce, _Ep. to the Hebrews_, Edinburgh, 1899, p. 271 f.). Thus the hope of the Christian is a "good hope" (2 Th 1:2), a "blessed hope" (Tit 2:13), a "hope of the calling of righteousness" (Gal 5:5), of "salvation" (1 Th 5:9), of "eternal life" (Tit 3:1). It is an expectation of spiritual blessings already realized and powerfully conveyed to man in Christ. Nay, Christ Himself is "our hope" (1 Th 1:1), the living pledge that the divinest promises of life, immortality, and glory will find their fulfillment for all who are lovingly and truly related to Him. His resurrection is the ground of hope because it is an earnest of the fulfillment of man's destiny (1 P 1:13). So Aug. (c. Fusc. xi. 8) strikingly says that the Christian expectation of future bliss and immortality "in Christiam non spe sed essentia est." The believer, he adds, "in Christiam habet substantia esse." The present article will deal with the function of hope in the moral life of the Christian.

1. The _object of hope_ is, of course, some form of future good, the true blessedness of which man is capable. The object of hope is the highest good—"bonus futurum, arduum, possibile haberi" (Aquinas, Sum. ii. 2. xvii. resp. f. 165). For this is described in various ways in the NT. The Synoptic Gospels the _sumsum bonum_ is the Kingdom of God or of Heaven; in the Fourth Gospel, eternal life; in St. Paul's Epistles, _eternal_ blessedness of God; in Hebrews, access to God and unrestricted fellowship with Him. All these are simply different descriptions of one supreme blessing, viz. that spiritual state which carries with it the very presence of God in the human spirit. In a true sense, then, God Himself is the supreme object of hope; "bonorum summum Deus nobis est" (Aug. de emer. Exp. 13; cf. 20; etc.). For God, says T. H. Green, "is all which the human spirit is capable of becoming" (Proleg. to Ethics, Oxford, 1853, § 187). The final _beatitude_ for which we look is the reign of God in man, i.e. that perfection of our nature which results from His indwelling presence in man. "Non alius aliud Domine Deus tuus spectes, sed ipse Dominus spectes tua" (Aug. Enarr. in Ps. 39 [40] 407). So Aquinas, Sum. ii. 2. qu. xvii. art. 2, says: "Proprium est principale speci objectum est ipse aeterna beatitudine.

2. We may next discuss the _claim of hope to be a Christian virtue_. We must remember that man's nature, being disordered by the Fall, can be restored only by an act of Divine power. The revelation of God in Christ, making known His character, purpose, and requirement, necessarily affects the normal springs of human action. Thus, for a Christian the primary springs of action—the affections, appetites, passions, sentiments—yield to certain higher principles directly resulting from man's changed relation to God. These are the "theological virtues"—Faith, Hope, and Love, so called because they bring man into a right relation to God and are Divinely communicated to him. The Gospel revelation of God is, in fact, a new inspiration; it develops in man a new attitude towards God, and, consequently, a new disposition or character. It sets before him a new end or aim of action, viz. union with God. Hence the necessity of _faith_, which appropriates the revealed facts—the good will and Fatherly love of God, the Divine victory over sin, the possibility of _blessedness_; _love_, which responds to the goodness of God, and embraces in union with God the Divine aim of creation—an end which is wider than any merely personal good, and includes the well-being of others; and, finally, _hope_, which, in reliance on the revealed character of God, looks forward with confidence to the fulfillment of the Divine

Aquinas, Sum. i. 2. qu. xii. art. 1 resp.
HOPE (Greek and Roman)

Such conduct is contrary to the spirit of the petition, ‘Lead us not into temptation’ (see W. H. Mill, _Fieschi Sermons on the Temptation_, Cambridge, 1844, no. 5; Bernard, in _Fs. ‘Qui habetis’, Herm. xiv._). The remedy against presumption is the spirit of humility and holy fear, and attention to the warnings and exhortations of the gospel: ‘Abstain from every form of excess’ (see Taylor, _Holy Dying_, ch. v. § 6) and _Aquinas, Sum. ii. 2. qu. xx._

The defect of hope, on the other hand, is despair, which springs not necessarily from indolentness but from lack of confidence in God and servile fear. The Heb. verb for ‘despair’ (רָעֵשׂ) is an uncommon one (Ec 2:29; see also 1 S 27, Job 38, Is 57, Jer 32 18). The conception occurs in the NT only to be negatively (2 Co 4); the exception in 2 Co 1 is, as the context shows, only apparent. Despair is, in fact, incompatible with the spirit of faith (1 Co 13). It is, as _Aquinas_ points out, a principle of sin (cf. Eph 4:18), and that for three reasons. (1) Just as hope is based on a true conception of God’s character, so despair results from a false and unworthy one, by which God is robbed of His due honour. (2) Despair acts on the will and leads to recklessness of living: ‘Abstain from unbecoming homilies labantur in vita et a bonis laboribus retrahuntur.’ (3) Further, despair implies that ‘aversion from the unchangeable good’ which is the very essence of sin. ‘If sin is, in some respects, a descent into hell’ (Isidore, quoted by _Aquinas, Sum. ii. 2. qu. xx. art. 3_; cf. Aug. _Enarr. in Ps. 144_).

The causes of despair are various. Moralists specially mention two sins: love of a good toward evil (g.v.—that spiritual sloth which robs a man of hope and so casts him down that he thinks the good unattainable. To these may be added the lack of gratitude for God’s benefits, impatience, and culpable ‘weakness of spirit’ (Taylor, _Holy Living_, ch. iv. § 2).

The remedies suggested for despair are at the same time means for sustaining or augmenting hope. Taylor advises (loc. cit.): (1) Sobriety and moderation in our expectations, and consequent indifference to the dispositions of the flesh and to the vicissitudes of human life. (2) Reflection upon the character of God in whom there are all those glorious attributes and excellences which in the nature of things can possibly create or confirm hope; the soul must contemplate the power of God and His fidelity to His promises. (3) Recollection of Christ’s travail for our redemption and the manifold unmerited favours of God to avarice and pardon. In this connexion _Augustine_ (in _Joyn. Enonym. tract. xxiii._ III.) refers to Exk 19:2 as a text of comfort for the despairing. (4) Remembrance of the past mercies of God, and of His providential care for the soul. This is implied in St. Paul’s words, ‘experience wrought his hope’ (Ro 5). To these may be added (6) the abiding and continuous spirit of penitence—contrition for sins already forgiven and often-repeated acts of repentance. Speus sus cuique est in scientia propria, quod substantiam se sentit ad dilectionem Dei et proximi cognitionemque profecto’ (Aug. _de Doct. fili. 14._)

R. L. OTTLAY.

HOPE (Greek and Roman).—The etymological association of ὧπος with ὑπάλληλος, ‘pleasure,’ ‘will,’ ‘desire’ is perhaps illustrated by _Pindar, Pyth._ ii. 49; but the neutral meaning, whether of good or evil, common from Homer to
SOLON re-echoes the thought (xlii. iv. 33 ff.):
1 We mortals think alike, the good and bad:
Anticipation makes all men glad.
Till evil strikes, then we appeal our fate
Who gave on airy hopes in vain.

This general moral be applied to every trade and
vocation in turn, in illustration of the ample proposition that hope makes in all designs begun
on earth below ' (Shakespeare, Troilus and Cressida, l. 11. 3.)
In similar vein, Theogonis writes (387):

'Hardy and Hope, two cruel gods are they,
Who equally on all mankind deprey.
Men's fortunes prosper oft beyond their thought
And hope, and oft good counsel comes to naught.'

After Theogonis, Findar (Nem. xi. 46) and the
dramatists (Soph. Antig. 616; Eurip. Sup. 479)
take up the parable. Thucydides incorporates it
in his cynical philosophy of human motives (see
P. Shorey, Transactions of Amer. Phil. Assoc.,
vol. xxiv. [1895] p. 71; F. M. Cornford, Thucydides
Mysticator, London, 1907, p. 107 l.)

'Hope easily led astray' is one of the elements of which
the mortal soul is compounded by the divinities
that came to the making of man in Plato's
Timæus, 69 D, and hope is a motive of crime in
Antiphon (fr. 68, Diels) and Democritus (fr. 221).

This is prevailing tone. But, of course, hope
is also described as a blessing and a counsel,
and there are parallels with most familiar quota-
tions from Pope's 'Hope springs eternal' (Theogonis,
1135) to Gay's 'While there is life there is hope' (Thuc., iv. 49), and Thucydides' hope is but a
dream of those that wake' (Findar, ap. Stob. Flor. 111. 12).
'Aschylus' 'Exiles feed on hope' (Ag. 1668) became a proverb. (For a collection of
comparisons, see Stob. Flor. 110 ff.; C. F. Nигельбах, Nachhomers, Thuc., Nürenberg, 1857,
p. 383 l.; L. Schmidt, Ethik der alten Griechen,
Berlin, 1882, ii. 70-75.)

(3) The better or fairer hope is almost a technical
term for the assurance of a blessed immortality
which the mysticism brought to the initiated (see
C. A. Lobeck, Apollonius, Königsberg, 1829,
l. sect. 11, pp. 69-73; Findar, in Plato, Rep. 331 A,
and Plato, Phædo 63 C, where Burnet comments,
'Epia is Orphic for faith'). This better hope
extends to worldly prosperity also, and is some-
times the reward of moral and not merely cer-
emonial purity (cf. Isocr. iv. 23 with viii. 34-35, i.
39, and xv. 322). In Antiphon, vi. 6, it is a
sanction of the oath and of the righteous adminis-
tration of justice.

(3) The friendly exhortation not to despair but
to cling to hope (Soph. Culp. 674, 675) is the
inescapable transition into the affirmation of the
duty of hopefulness (Pind. Isth. vii. [viii. ] 10;
Eur. Hera. Parr. 105; Horace, Odes. ii. x. 18). The
transition and the blending of the idea with the better
hope of the righteous appears in a notable passage of
Plato's Laches (732 C).

More simply Demosthenes (de Cor. 97), in an often imitated passage, declares to the
Athenians:

'Good men should attempt all honourable things,
easing before them good hope as a shield and beaying bravely what
God gives.'

Similarly Menander (fr. 572, Kock):

'When thou dost well, thrust forth to cover thee
Good hope a shield, in confidence that God
To righteous boldness lends a helping head.'

But there is a wide gap between these sayings and Emerson's optimistic Americanism: 'We
judge of a man's wisdom by his hope.'

To Epictetus (fr. cxv., Didot) and Democritus (fr. 116.
Diels) is attributed the saying that 'The hopes of
the educated are better than the wealth of the ignorant.'
The saying, 'The hopes of right-
thinking men are attainable, those of the foolish
not' (Democrit. fr. 58, Diels), may be ultimately
derived from Plato's Philebus, 40 A-B.

(4) Hope is freely personalized in Greek poetry,
and Clytemnestra's 'My hope shall never tread

HESIOD, is still for Plato the normal one (Laches,
644 C [which Liddell and Scott, s. v. Ósw, II.,
misunderstand] and Phædo, 39 E). The verb
throughout Homer seems to mean 'expect' or 'deem'; the noun occurs twice in the Odyssey
(xvi. 101 and xix. 94), in a formula, in the sense of
'hope.' There is no personification of hope in
Homer.

In the myth of Pandora (Hesiod, Works and
Days, 96), Hope remains in the jar when other
evils have flown forth and been dispersed among
men. The natural and traditional interpretation of
this is that hope stays with man as his sole
consolation (Campbell, Pleasures of Hope, l. 30-40;
St. Symonds, [Gr. Morol., and Religion, Cowley],
The Mistress). On this view the jar contained a
mixture of good and evil, corresponding vaguely
to the two jars in the Homerio apologue (II. xxvi.
527-533). Further confirmation is found in tales of
Babrius (58), in which the jar contains only
blessings, hope remaining when the others are
dispersed and lost. But, if we may press the logic of
a myth, it can be plausibly argued from the phrase
'other evils' that hope too is an evil. It
is the delusion which, in Cowper's words (Hope,
1823), is there to stamp the vanity of all that.
That men have deemed substantial since the fall,
and there is abundant confirmation of this view in the
many passages of the moralizing poets which warn the
too trusting to the fate of 'the man of special danger
of his temperaments, 'the chase of a cheating prey
with hopes that shall never be fulfilled' (Pind.
Pyth. iii. 23). Another ingenious mediating inter-
pretation makes the blessing to consist in the
absence of hope in the sense of foreknowledge of
fate. This would do for humanity what the
Prometheus of Aschylus (Prom. 290) boasts that he
did by implanting in them 'blind' hopes that they might hide with thin and rainbow
wings the shape of death (Shelley, Prom. n. iv. 62).

A propon de l'Epia hésiòique, id. xxii. (1910)
466, is on the hypothesis of the myth that will satisfy all requirements of a captious
logic. Why, for example, should Zeus in the
accomplishment of his revenge wish to console
mankind? And how, on the other hand, can in
the one case the escape from the jar and in the
other the remaining behind in it consistently
symbolize the presence with mankind of a blessing
or a bane?

In post-Hesiodic literature we may distinguish,
though we cannot keep apart, (1) the idea already
of that hope is an illusion and an evil; (2)
the hope of the better hope of the initiated or the
good; (3) the anticipation of such modern ideas
at the duty of hopefulness; (4) the personification
of hope.

(1) 'Creatures of a day,' says Simonides of
Amorgos (i. 8-7),

'They live like cattle, knowing not how God
Shall bring such things to its appointed end.
But Hope and covetousness make them desire
Their agiton of their vain desires.'

(See on this Wilamowitz, Sappho und Simonides,
Berlin, 1913, p. 272 ff.)

1 By the Sapphoists poets hope was classed among the evils
which true sage must renounce to secure perfect tran-
quility of mind (cf. Schölting, Ind. Sprückte, St. Petersburg,
1907-19, no. 1040-52, 1177, 1444, 2800).
there are marked analogues with Nahua culture. The composite character of the Hopi is also substantiated by their legendary history, which represents different portions as coming from widely separated parts of the country.

The term 'Hopi,' which those people prefer, and which alone should be applied to them, is a contraction of *Hopi:dii:,* 'peaceful ones,' or *Hopi:dii:kso:nii:da,* 'peaceful all people'; and the common appellation of *Moquis* (with many variant spellings), which means 'dead' in Hopi, is an offensive mimoer.

As a tribal name *Moquis* is seemingly of alien origin and of undetermined etymology—perhaps from the Keresan language (Míshkwa in Laguna, Mo-to in Acoma, Moat in Sia, Cochiti, and San Juan, Kh'wii in Jemez, and Soke in Upper and Lower Ute), and described by Otho T. S. M. T. in 1892 as "Mochuqu" (1890). They are known to the Apache also as *Kwa:* ("live high up on the mesa"), and the Zuni sometimes generalise and call them *Moquis* ("smallpox people") and *Hopi:* ("sorefoot people"). The use of the name *Ponca* by the *Tonkawa* (Poncas) and *Chatick:* (isolated buccis); for further synonyms, see Fedde, op. cit. 606 f. 1.

1. History. The districts from which the phratry names were, according to Fedde (19 2BEW, 582): Tokomabi (S. Utah)—Chas. Ala.; Palaiskwahi (S. Arizona) and the Little Colorado—Patung, Longya (?), Pakti, Kukkuk, Pits, Tawa, Tabo; the Maboi (Rio Grande valley) and New Mexican pueblo (Zuni, Acoma, Jemez, etc.)—Houn, Kopok, Pakah, Ana, Ruah. Roman steps in which these clans reached Tusayan is very uncertain (Fekows, 19 2BEW, 581 f.; for the native traditions, of the very full account by Stephen, op. Mindeleff, 5 2BEW, 18 ff.; also Voth, *FOMAS* viii. 22 ff., but perhaps the most reliable summary is that of Fekows (Am. An. series new, ii. 894 ff.).

The existing Hopi pueblo, Walpi, Shongopovi, Mishongonvi, and Oraibi (the Oraibi colonised from Shongopovi) were established before 1250; Shicuvo (colonised from Walpi) and Shippanovi (colonised from Walpi and Mishongonvi) were founded about 1750; and Hano was built early in the 18th cont. (Fekows, Am. An. viii. 414, and 19 2BEW, 581 f.; see, further, HAI ii. 901, 563 f., i. 871, i. 145 f, 564, 551, i. 531). The inhabited pueblos are elaborately described by Mindeleff (5 2BEW, 61-79), who also describes the ruins of Old Walpi, Old Mishongonvi, Sigtamui, Atawasti, Tokomabi, called by him 'Horo House,' Cheakshaviu (called by him 'East House'), Kawayuk (called by him 'Mishiponvi,' Kwahtoni, Chukuri, Chukuri, Pakha (op. cit. 45-60; for the tradition regarding Pakha, see Stephen, op. Mindeleff. 46 f.)

These are only a few of the ruined sties, and to these may be added Chukwahciul, Honschi, Kachiul, Kikakoi, Kukkuk.

1 The spelling of Hopi names is by no means uniform; in the present art, the vowel have their closest sound is represented on a "but": p and d, and 4, are indistinguishable; *s*h is in "disab": *s* in "finger": *s* in small; *s* in German sh.

2 For the Hopi tradition of the destruction of the above, see Voth, *FOMAS* viii. 45-53.

On this subject generally said to be Tewa in origin, and to have migrated to Zuni and thence to the Hopi, being one of the components of the population of Awaiki, see Fedde, *FOMAS* viii. 54-55.
Hopi

Ground makes probable the bitting of any object within several feet of its path. So far as is known this is the only acrophobic club used in America. The material is Gambel's oak (Quercus gambelii), and a branch of the proper cactus is selected for its manufacture. One end is cut to form a handle, and the club is usually varnished with resin and painted with an irreversible design in black, red, and green. Of late years a rabbit figure is frequently painted thereon. The weapon has a religious significance, probably arising from its use in ceremonial 'rabbit hunts' (Hough, *Hopi* ii. 245). The *pilatu-kokalo* constitutes part of the equipment of the male and *Pilu-kokato* machinist (Fawkes, *E.R.B.E.W.,* 118, 119, plates xix., ii.)

3. Birth, naming, and initiation.—The parturient mother is usually attended by her mother (or, if her mother is dead, by her aunt or older female relative), who is not, however, generally present during actual parturition, except in a case of difficult labour or the like. The father likewise remains away under extraordinary circumstances. After the child has been born, its head and the head of the mother are washed with sooty sand, and the infant's body is rubbed with ashes, after which an ear of maize is placed in its cradle to guard it. The care of the newborn child devolves mainly upon the paternal grandmother (or, if she is dead, upon her sister or other female relative on the father's side), and until the fifth day the mother must not see the sun or receive any solar light. On the fifth day the washing is repeated, as well as on the 10th, 15th, and 20th. During this period the mother may eat no meat or salted food, and all sustenance must be prepared, at least in part, with a decoction of juniper leaves; on these 20 days the mother is furthermore, forbidden to be barefoot. Shortly after birth four horizontal lines are drawn upon the wall of the room, these being called the child's 'house,' and on each of the days of washing one of these lines is solemnly effaced—a ceremony whose real meaning is still unknown—and is offered to the rising sun with a prayer for old age.

The 30th day marks the purification of the mother, the naming of the child, and its presentation to the sun. On this day both mother and child are again solemnly washed, the former also being obliged to stand over a steaming vessel into which juniper is thrown, thus receiving the final purification. The latter, together with sweepings and everything connected with the mother during her ritual impurity, is then thrown away without ceremony. The after-birth, which has been kept until this time, is sprinkled with sacred meal, a feather is added, and the whole is rolled together, waved over the mother's head, and carried away to be shaken out or buried by the paternal godmother. When the latter returns, she rubs the mother's arms, neck, and face, and the child's face (on the Middle Mesa she takes ears of maize and makes for 20 days, over the front of the child, without touching it, from head to foot), and with prayer-meal and ears of maize she makes some such prayer as, 'May you live to be old, may you have good meat and may you keep well, and now I name you N.' All the other

---

2 It may be queried whether these lines do not represent the four 'houses,' or stages, of the Hopi creation legend. On the child's 'house,' see *Voit, PUMAS*, vii. 49.
women belonging to the father's clan do likewise, one of the many names thus given being finally selected to be borne until initiation into one of the fraternities. The child is now placed in its cradle, and, when the father (who is present or absent when these ceremonies have been in progress) announces sunrise, the infant is carried by the godmother, escorted by the mother, bearing prayer-meals. The face of the child is uncovered, and the godmother and mother pray over the meal and cast it towards the rising sun (on the Middle Mesa the godmother plants two bakes (on which see below, § 11)—one for the mother and one for the child).

Meanwhile, provision has been made for a feast, at which various foods (stewed meat and shellfish) and plenteous (sweet mush) are indispensable. The first morsel of each food is given in sacrifice to the sun, and the child then receives a small bit. After the feast, when the mother has returned a larger portion of maize meal than was given her for her child, the guests return to their own homes. About the age of eight or ten, children undergo what may be the survival of an initiation rite. In the course of the Powant ceremony the children are led into the presence of the two Tufwup kachinas either by their mothers or by their godfathers (godmothers in the case of girls). The children, who carry ears of maize, a handful of prayer-meal, etc., are then bobbed in prayer-meals by the kachinas with yucca whips, the boys severely, the girls more gently. After them the godfathers (but not the godmothers) are whipped, and then men with various aliments. Previous to this whipping the children have believed that the kachinas are real; after it they know that they are in reality only personations (F. Swales, 1868, 353-365; 24. F. W. H. S. B. 36, 69; Voth, FCMAS vi. ii. 436 f.).

Children are initiated into the various fraternities at about the age of fifteen or eighteen, and they then receive the names by which they are permanently known (for the initiation rites of the Antelope fraternity, see Fowke, Stephen, and Owens, J. A. E. iv. 62-63). All Hopi proper names have some reference to the name of the Name Giver, never, unless coincidentally, to the clan totem of the Bearer of the name (Voth, FCMAS vi. iii. 68). The real meaning of these names varies according to the clans which give them; and, even when the meaning of the individual components of proper names is known, grammatical vagueness often renders precise determination of the meaning of the whole very doubtful.

4. Marriage. The marriage ceremony of the Hopi comes strongly to the fore in their marriage customs. The choice of partner usually depends upon the youth and maiden concerned, but the actual proposal is generally broached by the girl or by her representative. Names are exchanged, but there is no marriage by purchase. Marriage is rare in summer or late spring, but is common in autumn or winter, when agriculture is at a standstill. Escorted by her father (or, if she be dead, by her aunt), the girl goes to her future husband's house, where she grinds maize for three days, during which time she is expected to talk as little as possible. On the morning of the fourth day the heads of the pair are washed by their respective future mothers-in-law, who then pray, casting the sacred meal towards the dawn. After a wedding breakfast, a mixture of lime, black stuff, etc., is thrown into the room. At Orashi, after this first washing separately, usually the flag of the rising sun is then washed together in each bowl, and this hair washing, and especially the washing of the hair of the bride, is said to have "crucial moment" in which the two are supposed to "become one." (F. W. H. S. B. 24, 36, 69; Voth, FCMAS, vi. ii. 146.)

5. Burial.—The hair of the corpse is washed and dressed; the chin and the lower cheeks are painted black; the head is bound with a cotton cord; and the face is covered with a rain-cloud masque; the body is bent together, tied, and wrapped; and prayer sticks are placed in the hand. There is crying and mourning after death, but no screaming or loud lamenting, although there is wailing during the washing of the body and on anniversaries of the death, professional mourners being unknown (C. F. C. Higham, HAI 1906). The adult dead are buried at night or early morning in a sitting position, facing the sun and looking towards the slope of the mesa, or of hills near them, or they may simply be laid in crevices in the rock; the former is the normal practice at Mishongnovi and Orashi, the latter at Shongopovi. No communication with the outer world by a
sticking touching the body and projecting above the ground; and dishes, often filled with food, as well as a few pottery ornaments, are placed by the grave, while a number of geraniums, daughter of what the family belonged. The graveyards are utterly neglected. The faces of children dying before they are able to tell their name are not painted, nor do their foreheads have the cotton cord. Their bodies are thrust into rock-crevices.

On the 3rd day after death the last food- and prayer-offerings are prepared for the dead. The latter consist of a double green blackaba, a single black blackaba (the chokopori, or 'sea'), an eagle-breast feather (the puls, or 'road'), and about six mafiakina (a sort of prayer-bearer). The road' father, brother, or uncle of the deceased places on the ground west of the grave, the thin string pointing westward. From this road he sprinkles a meal the westward Denise the continuation of the road. According to a belief of the Hopi, the hilibr (breast or soul; on which see below, § 52) of the deceased seconds early the next morning from the grave, partakes of the hilibr of the food, mounts the hilibr of the seal, and then travels along the road to the masnii (skull house). Taking the hilibr of the double blackaba along as an offering. In the case of the death of a small child that has not yet learned to talk, the road is made from the grave towards the house of the child's family and is believed that the soul of that child returns to the house of its parents and is received in the next child that is born in that family. Until that time the little soul is believed to hover over the house where it is heard in the house, for instance a croaking in the room, they think that the little soul is present. On the following day the foster-brother often secretly deposits a pinch of food on the floor in some part of the house for her departed child. When I asked one time what because of that child was in case no further birth took place in the family, I was told that in such a case the soul was received into the mother's deceased, who then took the little soul with her to the other world (Voth, FUMAS xi. 101).

6. Religion; general character; ancestor-worship. Hopi religion is broadly characterized by Fewkes (JAFL xi. 180 f., 19 BEBW, 625) as based on a composite totemism overlaid with rites for rain and corn, the two prime necessities of the arid environment. There is also some trace of an form of ancestor-worship in so far as the dead are apparently represented by the ghost-dogs, or crooks, placed about the altar of the Antelope fraternity the shortest being for the oldest, since old age is most highly veneratedindispensable.is the local totemic supervisor of snake-races may have a similar implication (Fewkes, Stephen, and Owens, JAEA iv. 26, 75; Voth, FUMAS iv. iv. 211). Again, at the feast connected with the Namakakina and Namakakina one of the kachinas, who are also associated with the ancestor-cult, collects from the bowls of food given by each woman a pinch of each other in type but not in nature. Three supernaturals, differing in name and personification, appear in a number of mythologies of most Hopi altars. Those three are (a) Sky-god, (b) Earth-god, and (c) Cultus here or heroes. They are personified symbolically and may be represented by a human being, a horned toad, or a picture, or by all of them combined.

An important feature of Hopi mythology is the pairing of entities in man and female, so that the stephen (op. cit., Fewkes, JAEA ii. 153, note) could observe that 'there are numerous dual gods. These are not good and bad, but male and female, as expressing essential completeness. There is no male deity without a corresponding female counterpart, but there are one or two which would seem to indicate that the two were united in one being. . . . In one or two instances two male deities are associated, but each of these has also a corresponding female deity known by the termination 'mili' . . . Inf., on the sun, and his male relative, Tali-ow-a, divide the task of bearing the shining shield across the sky, each carrying it four days alternately. Furthermore, Fewkes suggests (Am., v. 17, note 5) that the Plumed Serpent (Palitukif) is the dualistic counterpart to the earth.

9. Totemism. It has already been observed (above, 6) that the basis of the Hopi religion is totemistic—a totemism which 'has the worship of anthropomorphic parents, male and female, a reverence which amounts to worship of a certain portion of the dead; of beasts or animals as sharing in part a supernatural element possibly due to metamorphosis or the absorption of elements foreign to simple totemism' (Fewkes, JALF xi. 154).

The principle of totemism comes conspicuously to the fore in the famous story of the rainbow; according to Fewkes (19 BEBW, 1088 s.), the presence of snakes...
Hopi

is generally supposed to show that this rite is a form of snake worship. It is in imitation of the worship of the ancestors of the Snake class, which are anthropomorphic beings, called the Snake people, and whose heads are said to be made of the Great Snake, nor has their worship anything to do with that of the bird-men, who were introduced into Hopi mythology and ritual by the Rain-cloud class."

This totemism is also the keynote of the ceremonial washing of the snakes in the kivas before the public celebrations (on this see Fewkes, Am. An. xi. 318-318).

10. Nature-worship. — Like Hopi mythology in general, and like their altars, their conception of the Sky-god is, at least in its present form, composite. The general system of 'Sky-God Personations in Hopi Worship' has been discussed in detail by Fewkes, J. Amer. Eth. Soc. xiv. 14-35. The sun is his shield or masque, 'a visible symbol of the magic power of the Sky-god conceived of as an anthropomorphic being' (14). Ahlta, the Sun-god of the kachinas, returns in the Powantar; and, when Etocito, the Germ-god and the ruler of the underworld, leads these clan-ancestors in their westward departure at the Nimankachina, he can only be deemed the same deity under another aspect (19, 24). Indeed, the kachinas in general are connected with the solar cult. In the bird-men represented in the Soulnakas, we again see a personation of the Sky-god (30 f.); and, when feather designs are found on almost three-quarters of all ancient Hopi decorated ware, while over two-thirds of the animal pendants on pottery represent avian forms, we are here to find yet another mode of representation of the same deity (Fewkes, Am. An. xi. 1-14), and it is for this reason that turkeys and, next to them in importance, eagles (in ancient times probably parrots as well) are kept for their feathers, which are used in the preparation of bakos (on which see Fewkes, Am. An. new series, ii. 600-707). The Plumed Snake (Pallúport, which in the Pallúportklo religious ceremony emerges from sun-symbols and kernel corn, A. A. xvi. 53), with his symbolic field of maize, is a representation of the Sky-god wailing the lightning (Fewkes, J. Amer. Eth. Soc. xiv. 28); and the Bird-Snake personation in the Soulnakas at Walpi represents the return of the Sun-god (28), for

's the serpent representing the lightning, one attribute of the Sky-god, and the bird, another; combined we have the Bird-serpent, the great old god of those Hopi clans whose ancestors once lived in the 'far south' (i.e. Palawakwa) (31).

An extremely interesting cult in this connexion is that of the Aloska, the ancestors of the Aalita ('Horn-Men'), who, in their personations—especially at Mispahongriv, where the cult was introduced by the Paiute, the founders of the pueblo—wear close-fitting wicker caps bearing large curved projections of buckskin, painted white, and re-sembling the horns of the mountain sheep, which the Paiute imitate in some of their actions. In Walpi the cult survives in the ceremonies of the Leñkapí, Witítčimit, and Soulnakas (see Fewkes, Am. An. new series, i. 624). Like the other horned gods, Aalita, Calako, Tewtāw, and, with Natsaka — the Aloska are intimately connected with the sun. At the same time, they represent the mountains, their peaks, and their cult is a highly modified form of animal totemism, while the purpose of the rites performed in this cult is the germination and growth of seeds—particularly maize — and the bringing of rain.

11. Sacrifice and prayer. — Reference has been made above (§ 6) to cases of sacrifice to the dead; but the most important form of Hopi sacrifice is that to the dead. At many feasts the first morsel is taken by the head priest and set on one side, probably as a sacrifice (Fewkes, J. Amer. Eth. Soc. xiv. 29) for, above, returning to the pueblo, a stick or stone is thrown on a pile of such objects, especially at shrines of Massañ, the god of the underworld (Fewkes, J. Amer. Eth. Soc. xiv. 195, J. Amer. Eth. Soc. iv. 41, note 1); for whom bits of food are placed in the rafters of the houses, that he may not hasten the departure of any of the family to the underworld (Minderleit, 3 B.B.W., 102); the 'prayer-meal,' which is so important throughout Hopi ritual, is also to be considered a form of sacrifice, as is the bake, which is presently to be noted (Fewkes, J. Amer. Eth. Soc. xiv. 29), the personal Fewkes witnessed a dog sacrifice at Silhumonvi; and certain details in the treatment of rabbits after their death in the ceremonial rabbit-hunts may point to a former system of animal sacrifice. At the present time such sacrifices are rare; and, if it does occur, its type is highly modified (46-189). It is also noteworthy that the Hopi have a tradition of human sacrifices in connection with their deluge legend.

An interesting object, which seems to be the medium between sacrifice and prayer, is the bake, or 'prayer-stick,' which bears the prayers to the deities. These 'prayer-sticks' are not confined to the Hopi, but are found also among the Navaho and Apache, with analogues among many other stocks (Hough, H. Ai. ii. 304; Solberg, A. A. xxiii. 73). These bakes, which range from a few cm. to 3 m. in length, are ordinarily double, 'male' and 'female,' bound together, and are made of sprigs of various sorts of willow and cottonwood trees, being adorned with pine needles, eagle feathers, etc., and painted in various colors. They are prepared with fasting and other purifications, but are seldom made for the personal advantage of their manufacturer, being rather for others (cf., for example, above, § 33); the personal prayer-bearer, or nakźvëwës, being somewhat similar; after they have been used, their sanctity is at an end. The bakes are placed in clefts in the rocks, in sacred spots and shrines, usually in honour of specific deities or by special societies, and on certain ceremonial occasions. While they are being made or set in place, prayers are murmured over them, and, in their symbolism of colour, components, etc., the Hopi see a medium between him who prays and his god, so that they are a strengthening of the verbal prayer of the bearer of the petition in permanent form (Solberg, 56-59).

Like the prayer meal, the bakes are regarded by Fewkes (16 B.B.W., 29) and J. Amer. Eth. Soc. ii. 50, note 3) as 'sacrifice by symbolic substitution'; and he continues:

's offerings of corn or meal would be natural among an agricultural people like the Hopi. Substitutes for human sacrifices to the gods were sometimes made by the Atece in the form of dough images, so that the method of substituting symbolic products for the real in Europe, was not unknown in America (see, further, B.B.W. ii. 694). . . . In these days sacrifices have come to be a symbolic substitute of products of the field—corn, flour, or bakes—still retaining, however, the names 'male' and 'female,' and with a human face painted on one end of the prayer-stick. The snake-heads are also to be regarded, according to Fewkes (loc. cit.), as true bakes.

Yet another form of substitutitional sacrifice is seen by Fewkes (J. Amer. Eth. Soc. xiv. 193) in the rizas, or dolls, which, carved especially at the Powantar, Papúlkut̄, and Nimankachsina, and presented to the little girls, are 'simulacra of the gods,'

'... the pine needles are brought from the San Francisco Mountains; certain seeds from the region south of Huwa'vapul (100-110 miles from Walpi); cohews from Tewka (several days distant); and the flavoring materials—red henna and green malachite—often from the Huwa'vapul (N. W. Arizona), etc. On the plains of Heneolithic, Shëwëwë, and Shëwëwë, Fewkes (Am. An. iv. 685-697) found Pacific coast shells, such as Potamose and the Nimpahéchins, and winged eagle bones are used in many ceremonies (Voth, J. Mus. Am. xi. 106 f.).'
and are analogous to the dough images of the Aztecs.

As a single example of the many verbal Hopi prayers may be cited the following, used at the Snake and Flute ceremonies and recorded by Davy M. D. B. M. (Feg. 215. 11. note 5).

"We joyfully and courageously go through a ceremony here. May the clouds from the four world quarters have play on us. May they nourish our fields and our crops, and then the corn, quickly bearing seeds, our children will eat; and they being sown, we shall also eat and be satisfied, and then after that shall mature and we shall gather it in and put it in our houses, and after that we shall eat and live on it. Therefore we are happy, and being strong shall perform this ceremony."

11. Purification. - Ritual purity is as necessary to the Hopi as to any other people. Before many ceremonies attendance is obligatory. At the conclusion of some ceremonies, particularly the Snake ceremony, before there can be a return to the ordinary mode of life, it is requisite to remove all that has been associated with the individual during the sacred period, this being accomplished by the taking of a strong emetic. It must also be noted that expectoration forms a portion of a number of rites, apparently with a religious signification (Feg. J. A. E. II. 78, 82, 93, 103).

12. Symbolism and imitation. - Symbolism, here a side of sympathetic magic (see above, § 7), runs through all Hopi ritual. The connexion of feathers with the sun has already been noted (above, § 10). Passing mention may be made of the representation of lightning by the snake (see above, § 10), as well as of the numerous rain-cloud symbols, such as the terraced forms found on many of the kachina masques, and the rich symbolism of the altar. To give a full account of Hopi symbolism would practically be synomous with detailing the entire ceremonial system of this people (cf. Feg. J. A. E. VII. 9-26).

As a single concrete example of Hopi symbolism we may cite that of the sipooph, the representation, in the floor of the kiva, of the aperture through which mankind reached the surface of the earth. According to Mingeffer (Feg. B. B. W. 130) -

"The sipooph, with its cavity beneath the floor, is certainly regarded as indicating the place of beginning, the lowest house under the earth, the abode of Mitina, the Creator; the main or lower floor represents the second stage; and the elevated second floor is made to denote the third stage, where animals were created. Mr. Stephen observed, at the New Year's festivals, that animal fetishes were set in groups upon this platform. It is also to be noted that the ladder leading to the surface is invariably made of pine, and always rests upon the platform upon the lower floor, and in their traditional geneses it is stated that the people climbed from the third house (stages) by a ladder of pine, and through such an opening as the kiva hatchway; only most of the stories indicate that the people were made in the kiva hatchway. The outer world is the fourth world, or that now occupied."

Symbolism likewise attaches to the cardinal points, of which the Hopi recognize six: north, west, south, east (in the order named), above, and below. The north really lies between the true north and west, being determined at Tusayan by the notch on the horizon from which the sun sets in the summer solstice; the second (west) by the setting in the winter; the third by its rising in winter; the fourth by its rising in summer; the fifth by the center of the kiva, on which are placed two cardinals having its own symbolic color: north, yellow; west, blue; south, red; east, white; above, all color; below, black (Feg. V. 82).

A remarkable feature of Hopi ceremonial is the first-person address (sipuq, ch. i. ev.) performed sinistrally-north, west, south, east. This extremely curious phenomenon has been studied by Feg. J. A. E. VII. 33-42, his conclusion being that the north forms the initial point because, according to Hopi tradition, the sipooph of the creation legend is far away to the north, whence even those in the sipooph, in the Indian mind, with the stones through which individuals are born (Feg. J. A. E. III. 56).

The type of the fingers of the outstretched hand (Through, in Feg. L 1701 ff.). As is shown by the accompanying cut, the bull-roarer is from a Hopi painting of the Tewa type, having a terraced top to represent rain-clouds and bearing the lightning-snakcs (see Feg. 21 B. W. 1, plates III. XXXX. 141, 218, 118, 117, 116).

The games of the Hopi have been fully considered by Culin, in his 'Games of the N. Amer. Indians' (n. 42 to his Pref. 1907), among them being archery (300), ball race (689, 678 f.), bean shooter (760), buzz (755), cat's cradle (774); said by the Zeffi to have been taught by the Spider woman to her children, the War Gods (n. 797), war dance (160-165), double ball (649), hidden ball (337-339), hoop and pole (466-468), races (807), skinny hop (833-835), stills (781), tope (743). At least some of these games are regarded by Culin as possessing a religious connotation, as ball race (686), double ball (649), hidden ball (337-339), and hoop and pole (466-468); cf. also 54, 433, 441.

Among the Hopi games mention should also be made of a children's dance, called wakiksina, or 'we-go-thriving dances,' from the fact that pigeon knots are tossed to the spectators at its close. It is a secular imitation of the kachina dance, and, when observed by Feg. on 16 Jan. 1900 (A. M. D. IV. 609 f.; cf. B. B. W. 50), was performed by about 15 boys and girls, wearing ceremonial kilts and blankets, with painted bodies and with feathers in their hair, but without masks. The little girls play with flowers, or dolls, which are generally made by the participants in the Pomegranate, Palmilukkoti, and Nimankachina, but which possess no religious significance of value (Feg. A. S. VII. 46-74).

15. Anthropology and ethnology. - The theological anthropology of the Hopis is thus described by Feg. (A. M. D. IV. 111).

"The modern Hopis recognize in man a double nature, corresponding to body and soul, and to the latter they are said to give the expressive name kisvur, or breath, in which he partakes with organic and inorganic natures, and it likewise forms an essential part of objects of human manufacture. The figure which is so constant and prominent on altars have breath-bodies, and it is this essence, not the idol, which is worshipped. The prayer-bearer, or palo, has likewise a breath-body, and this is the essential part of the offering taken from the dead by the god to whom it is addressed. The material stick remains in the shrine; the supernatural is taken by the God. It is the breath-body or breath which passes at death through the sipooph, or gateway, to the underworld, the place of its genesis before it was embodied as well as the post-mortem home. In this future abode, in its cultus of the dead, these spirits or souls are the sepulchrs in the cultus which they followed on earth. Even the different religious rituals perform there much the same rites as in the upper-world, but minus the movements and rituals of the living."

1 The place of emergence was the Grand Canyon of the Colorado, whence also came the wife of the sun, who went to the east (Feg. A. M. D. IV. 4. 5).
HOPI

with more repertend paraphernalia, the magnificence of which is correlated with the imagination of the priest who may tell you of them.

The best summary of Hopi concepts of the future life is that of Voth (Forsch. xi. 98):

"The future world is a place of eternal existence. When a person dies, his soul is absorbed into the body of the dead and is thus transported to the future world. In the future world, the soul will live eternally, and will be able to communicate and interact with other souls."

With regard to the under world (mazdzi, or 'skeleton house'), it is believed by the Hopi that the seasons are reversed—when it is summer above, it is winter below. This belief is supported by the fact that there are five summer months named after those of the winter in the culture, with special emphasis on the five summer months (May, June, July, August, September).

HORACE.

—In the lifetime of Horace (65-8 B.C.), a vast change took place in the Roman world.

If he had been in Rome at the time—but he was at Athens— he might have listened to the Philippics of Cicero, as a young man of twenty-one or twenty-two. It is probable that Augustus had not only secured his own monarchical power, but was determined to provide for the succession to what was virtually a throne. In his manual, the boy god, it is fairly clear that the prevailing creed of educated Romans was Epicureanism. Lucretius had expounded with force and fervour the theory which denied all intervention of the gods in human affairs, and constructed the universe as an aggregate of material atoms acting under mechanical laws; and, long before, a speaker in a tragedy of Ennius had put in an epigrammatic form: "That the gods exist I hold and shall continue to hold, but I deny that they are concerned with human affairs any more than the stars. I shall go well with the gods, ill with the wicked,—but it is not so in the world I know." (Talamo, frag. 1, Ribbeck.) In a time of disintegration and civil commotions, that was a bold exposition to utter shipwreck, it was natural for men to think that the gods were careless of the welfare of Rome; just as, in a later day, the mob of the city is said to have stoned the temples when the news came of the death of Germansicus (Suet. Calig. 5). When Augustus restored peace and prosperity, it was possible to believe in Providence once more, and the new government made a deliberate attempt to revive the old religion of Rome; temples were rebuilt, and old ceremonies revived with unheard of splendour. According to Dio Cassius (III. 20), Augustus advised Augustus to practise and encourage religion, but to set his face against foreign superstition. The advice is characteristic of Horace's faculties; and, according to the strict contexts in his nature. An indolent voluptuary at most times, he could on occasion display the greatest energy and skill. According to his own literary tastes, he made no error in selecting for encouragement the really great writers of the time; interested in astrology, and perhaps ascribing his recovery to the influence of the planet Jupiter (Hor. Odes, II. xvii. 22 f.), he dissuaded Augustus from showing any favour to the Oriental creeds and rites which had already made considerable inroads at Rome. The revival of the old religion was undertaken by the Fire College. The new government had to seek stability in continuity with the past, and political institutions at Rome were closely bound up with ancient rites and ceremonies. Augustus made no attempt to subdue the mass of the people and to conciliate the restless of the rising poets; and he must have been especially gratified by the 'Invocation of Horace' who had fought at Philippi under Brutus and Cassius. Horace was a later and more reluctant convert than Virgil.

Epicureanism still had its disciples, though it was no longer, perhaps, professed quite so openly. It has been remarked that the Augustan poets make a reference to name Lucretius or extol him directly. Virgil, extolling the knowledge of nature and the defiance of death that it brings, uses a phrase which shows us that he is thinking of Lucretius (Georg. II. 692, 'et animus Aeneidae avari');—Lucretius had spoken of the 'metamorphoses'. Horace, on his journey to Brundisium with Macedonias, is asked to believe that inceses takes fire spontaneously on the tail of a scorpion: he refuses to do so, and uses words that belong to Lucretius, 'deos didicis asercum aequus aevum' (Sat. i. v. 101). In saying 'didicis', Horace almost professes himself a disciple of the epicurean poet; and it can hardly be doubted that Epicureanism was his prevailing belief, though he interested himself at times in the religion of his country. Probably Macedonias and he were as free from superstition as any two men of their time. Their ideal of life was progress towards the tranquillity and quiet enjoyment of nature. 'In rage of avian, you say, Well, but have all the other vices taken their departure too? Meaningless ambition! The fear of death! Anger! Dreams, the terrors of magic, miracles, witches, ghosts by night, and Thessalian portents,—have you a smile for them all? Do you count up your birthdays? Are you forgetting your friends? Do you grow kindlier and better with advancing years?' (Bopp. II. ii. 206 f.). Horace had dealt scathingly with the sorceries of Canidia in the Epodes (v. and xiv.); and in an early Odes (v. vii.). Spiritual or unseen powers seem to have little place in his creed. He is a man of the world, who has arrived at some measure of mental tranquillity by the help of Epicurus.

In the Natures and Epistles, Horace speaks in a familiar tone, as to a friend or friends. He does so, too, in many of the Odes; but some of the latter are much more public and formal in character. He is addressing his countrymen generally, as the lyric poet of Rome (Odes, IV. iii. 25); and here we find him lending his support to the revival of the old religion. It was neglected of the gods that brought trouble upon Italy (Odes, III. vi.), and only the restoration of the goddess brought its continuance. He goes far in the direction of deifying Augustus,—he imagines him seated among the gods and 'guzzling the cup of nectar with glowing lips' (Odes, III. iii. 11 f.),—further, perhaps, than Augustus himself would quite approve; for, as far as Rome itself was concerned, he does not appear to have consented to more than the association of his genius with the street-religion of the roads. In the Carmina Sacra, Horace is the official poet of the State: that he was definitely commissioned to write a choric hymn has been confirmed by the record of the celebration found on stone: GARMUS COMPOSITUS HORATIVS FLAVIVS. Here in carefully chosen phrase he exalts the deities of the festival and the deities in whom Augustus professed a special interest. Apollo was
his chosen guardian, who appears with his bow in Virgil’s picture of the battle of Astii (Aen. viii. 242). The Palatine temple with its sacred pool had been dedicated ten years before. Diana is, of course, associated with Apollo. Diana as Iliob, the Parcae (l. 28), and Tellus (l. 29) have been seen with horses during one of the nights of the festival. Venus genetrix, the ancestress of the Julian house, is not forgotten (l. 50), and Jupiter Capitolinus appears as sovereign of the gods in the closing stanzas (l. 78). It seems a curious anticipation of the future that special honour is paid to the sun (l. 9 ff.), when we recall the importance which the worship of Minerva was to assume in the third century of the Empire. Poetry was not the only art enlisted in the service of the new government. The Ideas of the Carmen Saeculare are found also expressed in stone: on the breastplate of the great statue of Augustus, found on the site of Livia’s Villa, we again meet with Apollo and Artemis, the rising sun climbing the sky in his chariot and the resuscitated figure of the fruitful earth.

There is, no doubt, a considerable difference between the satirical writings of Horace and his more formal lyric compositions. In the former we have seen him deny the activity of the gods; in one of the latter he professes to have been converted from this ‘insane opinion’ when he heard the thunder roll and saw the lightning flash in a cloudless sky (Odys. i. 335). Such a declaration may have been expected from the lyric poet of the new age. But as far as the old religion of Rome is concerned, we must beware of charging Horace with gross inconsistency or hypocrisy; to do so is to some extent to misunderstand the nature of that religion. The religion of Numa was not dogmatic: it made but small claim upon the belief or faith of its votaries; it asked for no demonstration of its truth. It was a system of ceremonies intended to propitiate certain unseen powers, whatever their precise nature might be. If they existed, they might influence the fortunes of Rome for good or evil; to continue their rites was at least prudent, and it was prompted by patriotism and veneration for ancient institutions. Such a religion probably had not lost its hold upon Italy to the extent we are apt to suppose; to revive it was not so very artificial and unreal an effort, nor did it involve any gross mental or spiritual change in the revival or acquiesced in it. See art. ROMAN RELIGION (Fourth Period).

HORSE ('sæs' 'seasons').—In the development of Greek religion man's interests and emotions were focused first upon the earth as the source of his food, and then upon the heavenly bodies as the controllers of earth's fertility and seasonal changes.

1 In analyzing a god we must look for traits from earth, from ‘weather,’ from moon, from sun (J. E. Harrison, Themis, p. 392). So the Horse as weather-deities were preceded by a form or aspect in which they were the seasoners of earth's fertility. In the decay and mutual shifting of these primitive ideas and types, partly also from the very nature of religious ideas, the tensions of emphasis and over-precision are hard to avoid, and the analysis here made for the sake of clearness must not be mistaken for a historical evolution.

2. The Horse as Nature-deities.—Primarily the Horse were Nature-powers, controlling earth's ferti-

Depth perception is disabled for this document.
Horn and Moire are agents of the will of Zeus.  

5. **The Moon and the Seasons**: The Moon is closely connected to the seasons. Its phases are linked to the different months of the year, with the full moon representing the summer months and the new moon representing the winter months. This connection is reflected in various mythologies and calendars. The lunar cycle is a significant concept in many cultures, influencing agricultural practices and religious observances. The Moon's phases are often associated with the growth and decay of plants, symbolizing the cyclical nature of life.

6. **The Sun and the Seasons**: The Sun is the source of life and growth, associated with the summer season. It represents the power of creation and is often linked to fertility and abundance. The Sun's journey across the sky is mirrored in the seasons and is a symbol of the continuous cycle of life and death. The Sun is often depicted as a protector and provider, ensuring the sustenance of all living things.

7. **The Concept of Time**: The cycles of the Moon and the Sun are fundamental in understanding the passage of time. These celestial bodies are used in calendars to mark the passage of days, weeks, months, and years. The cyclical nature of these cycles is a reflection of the cyclical nature of life, emphasizing the importance of preserving tradition and wisdom for future generations.

8. **The Role of the Seasons in Mythology**: The seasons are often depicted as characters in myths, each with distinct attributes and symbols. Spring, for example, might be associated with renewal and fertility, while autumn signifies the harvest and bountiful gifts. These symbolic representations are integral to the narrative of mythological tales, serving to teach important lessons about the human condition and the cyclical nature of life.

9. **The Influence of the Seasons on Art and Culture**: Throughout history, the seasons have been a source of inspiration for artists and writers. They have been used to convey emotions, ideas, and themes, from the beauty of spring to the melancholy of winter. The cyclical nature of the seasons is a recurring motif in literature, painting, and music, reflecting the timeless human experience of the passage of time.

10. **The Seasonal Cycle in Daily Life**: The cyclical nature of the seasons is reflected in the daily activities of humans. From the agricultural cycles of planting and harvesting to the ritual cycles of festivals and celebrations, the seasons play a crucial role in shaping daily life and cultural practices. Understanding the cyclical nature of the seasons is essential for the well-being of communities and individuals, guiding their actions and decisions throughout the year.
Horns by animals possessing them. These reasons will appear more clearly after certain facts regarding the place which horns hold if representations of divinities have been reviewed.

1. Divinities with horns.—In many religions, especially in those of antiquity, divinities are frequently represented in staid or image or picture as wearing the horns of an animal on the head, or this characteristic is referred to in myths. In Babylonia the higher gods and godesses often wore head-dress with a double pair of horns surrounding the sides and front. Nin-tu, a form of the goddess Māh, is depicted with a horn on her head. Ramman is represented with four horns (see Gilgameš, v. 1., p. 241). Hittite deities also wore caps ornamented with several pairs of horns, probably those of a bull, as in the sculptures found at Ibrîs, Carcæmĭth, and elsewhere. Melkarth of Tyre was represented as an almost bestial god with two short horns on his head, and the Syrian Hadad has similar horns. Phoenician goddesses usually have the horns of a cow, like Ashtaroth-Qarnain, of the two horns, but these may be borrowed from the Egyptian Hathor, identified with 'Ashartak. Hathor, with whom the cow was identified, is depicted with a cow's head and horns, or merely with horns. Isis was assimilated to her, and cows were sacred to this goddess. Her usual ornament was a pair of horns with the solar or lunar disk between, but sometimes, as the female counterpart of the Ram of Mendes, she wore ram's horns. Ra has sometimes the head with ram's horns, Osiris sometimes a crown with horns, and Nepthys has also the horns and disk. Kephis has a ram's head with horns, curving or long and projecting. The god Dżeft of Ugarit was represented as a single horn, possibly the rudder of his boat. From it project the horns of a cow. In Greece, Dionysos, one of whose forms was that of the bull, was called the 'horned,' or 'bull-horned,' and many old bas-reliefs with his head and pteres, or horns, a horned infant. Pan and the satyrs showed traces of their goat origin in the goat horns with which they were depicted. Rivers were personified by divinities with horns or a bull's head, e.g. Achelous (g.v.) and others on coins. Ocean also had a bull's head. Some horned divinities may have been represented with horns through Egyptian influence, e.g. Io (equated with Isis), whom myth declared to have been changed into a cow by Hera, and with whom Hera was sometimes identified. Both goddesses of the Cow. The Guine had a god of the under world with horns, called Cermnoes (perhaps = 'the horned,' from *corne, 'horn'); and a group of nameless gods, some with stage horns, have affinities with him. Some goddesses also have horns. In India the sharp horns of Brāhmamaṇi-pati are referred to in a hymn, and the horns of Agni, who is sometimes characterized as a bull, are also mentioned. Yama, in Buddhist mythology, has horns. Northern Buddhists (Tibet) have also images of horned divinities in temples, and Mahāyāna (= Yama) wear a pair of horns. In the lower culture, gods sometimes have horns. A carving from a temple in Fiji shows such a god, and many examples are also found among the American Indians.

In many of these instances there can be no doubt that the horns worn by the gods are the relic of their earlier animal forms. Earlier worshipful animals became anthropomorphic; or, again, a worshipful animal was incorporated with a god, and art retained for the god some part of the animal—head, or pelt, or hoofs, or limbs, or, in this case, the horns. But these last we have horns like those of the unicorn, with which he will push the peoples. Early Egyptian monuments depict a huge bull destroying the walls of town or fortress, or piercing old Europeans with his horns, a horned infant. Pan and the satyrs showed traces of their goat origin in the goat horns with which they were depicted. Rivers were personified by divinities with horns or a bull's head, e.g. Achelous (g.v.) and others on coins. Ocean also had a bull's head. Some horned divinities may have been represented with horns through Egyptian influence, e.g. Io (equated with Isis), whom myth declared to have been changed into a cow by Hera, and with whom Hera was sometimes identified. Both goddesses of the Cow. The Guine had a god of the under world with horns, called Cermnoes (perhaps = 'the horned,' from *corne, 'horn'); and a group of nameless gods, some with stage horns, have affinities with him. Some goddesses also have horns. In India the sharp horns of Brāhmamaṇi-pati are referred to in a hymn, and the horns of Agni, who is sometimes characterized as a bull, are also mentioned. Yama, in Buddhist mythology, has horns. Northern Buddhists (Tibet) have also images of horned divinities in temples, and Mahāyāna (= Yama) wears a pair of horns. In the lower culture, gods sometimes have horns. A carving from a temple in Fiji shows such a god, and many examples are also found among the American Indians.

kings and their power, and in En. 90-a: a lamb with horns signifies Judas Maccabeus, and other horned lambs the Maccabees.

It is obvious that the addition of horns to the image or representation of a god might symbolize his divine power apart from his being related to any earlier animal-god. This is analogous to the addition of a pair of horned animal-gods—the triple-horned divine bull or boar of the Celts, or the three-antlered stag of a Pagan story—or the giving of a horn to an animal which naturally does not possess it, e.g. the serpent, as in the case of a horned serpent on a Gattish altar, the Thracian horned snake Zagreus, and the similar horned snake in American Indian legend.

Some moon divinities were represented with a crescent moon on their heads or were symbolized by it. This crescent bears a certain resemblance to a pair of horns, the likeness being occasionally emphasized, and there was a tendency to confuse the crescent moon on the divinity’s head with horns. This is seen, e.g., in the case of the Jb. moon-god Sin, the Greek Io, and the Egyptian Isis. But there is no clear reason for supposing that the crescent moon is the origin of all horns as applied to divinities.

2. Semi-divine and demonic beings with horns.

—Nothing is more usual than to find various beings of a semi-divine, half-demonic character invested with horns. The fauns and satyrs of Greek mythology are an example of this, and more or less corresponding to these are the Russian wood-spirits, or Perun, with goat-horns. These may be regarded as later anthropomorphic forms of earlier woodland spirits conceived as goat-horns. But demonology attributed to many of the monstrous demonic beings pair already possessed by demons, e.g. a sea-monster with the ears of a basilisk and horns twisted into three curls, while the demon of a poem story, or the giving of a horn to a goat, should be noted that Ex-bani has goat-horns as well as other animal features. In ancient Persia the conglomeration of animal representations of demons were often horned, though here the figure of a good genius is also horned. Hebrew and later Jewish demonology had similar creatures—see instances, perhaps, the semi-divine beings of the surrounding pagan transformation into demons, e.g. the ‘Seraph of Lv 177, 2 Ch 11, is a dragon, 364, probably horned beings akin to the Greek satyrs and, like them, of goat origin. There was a demon called Kebab Merihi with the head of a calf and a revolving horn; and an ox-like demon dwelling in desolate places. Hindu and Buddhist demonology and belief also know horned demons; and the Japanese oni are frequently seen in human form but with bull’s horns. Demons in later Sia often have horns; but this is a conception which is common to Christian demonology in general, as a glance at medieval and later pictures of hell or of demonic or witch orgies will show. Invariably also the devil presented himself to popular imagination with horns, goat-like face, hoofs, and tail. In both cases we have here a reminiscence of horned demi-gods—Pan, the satyrs and fauns, the Celts 45—46 and, of all whom, as far as they existed in folk-memory, a demoniac form was given. Grimm, however, connects the goat-like form of the devil with the goat which was the sacred animal of Donar, 'whom the modern nations of the Devil so often have in the background.'

Thus, while, in some instances, horned spirits or demons derive from earlier animal-gods or are earlier anthropomorphic horned beings transformed to demoniac shape through the influence of a new religion, in others, horns seem to have been deliberately given along with other bizarre attributes, in order to intensify their monstrous and awe-inspiring aspect.

3. Horned men—Horned head-dresses were frequently worn by certain persons. Kings sometimes wore such head-dresses, probably because they were regarded as incarnations or representatives of horned gods, or simply as an emblem of their power. Part of the head-dress of an Egyptian king consisted of horns, like those attributed to Osiris. 46 Bab. and Assy. kings wore rounded caps with parallel horns encircling them from behind, and curving upwards towards the front without meeting. These resembled the head-dresses of the gods.

Ortel relates a curious story which shows how horns were regarded as a symbol of kingship. Opposite the thron, looking at his reflection in water, saw that horns were on his head and then found that they were actually there. Anxious to know what this portent meant, he offered sacrifices, and was, after inspecting the entrails and seeing the horns, addressed him as future king. Rather than consent to be king, he desired sentence of banishment; but, though this was granted to him, he paid for his horns, so that he could wear them, his horns being seen by his own subjects. 48

In paintings and statuary, Moses was often represented with horns. This is usually referred to the text of Ex 34, where it is said 'the skin of his face shone.' Horae of horns is here taken to mean 'beams of light,' but not improbably there is a textual error (Ex 34, 29, s. Horn). Aquila and the Vulgate translated the text 'quod cornuta aedificavit sua,' and thus the legend grew. But it may have been influenced by that of Alexander as well as by the Bab. and Egypt. representations of horned gods.

Among some savage peoples, horns occasionally form part of the insignia of chiefs. This custom is found among the American Indians, the horns being sometimes still attached to the animal's skin, which covers the head, or they may be made of metal. Priests and medicine-men sometimes wear horns—either as identifying them with some horned god, or because of some magical power attributed to the horns, or as a symbol of office. This is found among savage tribes, and it was a custom of the priests of Babylonia. Again, the horn decoration may be worn by the men of a tribe or by its warriors, as among the Amund, where the men wear horns as part of their head-dress.

The wearing of horned helmets may have been derived from an earlier custom of wearing a head-dress composed of the skin of the head with the horns of an animal, but the horns on the helmet were probably also intended to have some apotropaic forces in face of danger. The Sardinians are represented on Mounts Mennoengian caskets. Such helmets were also in use among the Ituruanas, Romans, and Greeks, as is evident.

shown by examples which have been discovered as well as by designs on coins. They were also worn by the Celts and certain Saxon vessels which have been found have large curving horns elaborately ornamented. Similar horned helmets are figured on the Gundestrup cauldron, and some Anglo-Saxon helmets were horned.

Mimeic dances, usually for the purpose of securing luck in hunting, are found among savages, e.g. the American Indians; men disguise themselves with the skin and horns of the animal to be hunted. In Germany and in Gaul, during the Kalends of January, riotous processions of men masquerading in a similar manner took place, and, continuing in Christian times, were vigorously combated by the Church. These had probably some connexion with the earlier animal-subs of Celts and Germans. In different parts of England, e.g. in Staffordshire, and sporadically elsewhere, masquerade dances of men wearing deer-horns, etc., occur periodically. Thus at Bromley six men carry reindeer-horns, and dance through the town. The horns are kept in the church tower. Whether these are connected with the older practice just referred to, or, whether, as is alleged, they represent a custom connected with an animal privilege of the custode silviris, is uncertain. In Bulgaria at carnival time the locals in a masquerade wear masks combining, e.g. a man's head and an animal's horns. Elsewhere—in Hungary, Bohemia, Sweden—the human representative of the corn spirit in animal form wears a goat's or cow's horns; and the grotesque masks worn by savages on ceremonial occasions often have horns attached to them.

The horncrest, used of a husband whose wife has been unfaithful to him, 'to give horns to,' or 'to get or plant horns on' (Fr. porter les cornes, corseau; Germ. erraticieren) suggests a connection with the horns of a male stag. This is also the case with the horns of a stag; the horns of a stag with the words 'to make or put horns on' (Fr. faire les cornes à; It. far le corna de). It was an old custom, when a wife was wrongly accused, for the husband to be dragged in procession wearing an oil cloth, or for the wife to carry his horned effigy. Brand cites many suggested explanations of the phrase 'to give horns to,' none of them satisfactory. Donges finds the origin of the old custom of engraving the name of a condemned person on a vacant tomb. On the same tomb is engraved the name of the dead person, with the exclamation, 'beware, beware!' The present use was as common to women as to husbands, who have been the subject of popular jests in all ages. It is possible that this custom might pass to the other phrase 'to give horns to,' as among the Goths. It is said that in Spain it is a custom to put up horns against a neighbour's house.

4. Magical aspects of horns.—Any part of a sacred or sacrificial animal tends to be regarded as possessing the virtues of the whole. This is especially true of the horns, a comparatively indestructible part; and, as they are an adjunct of the skull or head, are particularly regarded as possessing the spirit, the vital forces of the animal acting through it, and for this reason are worn as a charm to avert evil. The horns are said to be efficacious against scorpions, serpents, and evil omens in general. They are also worn to avert the evil eye, and are probably regarded as possessing the virtues of the whole animal. The power attributed to them is thus intensified. Hence the horns of any animal, whether sacred or not, are worn as a charm to avert evil. Certain animals, e.g. the bull, bear, and porcupine, are particularly regarded as possessing these virtues.

The Greek and Roman custom of placing the head of the sacrificial ox over the door of a house to ward off evil—fouwad, beuošeis—is a case in point. Cows' horns were hung up on the temple of Diana on the Aventine, and deer-horns on other temples of Diana, while horns were a common adjunct of shrines and altars. Cows' horns are frequently placed over doorways of dwellings, stables, or cowhouses in Italy and Germany; and in Asia Minor, India, Persia, among the Arabs, the horns of stags, oxen, wild goats, or rams are often seen in a similar position. The custom is not unknown in England, but at Horn Church, Essex, the horns fastened over the east part of the church are of lead. Horns of oxen are placed on gables of houses in Sumatra; and in Tibet a ram's skull and horns protect doorways. Horns may have been similarly used in pre-historic times.

(b) Horns of the altar.—Hebrew altars had projections at each corner called 'horns of the altar,' and upon them was placed the rams of consecration of priests and at the sin-offering was sprinkled. The altar being a sanctuary for the criminal, it was customary for him to take hold of the horns. The horns of consecration, found as models, or depicted in cult scenes, consist of a base from which rise two horn-like uprights, curving outwards. They are found on altars, lintels, etc., and are the same as those used in the sacrificial altar at Paphos, and they have also been discovered in Malta. On Greek and on Arabian altars, heads of oxen are fixed upon them—a surrogacy for the actual fouswad, and would tend to become more and more conventional or symbolic. Similar horns have been found crowned models of shrines, and in connexion with pillars, at the sanctuary of Aphrodite at Paphos, and they have also been discovered in Malta. On Greek and on Arabian altars, heads of oxen are fixed upon them—a surrogacy for the actual fouswad. Although various theories have been proposed for the origin of the horns of the altar in Hebrew usage, this probably explains their presence, as W. H. Smith suggested. The same usage of affixing wild sheep's horns to altars is found in Tibet. In Greece, altars made of horns, as at Delphi, were not unknown. Horns are made of the precious metals, coral, amber, etc.

and they are carried on the person or attached to the harness of horses, and the like. Such amulets have been found in Crete, in Etruscan graves, etc., and their use is widespread in the lands around the Mediterranean and in Europe—Spain, Portugal, Italy. 1 The maso cornuata, or horned hand—a gesture in which the index and little finger are pointed outwards, these others being folded under the thumb—is extensively used, and is found also in early Roman, early Christian, and Hindu art, while it was formerly known in Great Britain. It is sometimes enough to utter the word cornu to repel an evil influence. 2 Artificial amulets representing horns or horned heads were used in ancient Egypt. 3 In India the horns of gazelles, antelopes, etc., either in whole or in part, repel sicknesses, and horned amulets are in use against demonic influences, while pieces of horns are still effective asghost-repellers. 4 Horn amulets are also much used in further India, China, and Japan. 5 Among the lower races similar uses of horns are found. In Africa and among the American Indians they are worn as amulets, either in the hair or suspended from the neck, as protectives against sickness or witchcraft. 6 In Sierra Leone, horns are used to repel evil. 7

Horns are placed on graves to protect the dead from evil influences, e.g., in ancient Peru, in Flores, and among the Nuba of the Upper Nile. 8 Among the Bantu of the Congo, ox-horns are suspended from a pole above the spot. 9

Horns ground to powder form an occasional folk-medicine. Among the Indians, a warlock, to placate the spirits of the dead, grinds a piece of horn; and ruminoco-silde in order to obtain the animal’s strength. 10 In Egypt an antidote for poisons is to drink out of a rhinoceros’ horn. 11 In Spain, horns are drunk as a panacea against the evil eye. 12 In Cyprus, etc., a killed male’s horn (perhaps that of the Ceratocornus cornutus) is used for medicinal-magical purposes. It is sometimes thrown over them, whereupon one of them gives up the horn. 13

(c) The cornucopia, ‘horn of plenty,’ a horn filled to overflowing with fruits, etc., was an emblem of gods of plenty. Thus it was associated with the goddess Fortuna (‘Fortuna cum cornu, pomis, frutis, etc.‘), the horns of satyrs, fauns, etc. (‘muendaneum cornucopiam Fortunae gestans’), 14 and with Copa (‘auras fruges Italie pleno diffudit Copia cornu’). 15 But it was also given to the Tri Sita, to Diana, and to the Laro. The Earth-goddess emerging from the earth on Greek vase-paintings has a horn of plenty, from which sometimes rises a child. 16 The name itself, cornucopia, could be associated with any god or personage who aided fertility, e.g., Hekateris (whose cornucopia sometimes contains ἀλεύριον), or any form of the Agrath, Damos, e.g., the hero, in the representations of whose ritual feasts it appears, and also the person who represented the Year in processions, the Eumenides. Thus, in the Dionysos procession arranged by Ptolemy Philadelphus, Eumantos is

daid to carry ‘the gold horn of Amaltheia.’ 17 The cornucopia was, in fact, connected (1) with Amaltheia, the goat from whose horns fruit was presented to the Infant Zeus, 18 and (2) with Aëhelous, from whose head Hekateris had broken it off. Later authors combined these two myths. 19 Probably a horn became symbolic of fruitfulness because it belonged to an animal associated with fertility—bull or goat—and perhaps also because it was a drinking vessel not only among primitive but among civilized peoples. 20 Gods are mythically represented as drinking from horns, or they or other supernatural beings offer their guests drink from a horn. 21 But other things besides drink are carried in such horns, e.g., anointing oil, 22 medicines or fresh staff (a general practice in Africa, and found in India in Vedic times), 23 articles used in charms, incantations, etc. 24 Saxo Grammaticus 25 relates that the image of the god Svantovit in Rügen held a horn; and from the diminution or non-diminution of wine poured into it by the priest an augury was drawn regarding the scantiness or abundance of the crops. Medicine or healing water is often efficacious only when drunk out of a horn, especially one taken from a living animal. 26

For all these reasons it was easy for the horn to become a magical property, a device of good fortune, in general, etc., which it was desirable for men to obtain. Hence many tales of robberies of drinking-horns from fairyland, which attach themselves to various celebrated horns, e.g., that of Olden in Germany. 27 Such drinking-horns may at one time have been used as archaic vessels in pagan rites, in preference to more recent vessels; and a supernatural origin would later tend to be given to them. The stolen horn, sometimes a source of luck, a veritable cornucopia. 28 The cornucopia itself, represented on gem amulets, is said to have magic potency. 29 But, in whatever ways such rich productive power was assigned to horns, this primarily depended on the fact that such power was first attributed to the animals possessing them, the power, not the horns, working, however, through their horns. This conception was sometimes mythically represented, as in the case of the stag Eukhydras, from whose horns water continually trickles down to feed the rivers of the under world, 30 and the Iranian primaz Goban-mar, from whose horns spring fruits.

A parallel to the horn of Amaltheia is found in a Kafir tale, in which a boy has a wonderful ox which produces food from its right horn when it is struck. The ox or the horns are sacred for the Kafirs, but the power still continues. Horned cattle are cherished possessions of the Kafirs. 31 In many Cinderella tales the dead mother, transformed to an animal, produces riches or food from her horn. 32 Of an American Indian tale in which a sorcerer produces marvels with the aid of a reindeer horn.

(d) Horns as musical instruments. —The horn was widely used as a wind instrument among primitive as well as among more advanced peoples, and from it the trumpet, often shaped like a horn, had its origin. 33 Such horns are blown not only for

ordinary but for ritual purposes. But, partly from the powers ascribed to horns in general, partly from the custom of scaring away demons by noise, etc. the blowing of horns became a common method of driving off demons, or of producing magical results. It is a common method of frightening away evil spirits in British Guiana. In cases of sickness the Garo blow horns to drive out the demon which is causing it.4 Blowing of horns, as well as other forms of noise, is used among many peoples as a method of driving off the monster who is supposed to swallow sun or moon at an eclipse. Among the Jews it is thought that the blowing of the shofar is effective in scaring evil spirits or Satan.5 It was also through the blowing of rams' horns (keres) that the walls of Jericho are said to have fallen down.6 

Gods are sometimes said to possess horns, e.g., Truovo who blows 'his breathed horn'; and Hymettus, daughter of the gods who possesses a powerful horn, Goliathorn, kept under a marble tree, and who blows it at the approach of Dactyle.7 

5. Horns in sacrificial and other rites. -Horns are sometimes presented as sacrificial offerings. In Baluchistan ibex or moufollin horns are placed on the shrines of saints as offerings, or to do honour to the saints.8 In Ladakhs rams' horns are fixed on fruit trees as an eclipse, as a prophylactic offering. Such trees are very fruitful.9 Horns of stags were also sometimes offered to Diana, and votive horns were hung on trees.10 Where oxen, etc., were sacrificed, their horns were often gilded, and their necks were garlanded. This was the case in Roman sacrifices, and notices in the Edda and other mythological works of the ninth century show that this was usual in Teutonic sacrifices.11 In later survivals on feast days the horns of oxen are gilded, or adorned with gilted apples or with ribbons around the base, and on the eleventh day of the month the students, from which there is no escape—these cases the danger, or it may be the certainty, of death is the exciting motive of the emotion; but there must also be the element of suddenness of surprise; where the issue has been foreseen, emotion follows quite a different course. A special wise of horror of this type is being suddenly brought into the presence of the supernatural. Horripilans, the hair standing on end, has from time immemorial been associated with the sight of the risen dead, the hearing of a supernal voice, the believed presence of a god, especially an evil god, a devil, demon, phobia, or a human being who has acquired some of their powers, and takes some supernatural shape. Common to all these cases is the real or supposed powerlessness of the individual, whether because of the suddenness of the onset, the conditions of the situation, or the immensity of the force which he has to face— the invulnerable and unlimited power, for example, and unlimited desire to injure, on the part of the evil spirit. The sense of sin, and of the immi- 

ness and thoughtlessness, as the Congo and Putumayo (1812) atrocities, cruelty to children, the 'horror' of a war, etc. There is not only sympathy with the actual sufferers, but also a feeling of outrage done to the human soul, a feeling that the same feeling stands out strongly in another set of cases, the so-called 'unnatural' crimes—matricide and parricide, incest, sexual perversion, cannibalism; the feeling is that of violence done to the human type, the ideal of humanity which each of us, consciously or unconsciously, carries about with him. Probably the same sort of feeling is at the root of the horror, once universally felt, towards the insane, towards witches and sorcerers, etc. When the ideal of humanity includes sainthood among its elements, the same suppressed feeling is taken towards atheism, blasphemy, and, to a less extent, towards heresy. A lower form is the instinctive repulsion felt among the uncivilized towards human deformities—amputated legs, club-foot, dunceness, etc. Thus the diffuse form of horror may be characterized as a humanitarian emotion, its object being mainly actions, features, traits which outrage or violate the ideal of humanity so far as it is developed in the mind of the individual. The specific emotion of horror is more intense, more egoistic, and concerns situations of imminent danger to oneself. The rush of a wild beast of prey, the sudden fall of a support upon which one stands, the death of a child in the arms of the parent from which there is no escape—these cases the danger, or it may be the certainty, of death is the exciting motive of the emotion; but there must also be the element of suddenness of surprise; where the issue has been foreseen, emotion follows quite a different course. A special wise of horror of this type is being suddenly brought into the presence of the supernatural. Horripilans, the hair standing on end, has from time immemorial been associated with the sight of the risen dead, the hearing of a supernal voice, the believed presence of a god, especially an evil god, a devil, demon, phobia, or a human being who has acquired some of their powers, and takes some supernatural shape. Common to all these cases is the real or supposed powerlessness of the individual, whether because of the suddenness of the onset, the conditions of the situation, or the immensity of the force which he has to face—the invulnerable and unlimited power, for example, unlimited desire to injure, on the part of the evil spirit. The sense of sin, and of the immi-

nece, and unerring (as) by fear. In fact the ex- 
pression of horror looks like a spasm of action, an effort so supreme as to throw the mechanism out of gear; sometimes the effort to resist the tremendous resistance to the danger is made; at other times the paralysis extends to a merciful loss of consciousness. In animals, Verwoon1 has shown that the so-called hypnosis or cataleptic state into which frogs, snails, birds, guinea- pigs, rabbits, and other animals fall, when held down in an unusual position, is produced by lassitude of the muscles, arising from the excessive initial

Hospitality (Arabian).—The notion suggested by 'hospitality' with the Arabs, as indeed with all other nations (Pindar, Pyth. iv. 30), is the bestowal of food; to 'entertain' and to 'give food' are synonymous in the Koran (xxiii. 73) as synonyms. The usual word for 'hospitality' (sawāfā / sawāfā) seems to be connected etymologically with a word dawāf, 'crowd of persons sharing a meal,' one that is slightly different in meaning and thought to be connected with garyād, 'village,' and perhaps it is to be explained from the Heb. qārd, 'to meet.' Partaking of food makes the guest a temporary member of the family, and so confers certain rights and duties: when Abraham, immediately on the arrival of the Divine guests, offered them a boiled calf, but found that their hands did not reach to it, he became terrified (Qur'ān xli. 73). The partaking of food, therefore, proves that the intentions of the guest are not hostile, while it also lays on the host the duty of protecting the guest as a member of his own family; ordinarily this relationship is established by the partaking of bread and salt (Doughty, Arabia Deserta, Cambridge, 1898, i. 223). In the case of an ordinary guest the
The hospitality of guests is thought to have started by Abraham (Thaylīṭ, Lālit ḫalīl, 1337, 4). The definition of hospitality in the Qur'an appears to be 'feeding on a hungry day of famine' an orphan who is also a kinman, or a poor man who is in need (sū. 14). The latter act is assigned a high value that, where the code admits exile, it is measured in terms of what the mendicant serves this purpose; the food is to be normal, and the amount specified as a nusūd.

The value in the practice of hospitality has naturally been exaggerated by the Muslim theologians, and in homiletic works some remarkable views are formulated. 'An account will be demanded on the Day of Judgment as to how much each person should have spent except that on the entertainment of guests: God will be ashamed to demand any account thereof' (Qūq al-Qūdah, 1910, II, 182, after ḥasan al-Ḥarrit, t. 110, A.H.): 'to refuse an invitation is to disobey God' (sū. 187); provided that the place where hospitality is offered fulfills certain conditions, e.g. is not adorned with silk or satin, gold or silver vessels, etc. (sū. 190).

Sayings attributed to the Prophet are: 'Hospitality is a right'; 'Hospitality for a night may be claimed'; 'Any area or village wherein a Muslim is allowed to pass a night hungry is out of the pale of Islam'; 'Hospitality is three (days); all above that is charity' (probably meaning 'cannot be demanded').

The Prophet is said to have asserted (p. 268 f.)

In spite of these quotations, the desire to entertain was by no means universal among Muslims, and a whole literature exists in illustration of stinginess; the classical treatise is that by Ḥaḍīṣ of Ḥadār (sect. 22) to perform it. In the Qur'an (sū. 80). Lot appeals to the people of Sodom not to disgrace him in the matter of his guests; he is apparently ready, if compelled, to yield this right in the face of divine authority (sū. 19, 28) (b. 188).

The formula whereby guests are greeted, ḥūṣayn wa-sahāb, wa-masḥuḥūn, probably go back to remote antiquity; the last of these words is the 'width' and 'meat' of the Egyptian ḥūṣa, and the first is said to mean 'you are among your family';

the second is probably a jingle matching the first, but means 'easy.' In modern times the phrases ḥumār, 'you have rendered us at home,' and awūshṭān, 'you have rendered us lonely,' are often heard besides. We sometimes hear of gifts of ḥūṣayn (b. 117) the ideal wife is said to be hospitable to her husband's family; in sū. 117 it is stated to be the duty of a good citizen to treat guests with honour and respect; in ālā'ī, 42 (in the canonical verses), one of the heroes of the tale boasts of the friendly and hospitable reception he always accorded to guests; and in sū. 236 (again in the canonical text, and that his wife is vain who leaves a guest there seated unfed.

These injunctions, or expressions of opinion, are not represented as exclusively Buddhist. In the first passage they are put into the mouth of the Buddha, in the others into the mouths of good men not belonging to the Buddhist community. It is evident that the Buddha adopted current views on the subject, omitting only any reference
to superstitious customs, connected with conceptions of taboo or animistic visions.

3. Hospitality of the Celts to the religious Orders.—When Buddhism arose, there were quite a number of wandering teachers (paññāñādī, 'wanderers') who propagated doctrines as varied as those of the Greek sophists. They were respected by all social grades, though most of them were men of noble birth. It was considered a virtue and a privilege to provide these unfrocked theologians with the few simple necessaries of their wandering life—especially lodging, food, and clothing. Many of the 'wanderers' were organized into communities, with such rules as seemed suitable to the wanderers for the regulation of such bodies of co-religionists. The people supported all alike, though they had their special favourites. The Buddhists adopted this custom, and those among the laity who followed them carried out very willingly the current views as to such hospitality to the 'wanderers.' It was enjoined upon them to give to all. Thus, when Siha, a nobleman who had hitherto followed the Jain doctrine, became a Buddhist, it is specially mentioned that the Buddha urged him to continue, as before, his hospitality to the members of the Jain Order. In the Edicts of the Buddhist emperor Ashoka, frequent mention is made of the duty of hospitality to teachers of all the different sects (not only one's own).

4. Hospitality within the Order.—The 'wanderers' were accustomed on their journeys to stay with one another, and a set of rules was drawn up for their guidance when guests of this kind arrived, prescribing the etiquette to be observed both by the incoming bhikkhu (the disciple) and by his hosts. These regulations are of a simple character, such as might be drawn up now under similar circumstances. They are too long to quote, but have been translated in full by P. Silas, 1 the Oldenberg Vol. III of the Vinaya Texts (SBE xx. 1885) 273-282.

It should be pointed out that all this is considered to belong to the lower morality of the unenlightened; it is taken for granted, and never even referred to in those passages of the books in which the essential doctrines of Buddhism are expounded to the converted. It is really Indian (see HOSPITALITY [Hindu]) rather than Buddhist; though a detailed comparison of the Buddhist doctrine of hospitality with that of other Indian sects would show, that the Buddhists laid more stress than the others did on certain details, e.g. on the importance, in such matters, of disregarding, or paying but little attention to, any differences of sectarian opinion.

LITERATURE.—The authorities are quoted in the article.

T. W. RHYS DAVIDS.

HOSPITALITY (Celtic).—1. Gauls. —It has already been noted in art. ETHICS AND MORALITY (Celtic), vol. v. p. 425, that the Gauls manifested a great desire for knowledge of the habits and customs of foreign peoples, and it is in this eagerness for information that we find the source of the hospitality for which they are so often praised. They welcomed the hards not only because they loved to hear them sing of the deeds of heroes, but also because they delighted in the stories of distant relations made by these travellers. They never refused hospitality to a stranger; and, after having done him the honour of their table, they pressed him with endless questions regarding their neighbours; as Cesar says (de Bell. Galli. iv. 5):

'Quandoqueque post hospitatem Galli, inquit, industrie et lardus etiam invictus consilere cogant et, quid quiceris eorum de quaque natio, qua rerum humanarum legendarum, quae ex alius gentibus, quae ex laude Gallorum, proconsule cogenas.'

1 Vinaya Texts, ii. (SBE xvi. 1883) 115.

Every traveller received warm welcome among the Celto-Iberians, because they considered those who were in the company of strangers as beloved by the gods (G. Duttin, Manuel de l'étude de l'antiquité celtique, Paris, 1906, p. 117). It is needless to observe, therefore, that the statement of Diodorus (iv. 19, v. 24), that the Celts were accustomed to put strangers to death, is merely a fiction.

2. Irish.—The Irish terminology for the relations of hospitality is as follows:

The Irish, too, would entertain their guests with such courtesy that they were called 'the hospitable guests of Ireland' (C. Ó Dáire, in the Placita of 908; Ó Murchadha, in the Book of Houses).

In Ireland, hospitality was not only practised as a virtue, but enjoyed by all from the earliest times, and references to this subject are equally numerous in religious and in secular literature. In the account of the second battle of Maesmor, we find the following statement concerning Ireland in the reign of King Domnall: 'Her inhabitants were hospitable, spacious, and open for company and entertainment, to remove the hunger and gloom of guests' (J. Ó Donovan, 'The Battle of Magh Rath,' Irish Archæol. Soc., Dublin, 1842, p. 106). Beo (SE ii. 27), in writing of the plague of 984, states that many English people fled to Ireland, not only for the nobility and of the lower ranks, but to Ireland at that time either for the sake of study or of continuance. The Irish, continues the chronicler, 'willingly received them all, and took care to supply them with food, as also to furnish them with books to read, and their teaching, without any charge.'

From what is contained in the Ancient Laws of Ireland (London, 1893-7, iv. 257) as well as in the saga, we may conclude that from the very earliest times a king's chief function was to be able to entertain any passing stranger or any other person who might seek his hospitality without asking any questions regarding himself or the purpose of his visit. One who neglected to discharge these duties incurred without fail the hostility of his people. For example, in the account of the second battle of Moytura, the people, says the saga, complained bitterly of the poor hospitality of King Breon:

'the kinsfolk of his people were not graced at his table, nor did their breath smell of ale at the banquet. Neither their poet, nor their bard, nor their satirist, nor their harper, nor their pipers, nor their trumpeters, nor their drummers, were ever seen engaged in amusing them in the assembly at his court' (P. W. Joyce, See. Hist. of Ame. Ireland, London, 1903, i. 68).

The poet Ceithre, son of Ean, once presented himself at the castle of this king seeking hospitality. 'He was received into a small, dark, somber house where there was neither the least furniture nor bed. He was given three small dry rolls of bread on a little plate. Arising the next morning, he was not grateful.' Then Ceithre pronounced against Breon the first magic maldescription ever composed in Ireland, and the outcome of all this was that Breon was driven from the throne of Eriu which he held, and his wife of Sabost, and finally, Senechfa himself exceeded all the bounds of hospitality.
HOSPITALITY (Celtic)

The first maintained that she would die unless she obtained a bed made with her own hands. But, in addition to this, she demanded the narrow from the ankle of a wild bear. Because of the narrow, the young man was able to at once see her rabbit, and he set off. For three years, he was able to satisfy all the same equaling requests of the two women.

But Sanchan was still more a beggar than they. He was surprised that she would die unless she obtained a bed made with her own hands, and in addition to this, she demanded the narrow from the ankle of a wild bear. For three years, he was able to satisfy all the same equaling requests of the two women.

inquiries of their guests, in order, without doubt, to afford them better protection in case of necessity (Joyce, p. 184). As the _Ancient Laws_ (iv. 327) specify, where a king might be excused for deficiency of provisions if the number of guests should exceed expectation, it is obvious that a host should be stationed at each road and the limits of his means in order to provide for a number of guests.

As stated above, there was a 'public hospitaller' (brughar, brugaid, briga), who had, as a gift from the king, to assist him in fulfilling the functions of his charge, appanage lands of various kinds. He seems to have had, for example, the temporary usufruct of sequestered lands, and of such lands as fell into the public domain through failure of heirs, or pending the decision of the courts as to the rightful succession to them. In return for these immunities and lands, he was bound to maintain his establishment in a proper condition. His was a position of high honour, and all who laid claim to his hospitality were bound to show him due respect. Though his revenues came principally from the land, he had other allowances. The extent of his house and premises, the character of the building and the number of guests it was to accommodate, were fixed by law. The hospitaller (O'Curry, p. 224) was bound to have always in the house 'minutely given in the _Orla Gobhach_, a MS publication of _O'Flaherty_, the _Anc. Irish_, London, 1873, ii. App. p. 485). He was specially protected by law from trespass and from wanton or malicious damage to his furniture or premises. He was given his privilege as a mark of the king's favour, and was entitled to hospitality (O'Curry, p. 225). Among the privileges extended to the brugaid or brughar, was that of brewing, for his house should never be found lacking the ale necessary for the refreshment of a guest. This right was enjoyed by the bishop, abbot, or other person, and their respective suites, as well as by the household of a chief or the master of a house. The hospitaller (O'Curry, p. 225) was not only entitled to have two hundred of each kind of cattle, but also to supply his house with all the necessary furniture and utensils, including one hundred beds for guests. The _Ancient Laws_ (l. 67) deny that the brugaid had the right to borrow, stating, on the contrary (iv. 311), that he is a 'man of three sorts, the son of a living roosting in the fields to break the bluffs of his face, the son of a dead cock sitting on the hocks, and the pointed snout of a plough; i.e., he should have plenty of live animals, meat cooked and uncooked—usually of three kinds—and a plough, with all other till ing appliances. He is also the son of three sorts, i.e., his house was always to be provided with a sack of malt for brewing ale, a sack of salt for curing cattle-joint, and a barrel of stock, or charcoal, for forging the irons, in case of accident to the horses or vehicles of travellers (O'Curry, i. p. 225). The _Ancient Laws_ (iv. 310 f.) prescribe, further, that his kitchen fires should never be permitted to go out, and that his cauldron should always remain on the fire, full of joints boiling for any guest who might chance to arrive.

In addition to the foregoing, the _Broin Lasa_ (v. 17, 179, 22) provide that a number of open roads should lead to the brugaid's house, so that it might be within access of all; and a man should be stationed at each road and the limits of his means to pass without seeking the hospitality of the brugaid. From the account of the destruction of Da Derga's hostel, we are able to ascertain that at night a light was kept burning on the lawn (faidhche), to serve as a guide to travellers. In fact, Da Derga never closed any of the doors of his house, day or night, with the exception of those to the windward side (Stokes, "Togail Bruaidn Da Derga," in _BCel_ xxii. 1901).

According to _Keating's History of Ireland_, tr. O'Mahony, London, 1856; see also in _Ib._, there were 90 brugaid in Connaught, 90 in Ulster, 93 in Leinster, and 130 in Munster. Though these figures are far from being accurate, they indicate how very numerous these houses of hospitality were.

There were a few brugaid of a still higher class than those already mentioned, who, it seems, entertained kings, chiefs, and the married daughter of kings (O'Mahony). These were on very intimate terms with them. With the exception of this fact, their duties were in every way similar to those of the other two classes. With the creation of the position of brugaid arose the necessity of public hostel of which he might be placed in charge. These hostel were called brudus or bruggai. The ministrations of public or State-endowed hospitality. According to the _Story of the Pig of Mac Domhghaile_ ('Sceil muic Me Dáthghaile,' in _Windisch_, l. 98), there were in the Red Branch period, about the middle of the Christian era, six of these royal hostel in Ireland: the hostel of Da Derga in the province of Cualann, and the hostel of Fergussa Manach (father-in-law of Cuchulainn) which was located at Luasa (now Luisk, to the north of Dublin), the hostel of Me Dáire in Broinney, and the hostel of Da Choca in West Meath, and the hostel of Bla the farmer (brugga) in Ulster, as well as that of Ma Dáthgháile, who was king of Leinster. In regard to the hostel of Mac Domhghaile, it is said that 'there were seven doors in the hostel, and seven ways through it, and seven hearths in it, and seven cauldrons, and an ox and a salted pig in each cauldron. The man who came into the house threw his fork into the cauldron, and what he obtained at the first thrust, that he ate. If, however, he did not obtain anything at the first thrust, he did not make another (cf. also Stokes, "Togail Bruaidn Da Derga,") _Bunshing_, the _Hostel of the Hostel of Da Choca_, in _BCel_ xxii. (1900) 967).

The brudus of Da Derga was the most important of these hostel. The account of the destruction (togiad) of it was published by Stokes in _BCel_ xxii.

(1901), and it relates how Conari L., king of Ireland, and his retinue, who were staying at the time, were destroyed by a band of Irish and British marauders in the 1st cent. A.D. This hostel was situated on the river Dodder, where excavations were made and remains were discovered by Fraser (Proc. Roy. Ir. Acad., 1879-80, p. 29). The brudus of Da Choca, in the destruction of which Cormac Conlinssea, son of Conchohol, king of Ulster, perished, was the next in importance, and was, as stated above, situated in West Meath, a few miles from Athlone. The account of its destruction contains the statement also that 'every brudus is an asylum of Irish and red-haired people, for all criminals guilty of murder (_BCel_ xxii. 315).

There was still another kind of public hospitaller, and that called the _bistanach_ or _bistach_ hospitaller, the connection between him and the brugaid is not very clear. The _Book of the Dun Cow_ (Leabhar na nAithre, p. 123, line 4 f. from bottom) mentions them together, apparently making no distinction whatever between them. The _bistanach_ was obliged...
to entertain travellers and the chief's soldiers whenever they sought his hospitality. In order to enable him to discharge his functions, he was granted a tract of arable land called the Beside-Headleigh, which was equivalent to about 1000 acres. Besides this, he was entitled to a much larger amount of waste land.

According to Cormac's Glossary (p. 130), there were three heads of household during the time of Puns who entertained chieftains and warriors on their hunting expeditions.

In addition to these, we find in Christian times that many monasteries or chaim, often guest-houses, for the reception of travellers. These houses, which were constructed at some distance from the monks' cells, dated from the time of St. Patrick (Joyce, l. 393). According to the Lives of the Saints (Stokes, Lives of the Saints from the Book of Lismore, Oxford, 1890), it was enjoined upon some of the inmates to receive the stranger, take off his shoes, wash his feet in warm water, and prepare supper and bed for him. This was done in accordance with the Ancient Laws (v. 151, 277), which state that hospitality is incumbent on every servant of the Church.

An old Irish sermon on Hospitality contains the following:

"The Lord will say on the day of judgment, 'I was in need of a guest-house (tech-sigad), and ye gave me household'; 'I was in need of a lodging (haid), and ye gave me hospitality'" (Stokes, 'Tithings of Ireland').

Once, when St. Columba expected a guest at Iona, he told the brethren to prepare the guest-house, and for water ready to wash the stranger's feet (Reeves, Additions to the Life of St. Columba, Dublin, 1837, p. 57). When St. Columba's grandson arrived at Saighir (now Skeritten in King's County), to visit the other guests, the latter learned that the fire had unexpectedly gone out, and he asked him with a tone of apology: "The first thing that you (the guest) need is water to wash your feet, but just now we have no means of heating water for you" (Stokes, Lives of the Saints, 277).

"One gentleman, disguised as a poor person, came to the monastery, and complained that his shoes were dirty, as he was arrived early in the day. The monks, in the Quadrangle, heard the commotion, and one of them ran up to him, and said to him: 'You are very fortunate to be here. We can give you a clean suit of clothes to wear, and we will wash your shoes.' The gentleman was delighted at the offer, and said that he would accept it with gratitude.

If a monastery was situated on the banks of a river where there was no bridge, the monks usually had a barge ready to carry any traveller across free of charge (Hesley, Ireland's Ancient Monasteries and Churches, Dublin, 1890, p. 457). Irish missionaries on the Continent established monasteries for the use of pilgrims on the way to Rome, some of which were in Germany, although they were mostly in France (cf. Cramb, Journal of Ecclesiastical History, London, 1863, p. 458, note 2). This was usually added broom with chopped-up meat.

Such a repast, adds Geraldus, was formerly used by the nobles youth from whom this nation boasts its descent, and whose manners it still partly imitates. The family waited on the guests, the host and hostess standing up and taking no food until the needs of the visiting chieftain were attended to. The evening was then passed by the guests in listening to the songs or recitations of the bard of the household, or of minstrels who in their wandering had joined the company. Often all united in choral singing (Rhis and Brynmor-Jones, The Welsh People, London, 1900, p. 220 f.). The bread that they served was a thin and broad cake fresh baked every day, which, Geraldus says (loc. cit.), was called 'brotin' in the old writings, but which was probably very much the same as the 'griddle-bread' or 'bake-stone bread'—bura hlech or bara plano—of modern times (Rhis and Brynmor-Jones, loc. cit.; T. Wright, The Diet. Works of Geraldus Cambrensis, London, 1863, p. 463, note 2). To this was usually added broom with chopped-up meat.
HOSPITALITY (Chineses) 203

kind of cloth manufactured in the country, called kroche, was then placed along the side of the hall, and the matron, or mistress of the family, who was common (Giraldus, loc. cit.). The fire on the hearth in the centre of this hall continued to burn all night, and the people were so arranged that it was always well kept.

'But when the under side begins to tire with the hardness of the bed,' says Orosius (loc. cit.), 'the upper one to suffer from the cold, they immediately leap up and go to the fire, which soon repairs them from both inconveniences; and then, returning to their couches, they alternately expose their sides to the cold and to the hardness of the bed.'

Until the end of the third night the host and the people of the house were responsible for the safety of the guest. According to the Ancient Laws of Wales, one of the cases where guardsians are appropriate is to guard lawful guests [Digestum Code, III. v. 300; Gwentian Code, II. xlviii. p. 377; Anomalous Welsh Laws, xiv. p. 714, in Aneurin Owen, Ancient Laws and Institutes of Wales, London, 1841]. If during the period of his visit recognized by law — i.e. before the end of three days — the host was accused of theft, the testimony of the host could clear him only of theft, committed by night (Anomalous Laws, xiv. p. 736, § 2); and, if the host failed to clear his guest, he himself was obliged to pay three pounds to his lord and recover his property from the complainant, i.e. sufficient, no doubt, to relieve his guest of the punishment he might suffer (ib.; also ch. xiv. p. 708; and ch. xvi. p. 709).

There are three privileged progressive visits, 'says the Tract of Dependants Medium (W. Prothero, The Ancient Laws of Cambria, London, 1820, p. 6, sec. 11). These are: the visit of a head of the tribe of the Cambrians; the visit of a lord from a bordering kingdom; the visit of a bard from the bordering kingdom in the convention, according to the privileges and institutions of the bards. If during the period of the visit he is committed by theft or murder, the bards of the host are to maintain his innocence, and if he is killed, the bards of the deceased are to avenge his death (ib.; also ch. xiv. p. 709).

This goes to show how greatly a violation of the laws of hospitality was condemned among the Welsh; and we are not surprised, therefore, to discover that severe punishments were meted out to the guilty. If it happened, for example, that a guest was seen to arrive and enter a house in good health, and in the morning was found dead, and the host and his family had raised no alarms, or exhibited no marks of wounds received in his defence, the host and his family could not escape capital punishment, unless perhaps they were liberated per patriam, if the King's justices should deem that the truth could be ascertained per patriam (Lewis, op. cit. 379). It was on this account that laws were made about receiving and parting with guests by daylight. If, on the contrary, the master of the house was found dead in the morning, and his servant or a stranger had passed the night in it, such stranger or servant could scarcely escape danger by the inquisition of the laws concerning consummation. 'For if the patriam could not say the truth as to such secret deed, the man was sufficiently acquitted by their not finding him guilty' (ib.).

The Ancient Laws provide further (Anomalous Laws, iv. 458, § 14, ed. Aneurin Owen) that, 'if a person come as an intimate to another person, having an animal or other property with him, when he departs, he is not to take with him the offspring of the same; nor anything but what he brought with him to the house, if it remain, unless he be assigned to him by the host; so as which is said; an agreement is stronger than justice.'

As in Ireland, no stranger was to remain beyond three days without 'commendation,' i.e. without being commended to some lord under his protection, and answer for him, or without being admitted to some borth, or fellowship of mutual responsibility (Lega Bem. i. 20, in Lewis, 231). In Ireland this was 'the lord's protection,' and was necessary to every stranger to safeguard him through the country (J. Strachan, Stories from the Tides, Dublin, 1806, p. 4). Calculations not only accept the protection of King Conchobar of Ulster on his first visit to Emain Macha, but even requires the Ulstermen to accept protection from himself (id.).

Of the king's guest the Venedotion Code (I. x. 10, § 18, ed. Aneurin Owen) states that he is one of the six persons to be served with food and liquor by the royal steward. The other five who are the recipients of this honour are the king himself, his kinsmen, his adelings, his chief falconer, and his foot-holder. And, finally, one of the four persons for whom there is no protection against the king is 'a person to whom the king is a supper guest, who ought to supply him with food that night, and who does not supply him' (Digestum Code, II. viii. p. 214, ed. Aneurin Owen).

IOLOMIA. — This is sufficiently indicated in the article.

JOHN LAWRENCE GERRI.

HOSPITALITY (Chineses).—The Chineses are hospitable people; they enjoy social intercourse; they love to chat together. notwithstanding the hard struggle for existence which many of them have to carry on, they enjoy life to the full, and extract well-nigh all the pleasure which can be got out of it. One of the first sentences in the Confucian Analects runs thus: 'How pleasant it is to have friends come from a distance!' The commentators amplify the wording of this so that it reads: 'How pleasant to have friends come to you from a distance, attracted by your learning.' There is no doubt that the context gives them reason to paraphrase the passage in this way. At the same time, although the attractive power that draws the friends together is learning, it opens up to the guest hospitality. This is not the only instance in the Classics; others are even more to the point, and in them we find hospitality enjoined as a duty. Now, these Classics are the standard which the Chineses have applied to their conduct, and they contain, according to them, the principles which are to guide them in all affairs.

It might be thought that the etiquette of this Eastern people, with its stiff formalism, like a coat-of-mail, would so hamper intercourse that it would act as a kill-joy on all attempts at the offering of hospitality; but under the rigid forms of outward ceremonial there beats a human heart warm with all the elements that foster the exhibition of it. A good correctness to formality of intercourse, lest it should dull the edge of hospitality, is found in a saying of the philosopher Ts'ao, one of the principal disciples of Confucius: 'I daily examine myself... whether in intercourse with friends I may not have been sincere.' Another disciple of the Sage also gives a word to much the same idea when he states it as one of the leading principles in the conduct of a man to whom the term 'learned' might be applied: 'If, in his intercourse with his friends, his words are sincere.' We thus see that those followers of the Master were carrying out the principles he laid down of 'Hold faithfulness and sincerity as first principles.'

In the compilation of memorials known as 'The Book of History,' extending over about 1700 years from the most ancient times before the day of Confucius, we have, in the portion known as 'The
HOSPITALITY (Christian)

Great Plan’ (3055–2198 B.C.), one of the oldest parts of this ancient work, ‘the entertainment of guests’ laid down as one of the eight objects of government. This would seem to include in its purview ‘all festive ceremonies, all the intercourses of society.’ In an agreement entered into by an assembly of 900 B.C., one of the injunctions was: ‘Be not forgetful of strangers and travellers.’ This was taken to include officers from other countries. The Doctrine of the Moab—‘One of the Chinese Classics’—in a description of the duties of a ruler of a country, says that ‘by indulgent treatment of men from a distance they are brought to regard one’s city as their capital.’ The commentators differ as to the meaning of ‘men from a distance.’ One thinks it includes ‘guests or envoys and travellers, or travelling merchants. The learned translator of the ‘Chinese Classics’ (J. Leggs) doubts whether any others but travelling merchants are intended by it. Another commentator would apply it to ‘the princes of surrounding kingdoms.’

Confucius considered that the study of ‘The Book of Poetry’ taught the art of sociability. This book is a collection of 305 pieces selected by Confucius from more than 3000. They may almost be described as folk-songs, thus collected thousands of years before the vogue for such things in the West. These short poems represent the life of the Chinese some 3000 years ago. Some of them were sung at festive gatherings. In one ‘admirable guest’ are spoken of. Merry gatherings they seem to have been. We read: ‘As we feast, we laugh and talk.” In another we have a general returning from all his toils and feasting happily with his friends on roast turtle and mince carp.” Another is descriptive of a feast given by a king. The hospitality thus sung in these songs seems to have been appreciated to the full.

The Chinese system of treatment in its train, among its good features, the development of hospitality on a far more liberal scale than might be expected. Should a European, in adopting a Chinese surname for his own, rise among the inhabitants of the ‘Middle Kingdom,’ come across a Chinese gentleman bearing the same name, he will find the most genuine interest taken in him by his newly-discovered clansman, and the utmost hospitality shown to him. The clansman in trouble or distress finds a refuge in his ancestral home in the heart of his clan in this land where poorhouses are unknown. Not only so, but a clansman, when out of work, can, and often does, go and live for days and weeks with one of the same clan as himself. Bed and board are given to him freely, and he is hospitably entertained until work again comes his way; and he, in his turn, is able to offer the same entertainment to a brother clansman in need.

The teapot in China is always ready to be produced on the advent of a stranger; nor is the Chinaman content with a single teapot, for often each cup serves for one, and each guest has a brew made specially for him, and replenished with boiling water as often as he likes. These cups are slowly sipped while the host does his best to entertain his visitor. Sweetmeats and pipes are also offered. A phrase in the Chinese language which is constantly heard is ‘Come and sit down,’ being an invitation to the house. For to those who sitter it. The low status of woman in China, her supposed inferior position in contrast to man, and the false prejudice of the Chinese, have hitherto prevented the implying the sexes in entertainments, such as dinners, parties, and social gatherings.

Respectable women were excluded from participation in all such functions except when all present were of the same rank as themselves. But with the revolution in manners, customs, and education, as well as in government, which is now taking place in China, a different position is being taken by women, and she begins to share with her husband in both the dispensing and the receiving of hospitality.

LEWIS-LYLL.—In addition to the ancient sources cited in the foottnote, the following modern works may be consulted: J. Doolittle, Social Life of the Chinese, London, 1885; H. B. Gray, China, London, 1879; C. W. Bail, Things in China, Shanghai and Hongkong, 1908; E. K. Douglas, China, London, 1867; S. Kidd, China, Dublin, 1868.

HOSPITALITY (Christian).—The foundation of the first hospitals and hospices by the Christian Church also shows practical work, which the principles of hospitality was applied by Christian charity to invalids and weary travellers. Hospitality is proverbial in the East (cf. the story of Abraham, Gen. 18:1). The guest was sacred and held in esteem, although discovered to be an enemy (Jg. 19:21). Before the time of caravansaries, which were unknown until the end of the 7th cent. B.C. (cf. Jer. 9:9), the stranger, when travelling, was dependent upon the hospitality of private individuals. Hospitality was practised among the Greeks and Romans also, but it was the private hospitality of a civic genius. Christianity transformed it into a public virtue, by demanding as a formal duty from members of the Church, and especially bishops, a more scrupulous and constant observance. In fact, it was the earliest Christians interpreted Christ’s words, ‘I was a stranger, and ye took me in’ (Mt. 25:35), in their broadest sense (Mt. 10:40, Lk. 10:16-17), and showed hospitality towards pagans as well as Christians.

St. Paul followed in Christ’s footsteps: ‘In love of the brethren be tenderly affectioned one to another; communicating to the necessities of the saints; given to hospitality’ (Ro. 12:13, cf. 1 Th. 5:15). A ‘saint, i.e. a Christian, provided with a letter of recommendation from his church, was welcomed by the Church of Rome from one end of the Roman empire to the other without having any anxiety about a home. Wherever there was a Christian church he was sure of receiving food and shelter, and admission in cases of illness. The Christians showed hospitality towards all poor travellers.

Hospitals in the East.—Naturally it was the travelling attacked by illness that called forth the greatest pity and anxiety. This was the origin of hospitals (Inooyia, Hospiticia), the first of which was founded in the lower Tigris valley on account of a famine which had caused a deadly epidemic.

The historian Mommsen (Z.E.F. III. 15) relates the foundation in A.D. 270 of the hospital of Edessa in Syria thus: ‘The town of Edessa, being afflicted by famine, the hermit Euphras came forth from his seclusion to spread the rich with the hard-hearted in allowing the poor to die instead of devoting a part of the superfluous bread to the relief of the needful. People, in wealth which you are so carefully amassing, he said to them, “will only serve to condemn you, while you are losing your own souls, which are worth more than all the treasure in the earth. For studied by these words, the rich people of Edessa informed him of their inability to decide upon the person to be entrusted with the distribution of their wealth, as the people of their acquaintance were all covetous and might part it to a wrong use.” “And Euphras tested them, ‘what is your opinion of me?’ “You are an honest man and a holy person,” they answered, “give you charge of the distribution of our alms.” He thereupon received large sums of money from them, and immediately ordered about three hundred beds to be fitted up in a large room, and there attention was devoted to all those suffering from the effects of the famine—strangers and inhabitants alike. Basil, bishop of Cesarea (in Cappadocia), had also opened a hospital in 375, not far from Edessa, consisting of several separate houses (see Greg. Naz. Orat. xiii. “In landam Basilii Magni,” 30).
HOSPITALITY (Christian)

If Orpheus and Cappadocia can boast of having had the first hospital, it was Constantinople that first specified the different classes of those requiring relief. Between A.D. 400 and 403 Chrysostom built the first hospital in the city, and the surplus of his income went to the archbishopric. Of these he placed under the charge of two faithful priests, to assist whom he engaged physicians, cooks, and carpenters to hold a hospice in some part of the town. There were seven different hospitals: (1) the Xenodochium, inn for stranger travellers; (2) the Neocosternum, home for the treatment of acute complaints; (3) the Lobotrophium, shelter for cripples and chronic invalids; (4) the Orphanotrophium, home for the reception of orphans; (5) the Gerontotrophium, home for old people; (6) the Ptochotrophium, home for the reception of the poor; and (7) the Pandechium, a refuge for all kinds of destitutes.

Jerome is reputed to have founded the first orphanage in Bethlehem; and John the almoner, who was elected patriarch of Alexandria in 608, organized assistance to the poor and sick of that town.

The Council of Chalcedon (451) recommended the practice of envoys 'to the hospitals, to remain in the service of the bishop.' Widows were placed at the head of the list of those maintained at the expense of the Church, and in return they were to work for the benefit of the sick and destitute women. Among the qualifications required from a widow in order to receive the Church's bounty St. Paul mentions: 'if she hath used hospitality to strangers, if she hath washed the saints' feet, if she hath relieved the afflicted.' (1 Thess. 5:26).

Hospitality in the West.—Christian hospitality in the West gave rise to two kinds of institutions: (1) hospitals, intended for the sick, lepers, and other sufferers, and generally placed under the control of the bishop; and (2) hospices or almshouses, annexing itself of the monasteries, situated along the chief roads and in dangerous mountain passes; these extended a welcome to travellers overcome by fatigue or benumbed with cold.

Hospitality was the chief virtue enjoined upon the bishop. The bishop, says St. Paul, 'must be given to hospitality' (1 Thess. 5:11), and the Apostolic precept was confirmed by the most famous Fathers of the Church. Jerome in his Ep. III. ('To Nepotian'), and Chrysostom in his Second Sermon on Genesis, advised Bishops to keep their houses open to strangers and sufferers in the cause of truth, and that at the service of the poor, for, in doing so, they are sure to be entertaining Christ himself. St. Augustine had started a hospital in his own house, and often sat down at the same table with its guests. The Councils adopted this principle, and entrusted the bishops with the assistance of the poor and the sick (Council of Chalcedon, can. viii.).

In the decrees of the Councils of the Gallican Church are found the earliest regulations concerning the relief of the poor and the sick. The First Council, held at Orleans under Childeric in 511, devoted two canons to them. The first decreed that 'of the proceeds of offerings or lands granted to the Church by the king two-thirds shall be employed in the maintenance of the clergy and the poor and one-third in the Constantinople that prisoners.' The sixteenth adds: 'The bishop shall provide food and clothing, so far as his means will allow, to the poor and the sick who on account of their infirmity cannot earn their bread by their work for themselves.' The Fifth Council of Orleans (540) is quite as formal. After forbidding the unlawful use of any part of the alms bequeathed to the hospitals, it enjoins upon the bishops ('can. xx.), care particularly of lepers, and the duty is enjoined not only to the best of their ability with food and clothing, 'so that Christian mercy might not fail even in the case of victims of that most loathsome disease.' The fifteenth canon mentions the establishment of hospitals as being in France, and founded at Lyons in 542 by King Childerich and his wife Ultrapoth, at the instigation of the S. John, bishop of Paris. It does not seem to have had one until the middle of the 7th cent., when Bishop Landry established (850) a home for invalids and poor travellers near his church—whence the name 'Hôpital-Dieu.' It is to Lanfranc, its archbishop, that Canterbury owes its hospital (1070), and the first London hospital was called S. Bartholomew's (1109). In these semi-barbarian ages hospitals were often under the Holy Spirit, whose emblem, a dove, is found on the front of several, e.g. the hospital built by Pope Sylvester in Rome (486).

At first the bishops had the management of the hospitals, but gradually, as the duties increased, they were passed over to the chapters, who delegated this work to a few priests called promotores or provveditori. The Capitulare of Charlemagne decreed that the secular and regular clergy should, as one of their first duties, relieve the sick; and, to guard against neglect of duty, they placed the xenodochia under the control of royal authority (Capit. 185). The Council of Meaux (845) refers to the hospitaux socordum, complaining that these had been diverted from their original purpose of hospitality, and imploring their reinstatement as almshouses for travellers and invalids.

3. Hospices of the monasteries in the Middle Ages.—While the bishops were the first to establish hospitals for the care of the sick, it was the monks who created a new form of hospitality—the almshouse, or so-called xenodochia. Its foundation is generally attributed to St. Benedict of Nursia; this, however, is not correct, as it can be traced back as far as the very beginnings of Eastern monasticism.

The custom of washing the feet of the guests which was in use in the Irish convents of the 6th cent. came from the East. Johannes Cassianus, founder of the monastery of St. Victor near Arles (519), in his Collationes (chapter xvi. 'Magister hospitationis'), describes the ceremony performed at the reception of a guest. After the customary salutations the traveller was introduced into the hospital, a wing of the building apart from the rest of the cloister, and taken to his room. After having been shown into his quarters (commodium), he had his feet washed by one of the monks. The whole company then shared in the meal, during the arrival of a guest, breaking their fast and eating cooked food.

When Columban, at the end of the 6th cent., brought Christian principles, along with the elements of civilization, into Gaul, which had been laid waste by the barbarians, he founded monasteries at Ainegre, Luxeuil, Fontaine, Bobbio, etc., and urged upon his monks the duty of hospitality towards strangers and poor pilgrims. His discipies, St. Ouen, St. Farmon, St. Gall, etc., practised this virtue to such an extent that in the 9th cent. the fame of Scottish hospitality was wide-spread. These are the hospitable monasteries referred to by Charlemagne in his Capitulaires, by the members of the Council of Meaux (845), and the Council of Quierry (858), when they speak of the decline of the hospita peregrinorum. The bishops assembled at the first of these Councils implored the Emperor Louis II in Dijon to restore these hospices, help them by endowments, and place them under their control.

'It is our duty,' they said (can. 40), 'to inform your Majesty concerning the houses established and equipped in the time of our predecessors, and to-day abandoned, which are possessed by hospitals, especially, which the kindly people of that nation had built there, and endowed from their wealth acquired by their good deeds, have been completely diverted from their real purpose. Not only are those who seek for hospitality refused
admissions, but even those who, bound by the tie of religion, have served the Lord from their childhood, are being driven from them, and compelled to go begging from door to door.'

Besides Johannes Cassianus and Columbanus, who founded the practice of the Eastern Church, Benedict of Nursia also imposed the duty of hospitality upon the monks of the West. The 33rd chapter of his Rule is entitled 'de Hospitibus suscipiendis,' and prescribes that 'all visitators who chance to arrive be welcomed as if it were Christ Himself, who will one day say to us, "I was a stranger, and you took me."' The purpose here shown is that of charity, especially to servants of the faith and pilgrims' (PL. lxv. 750; cf. E. Martene, Commentarium in regulam Sancti Benedicti, Paris, 1890).

The hospices were practically no monasteries in the Middle Ages without its xenodochium, and many had a monasterium as well. These hospices rendered valuable service at a time when the roads were infested by robbers, or exposed to frost and snow, e.g., those leading through the passes of high mountains, and subject to thick fog or snowstorms. Such were the hospices adjoining the cloisters on the three chief Alpine passes leading from Switzerland to Italy and France. The hospice of St. Gothard has been almost abandoned since the completion of the railway from Lugano to Locarno (1862). That of Simplon is greatly affected by the new road leading from Brig to Domodossola. The hospice of the Great St. Bernard still exists, and is prepared to receive the most abundant traffic on the road from Martigny to Aosta. The monks living there belong to the Augustinian Order, and their lay brothers are called Marroniers. The adventures of those brave men and their famous dogs are well known. They have rescued from certain death thousands of travellers lost in the snow and almost frozen to death for the purpose in extremity of the Great St. Bernard received an annual grant from the kings of France (1760). The grant was confirmed and increased by Napoleon Bonaparte, after the famous crossing of his army through this pass (15th to 21st May 1800).

4. Orders of Hospitallers.—The epidemics which frequently raged among the pilgrims travelling from the West to the Holy Land, and among the soldiers of the Crusades, led to the foundation of hospitals and Orders of Hospitallers in Palestine. The first hospice of this kind at the end of the 8th cent. by Pope Gregory I, and afterwards restored by Charlemagne, who took a great interest in the Christian hospital at Jerusalem. The hospice of St. John, established at Jerusalem before the first Crusade by a few Amalfi citizens, gave rise to the first Order of Hospitallers called 'Hospitallers of St. John of Jerusalem,' known as Knights Hospitallers, whose rules were drawn up by Brother Gerard (or Gerhard) (d. 1190). This Order, composed of three classes, priests, knights, and attendants, was of a semi-military nature. As a consequence of the services it rendered, it spread throughout the whole of Europe, and was divided into eight provinces or 'languages.' After the conquest of Palestine by the Turks, the Joannites transferred the seat of their Order to Rhodes and subsequently to Maltes, whence the name 'Knights of Rhodes' or 'Knights of Malta,' by which they are also known. The French branch disappeared at the Revolution of 1789. The German branch was restored by Frederick William IV., king of Prussia, about 1860, and still exists under the name of 'Hospitallers of St. John of Jerusalem.'

5. Hospitality in modern times.—It may be said that individual charity, such as the hospices, is still found in Europe, and the number of hospitals, especially in the north of Europe, e.g. Scotland. But, if private hospitality has diminished as a result of civilisation, public hospitality, on the other hand, has advanced with rapid strides not only by developing existing charitable institutions, but by creating new and very ingenious methods of relieving the sick and destitute.

This leads us to subdivide the remaining discussion into two parts: (1) the development of ancient institutions; and (2) the formation of new methods of relief.

(1) The ancient xenodochium has been transformed into various kinds of night refuges. As early as the 12th cent. the Emperor St. Louis, during his journey from Paris to Paris, was in a position to provide three hundred vagrants with three nights' lodging in their convent of 'Blancs-Manteaux.' Destitute women were received in La Sainte Chapelle. In 1722 Massabo founded the first night refuge at Marseilles, and his example was followed by Lamas and the Philanthropic Society, who opened large night shelters for men and women in Paris (1778). The municipal board of Paris, the municipalities of London, and most of the European capitals, followed in their train, opened various night shelters. The Salvation Army has distinguished itself in this respect.

As a result of the reforms started in England by John Howard and Florence Nightingale, and in France by La Rochefo coucaul-Laincourt, Tenon, etc., the ancient xenodochium has developed into the modern hospital with all its hygienic improvements. Before these reforms the best organised hospitals were military or lazaretto hospitals.

At the end of the 18th cent. the public hospitals in Paris were still in a deplorable state. A new order was formed with the object of establishing a hospital for the poor. They were to be placed in a house bought or rented for the purpose. The first home of this order was in the Temple quarter of Paris.
HOSPITALITY (Christian) 807

France had reached such a depth of decay that they were dreaded by the poor, and deservedly called for the censure of philanthropists and the complaints of medical men. In Paris, wrote Voltaire to Partou on 22nd April 1768, 'a hospital (Hôpital-Dieu) where perpetual contagion reigned, fever broke out there, and died of its own disease together with the sick and the healthy. The patients were burned as corpses, struck by the hand of God, whose first duty was to alarm for their site, and they were subjected to cruel treatment. Charity of such a dreadful kind aroused our horror. An attempt was made to dispose of the horrors of the hospital, reforms were tried with different names, as 'Hôpital-Dieu,' 'La Charité,' 'La Pitié,' 'Le bon Pasteur,' but that did not succeed in imposing upon poor invalids who hid themselves to die at home, so terrified were they at the thought of being forcibly dragged into these places.'

At this time the insane were chained in their cells, and such was the terror inspired by these victims of insanity that they were believed to be possessed by the devil. Dr. Fludd showed great courage in breaking the chains (1779–84).

In England John Howard (d. 1790), who is well known on account of his remarkable zeal, took the initiative towards reforming hospitals, and in France that step was taken by the Academy of Sciences. The first step was taken in the Hôtel-Dieu in 1784, and burned to death several hundreds of the inmates, roused a widespread feeling of pity and indignation. 1 £200,000, a large sum at that time, was collected by subscription for the reconstruction and improvised sanitary arrangements of this hospital. The committee appointed by the Academy of Sciences for the reform of public hospitals numbered in its ranks such philanthropists as Bailly, the Duke of La Rochefoucauld-C luxembourg, tenon, etc. the memoir written by Tenon (be of technical knowledge and courage, denouncing the horrors referred to by Voltaire. The 'Convention' appointed a committee to carry out the propositions that were made, the Revolution and the war of the Empire prevented the realization of Tenon's scheme. Nothing more was achieved until Louis Philippe's reign. Then the Count of Rambuteau, prefect of the police department, ordered preparatory investigations concerning the rebuilding of the Hôtel-Dieu, which, however, was not actually achieved until the reign of Napoleon III. (about 1868–69). We would call special attention to the most recent improvements, especially in the maternity and surgical wards of hospitals, resulting from Pasteur's discoveries and Lister's antisepctic method.

Institutions for the maintenance of widows and orphans are as old as the Church. Whenever there was a charitable institution it regarded the assistance of those unfortunate as its first duty. But there are several ingenious modern methods of this kind which we shall only mention. Having noticed the disadvantages of a widow having to live alone while her children were sent to an orphanage, some philanthropists gave her pecuniary assistance, enabling her thereby to keep her children at home, and to preserve the family intact—a state of affairs beneficial to both mother and child. It was this idea that gave rise to the 'œuvre des petits familles' founded in Paris in 1891. Its aim is to bring together orphans of both sexes and all ages in a house where they are under the care of a Christian matron, who treats them as if they were her own children. Here they receive manual instruction, one of the regulations being that every orphanage must have a handicraft. On the other hand, orphans, other new methods of hospitality to children. In the first rank stands the institution of 'crèches' (infant asylums), founded ever since the Middle Ages the monasteries have hospitably opened their doors to such fallen women as have repented, and, endeavouring to hide their shame, and making a fresh start. Robert d'Arbrissel, the celebrated Franch, made repentance the object of his Order of Fontevrault. One of the convents of this order, St. Magdalen's, was specially set apart for poor and young girls. In more recent times this desirable work of hospitality and moral aid has been carried on by the Roman Catholic 'Good Shepherd's Nuns,' the Anglican and Protestant deaconesses of Kaiserswerth, and the female offices of the Salvation Army; and to-day it is being done by the rescue-work of the 'Home of Fontaine,' founded by Madame d'Avril de St. Croix, and by R. Bérenger's 'League for the Suppression of the Trade in White Women.'

The aged also, afflicted by poverty and infirmities, have at all times aroused the compassion of the faithful. At one time they were received in certain of the monasteries; nowadays there is no town of any size which does not possess its home for the aged. A new feature introduced into these homes in the 19th cent. was the keeping together of old couples, and the association of widows and widowers with young children, so that the company of their age might be brightened by the happiness of youth. We may mention as examples of the new form of the 'Aisle des petits Ménages' at Issy, near Paris, built on the site of the ancient 'Hospital for Lepers' of St. Germain (founded in 1100) and the 'Home of Sainte Présé' in Paris, and as a type of the latter the 'Aisle protestantes de Nanterre' for old women and little girls.

(2) Among modern forms of hospitality the most noteworthy is what is known as the workhouse—a combination of refuge and workshop. The idea, however, is not quite new, for, even before the French Revolution, workshops had been opened in times of poverty to enable the poor to earn a livelihood. 1 "But," says Louis Riviere (L'Assistance par le travail & Paris, 1869), 'the characteristic feature of all these consists of a new element, the effort to impart a systematic organisation to this method of relief, so that the poor man may obtain something more than pitiful assistance. All the institutions have a common aim: in the case of an able-bodied pauper, instead of alms, which are degrading and encourage idleness, they substitute enabling work—provisionally, however; for, although sufficiently remunerative to ensure a livelihood, it also stimulates the desire to obtain something better. The work is compensated either by food and lodgings or by wages.' This method of aid, hospitality by return for work, has been applied on a very large scale by F. von Bodelschwingh in his admirable settlement near Bischof in Westphalia and by J. Rosend at Marseilles; and in Paris and other cities, women have been founded by Madame Suchard de Presse and Risler and Léon Leibnitz, and for men by A. Robin and the Earl and Countess of Lanbein.

Connect with these institutions there are homes for convalescents and for worn-out working men. To give the former classes the 'Clasina Helvetia' at Mentone and the National Shelters at Venice and Wiesenhof founded by Napoleon III., and, in the second, mention is due to the Sailors' Homes established in the British Isles and other countries, and maintained in order to provide a home for homeless sailors returning from long and perilous voyages. Hospitality to return of a matron, they find comfort for body and soul.

The care of children is a characteristic feature of our times, especially of the French nation, which has shown its ingenuity in the matter of orphanages, other new methods of hospitality to children. In the first rank stands the institution of 'crèches' (infant asylums), founded 1 'œuvre des Vœux' ('De Vœux founded by Ed. Vaucher in Paris, 1891.

1 The Hôpital-Dieu in Paris had become a sort of convalescence, open to all poverty-stricken, aged, disabled, and vagrants of both sexes, who, being treated there, it was said, in 1630
2 No fewer than 6000 people took refuge there, and it was quite an ordinary occurrence.

2 Cf. the 'œuvre des Vœux' founded by Ed. Vaucher in Paris, 1891.

3 'Aisle temporaire pour des Femmes' ('1885).

4 'œuvre de l'Hospitalisation par le travail à Sablerville et à Fassy.'
HOSPITALITY (Greek and Roman).

Hospitals in Paris in 1844 by Firmin Marbeau, and now extending their privileges to the children of more than two hundred European towns. Their aim is to nurse and feed young infants whose mothers have to go out to work. To this class belong the "Croche Fortunat-Heinie" and the "Anais Delille" in Paris, the "Porcupines" in Versailles, etc. The children's shelters established at St. Maurice-Fossés (near Vincennes) differ from infant asylums in receiving children from two to seven years of age, and not only by the day, but for several years, as long as their parents are unable to attend to them. The services done by the "Colonies de Vacances," started by L. Bion at Zürich and imitated in Paris, Berlin, etc., and by the "Enfants à la Montagne" organized by Louis Comte, a St. Etienne clergyman, which aims at enabling the delicate and weak children of large manufacturing towns to get the benefit of country air and good food, are also worthy of the greatest praise. But still more to be pitied is the condition of the children in working-class poor are those wretched little ones whom Jules Simon called "orphans whose parents are still alive." Homes for such children were founded in London by Dr. Barnardo, in Liverpool by James Nugent, and at Ashton Down, near Bristol, by George Muller; and in Paris Mendames A. de Barran and Kergomard established homes and professed hospitality and education to the poor creatures who were the victims of unnatural parents. Thousands of these children have by this means been prevented from becoming thieves and criminals.

Children whose instinctive or diseased nature required physical and mental instruction were to be sent to.user.error. This error is not corrected before by bad company. Attempts have been made to improve the moral condition of agricultural schools by associating (at the junction of the Indre and the Loire) and at Le Porce (on the Loire), where military discipline and agricultural work has succeeded in teaching the most unmanageable natures.

But more important than all these ways in which the poor have been helped, is the beautiful spirit is solicitude for young women and girls in search of employment. Many associations, differing in many ways but aiming in common this spirit of charity, vie with each other in the enthusiasm with which they not only provide homes for lonely girls, servants, or governesses in search of work in Paris, but also give them valuable advice and secure situations for them in shops and good families. Such are the "Union internationale des Amies de la jeune Fille," which has branches in all the French provinces as well as in Paris, the "Amistia" club, the "Adalphi," and the "Restaurant pour Dames seules."

And, lastly, it is an almost incredible fact that charity has not given up hopes of curing what was thought to be an absolutely incurable vice, drunkenness. Establishments have been opened in Switzerland, France, England, Sweden, etc., for the cure of inebriates, and in spite of great difficulties they are beginning to obtain encouraging results.

HOSPITALITY (Greek and Roman).

The word ἀσύχωρες, as used in the New Testament, is to be distinguished from ἀσύχωρος, which means originally an outsider or foreigner of some sort. Herodotus twice notices the Laconian use of the word in this its primary sense, as equivalent to ἀμφιβολος. When Cicero was present at their banquet before the feet of Pausanias, he exclaimed: 'With this pebble I give my vote not to run away from the foreigners' (rape fiesios). Cicero tells us that the word hostis meant originally nothing more than perigrinus, quoting the Twelve Tables in support of his assertion, which philology sanctions by connecting the Latin hostis with the German Gast. T. H. D.}

HOSPITALITY (Greek and Roman)

In the Odyssey the first thought of Telemachus, on being told that Mentor is an hereditary guest-friend, is to press some keepake upon his acceptance. 1

Fifthly, the parties to the relation secured themselves against impostors by the device of tickets, which were broken between them, one part being retained on either side, as the Greek word for a ticket of this kind, and we find Pausanias speaking of it as hospitais tesearo. 2

Probably this custom grew up in post-Homeric times. If so, Euripides is guilty of an anachronism when he makes Jason offer such hospitality-tickets to Medea, for her to present to his guest-friends. 3

Crito, the contemporary of the poet, might have adopted this method of securing the welfare of Socrates, had that philosopher availed himself of the means provided for his escape into Thessaly. 4

Lastly, the relation of which we are speaking was no light exhibition of casual goodwill, but a solemn engagement which had the sanction of religion. The Supreme God in one of his aspects presided over it, so that we hear of Zeus Zephyros and Jupiter hospitatus. 5 What made the offence of Paris so rank, in carrying off Helen, was that it was a violation of the rights of hospitality; and what added a darker horror to the crime of Agiethus was that he first gave a banquet to Agamemnon and then slew him as one at his table. 6 It is worth noting that Herakles, who ended by being the greatest saint in the Stoic calendar, started on his career by being a bad man, who slew a guest with his own hand. 7

Besides indicating the special relation of which we have been speaking, the word eires signifies also any stranger or foreigner as opposed to koivos, koton, enkaios. Hence the adjective eires was used like the American stranger. Men did not travel much for pleasure in early times, for that was to cut themselves off from the social organism, of which they were part, and expose themselves to the mercy of strangers. If a man were found wandering about in another country, he had generally some very good reason for having left his own. Perhaps he had killed some one, whether by accident or design, or had in some way made himself obnoxious at home. At all events, he was helpless now, and to the credit of human nature it is said that the appeal to pity is seldom ineffectual. In early Greece, as among the Jews, there was a strong sentiment in favour of the protection of strangers. Any wanderer or refugee was regarded as being under the protection of Zeus Zephyros; say more, the helper of the helpless, Zeus 'Iatwos, extended his care over him. This sentiment finds strong and frequent expression in the Odyssey. 8 It is remarked, indeed, of the Phaeacians that they have no fondness for strangers, 9 but even they treat their unknown visitor royally, when once they have accepted him as a suppliant. Had we not the authority of Athenaeus for the statement we might be surprised that the Phaeacians, of all people, should display an aversion from strangers, considering how fond they were of visiting foreign lands. The Cyclopes are a gruesome exception to the Homeric world to the general regard displayed for strangers, but then they are not men but monsters. The hospitality of the Tauric Chersonese is beyond the ken of Homer. Human sentiment, when it lacks account of the very system of eires, or hospitality, of which we are speaking. The various words in Greek and Latin for a place of entertainment do not connote more than our word "inn" — innoeio (Artheus, Hop. 660), innoepie (This. III. 68), innoeia (Serv. in Aen. 8. 187), or innoeion (Ovid, Met. 16), innoeium (Hor. Epist. 2. 11. 12), foro (Ovid, Met. 16. 14). 4 Eurip. Aig. 660. 5 Od. viii. 210. 6 J. J. V. His. 150. 7 Od. L. 187. 8 Lord Derby's tr. of the Iliad (v. 276 f.)

1 In Greek-Roman times the accommodation for travellers depended on having a letter of introduction, which provided an account of the very system of eires, or hospitality, of which we are speaking. The various words in Greek and Latin for a place of entertainment do not connote more than our word "inn"—inoeia (Artheus, Hop. 660), inoepie (This. III. 68), inoieia (Serv. in Aen. 8. 187), or inoieion (Ovid, Met. 16), inoieium (Hor. Epist. 2. 11. 12), foro (Ovid, Met. 16. 14).

efficiency, clothes itself in a religious sanction, and appeals to the powers of heaven in favour of what is not, but ought to be. There are many stories which tell us how the God of Hospitality and the God of Supplication (Zeus Edeus and Zeus Isterus) cannot be flouted with impunity. Folklore also declared that the gods assumed the likeness of strangers, and went up and down in the world to keep watch upon the ways of men. The outrageousness of the offence committed by Antinous, when he hurled a stool at the wandering beggar who asked for alms, stands out in high relief when we find that even the unruly suitors were shocked at this conduct, and that it is one of them who expostulates with him thus:

Antinous, thou hast not done well to hit the unhappy wightner, escorted man, if indeed there be a god in heaven! And gods in the likeness of strangers from other lands, taking all sorts of forms, roam about among the cities, keeping watch upon the violence or good behaviour of men.\footnote{1}

Thus, in the Hellenic as in the Hebrew world, one might in exercising hospitality be 'entertaining angels unaware' (He 13:2). Even in St. Paul’s time, in the cities of Lycia and Asia, there was vitality enough in the idea of 'gods coming down in the likeness of men' to lead to practical expression in the way of sacrileges (Ac 16:19). It was the same district which was the scene of the story of Baucis and Philemon, who entertained at table Jupiter and Mercury.\footnote{2}

That there is more about hospitality in the Odyssey than in the Iliad is probably due to the nature of the subject-master—the one dealing with peace, the other with war. When the survey from Aegaeomene comes to Achilles in Iliad, bk. ix., the first thought of that hero is to call to Patroclus for a bigger bowl and a stronger mixture with a cup for each. Patroclus’ own forethought supplies such trifling accessories to the feast as the chines of a sheep, a goat, and a fat hog. The carnivorousness of the Achaeans here, we may note in passing, stands in strong contrast with the temperate, and almost vegetarian, diet of the Athenians. When Priam comes as a suppliant to Achilles, in bk. xxiv., he is met with the same prompt and sheep-eating hospitality; but the hero, aware of the uncertainty of his own temper, has to warn the old man to avoid irritating him, lest he should forget, even in his own best, that he is dealing with a suppliant, and might thereby transgress the commands of Zeus.\footnote{3}

The politeness of an Homeric host required that he should feed his guest before he asked who he was. This is an excellent rule. For, in the first place, it is a tax upon one who is tired and hungry to have to talk at all; secondly, the host makes it plain that his kindness has no respect of persons; and, thirdly, if it should be an enemy that he is entertaining, he will find it more difficult to hate him after doing so.\footnote{4}

Gifts, as has been said already, were usual between the parties who entered into a formal relation of hospitality. But, besides this, some dole or gift seems to have been regarded as the right of any stranger as such. The value would, of course, vary with the importance of the stranger and the disposition of the donor. Odysseus at first expects to get some such gift even out of the Cyclops.\footnote{5} As a beggar he does get meat and drink from Nausicaa, but with the remark on her part that 'all strangers and poor are from Zeus, and a gift, though small, is welcome';\footnote{6} but, when his name and fame have become known to the Phaeacians, he receives\footnote{7} from the

HOSPITALITY (Greek and Roman) 811

there was a salary attached to the position, as we know from the Coinc. inscription, which contains an account of lands purchased by the State for the use of its ἑργατομοί. But in most cases the one to whom he was attached had to conduct himself by men of wealth and station, the attraction of international importance being reward enough in itself for the honour-loving Greek. Thus we find Aelius Galenus desiring the heroic support of the Laconidians, whose single criterion of praise or condemnation—

in classical times it was the backward country of Thessaly that was most noted for hospitality. Xenophon speaks of Polyclitus of Pharsalus as being ‘magnificent in the same way’ as the Thessalians. But we may remember, whose virtues in other respects were not conspicuous, had this redeeming feature in his character.

When Critio, in Plato’s dialogue of that name, wishes to get Socrates out of prison, and to send him to his friends in Thessaly, the philosopher is made to reply with some disparaging remarks about feasting in Thessaly, implying that he was of the same opinion as that afterwards expressed by the historian Theopompus, that the Thessalians were more anxious about a well-laid table than a well-ordered life. In other parts of Greece the practice of hospitality must have been rarer, if we may judge from the story of how Miltiades in the time of Pisastrates became tyrant of the Cerenes. Some Dolonians envied to Delphi had been instructed by the oracle to take as a new founder of their State the first man who offered them hospitality after they left the temple, and they traversed the whole of the Sacred Road through Phocis and Boeotia without receiving an invitation; it was not till they turned aside to Athens that Miltiades, seeing them as he sat in his doorway, sent a messenger to them to come in; and, after he had entertained them, they communicated to him the oracle, and pressed his leadership upon his acceptance. The importance attached to hospitality in unfriendly communities is due to that instinctive perception of the needs of men which underlies ethics. In a more developed society it becomes a rich man’s virtue, a kind of moral luxury, rather than a necessity. By Aristotle it is brought under the head of ‘magnificence,’ which displays itself, among other things, in the reception and disposal of strangers. Magnificence is a civic virtue, and the entertainment of illustrious guests is a glory to the State, on which grounds Homer has to remark: ‘recte enim est laudata hospitallitas.’ In the Economy of Xenophon, where the burdens upon the rich at Athens are being discussed, special mention is made of the social necessity of entertaining many foreign guests, and that too magnificently. The obligations of nobility in this respect were so well recognized at Athens that Solon includes a foreign guarantee among the
HOSPITALITY (Hindu)—HOSPITALITY (Iranian)

appanages of the rich and happy man, on a level with his elidren, horses, and hounds—

In the Meno of Plato also to know how to receive and dismiss fellow-countrymen and strangers in a manner worthy of a good man is reckoned among the accomplishments of an aspirant to public life.

Callias, the son of Hippocoon, was celebrated at Athens for his princely hospitality; and at Sparta, Lichas, who was παρακόπος to the Argives, but extended his welcome to all strangers who were present at Sparta in the Gymnasia.

ST. GEORGE STOCK.

HOSPITALITY (Hindu).—Under the conditions of Hindu law and social usage the exercise of hospitality in the ordinary sense of the term, when, the host shares with his guest a meal or provision which he has himself furnished, is necessarily precluded. A rigorous and minutely divisive law of caste has long forbidden in India that the stranger, or one not born within the inviolable and usually narrow limits of the caste (jati, birth), should be welcomed to a place at the family table. In this aspect of the subject, eating in common is entirely repugnant to Hindu feeling and thought; it is inconceivable and impossible that guests of different castes should partake together of the same food. And the rule or prejudice, together with that against intermarriage, will be among the last to yield to the solvent of European practice and example.

In all other respects the duty of hospitality is fully recognised, and, subject to this important limitation, adequately discharged by all Hindus. Probably no country in the world may the passing wayfarer be so confident that his needs will be met in whatever village he may find himself, although the provision will not go beyond the minimum of his requirements. Consideration for a guest is enjoined in the sacred Law-Books of India as an important part of the duty of a householder. It is true that it is generally assumed that the guest will be a Brâhman. In practice, however, the interpretation which has been given by the people themselves to their obligation has not limited it to one caste or group of castes to the exclusion of all others. The Brâhman has always had the prior claim for the supply of his needs, whether in respect of food or of aught else; but the demands of hospitality are not repudiated by whomever they may be presented, though these others will be entertained with less satisfaction and a considerable abatement of ceremony.

Further, condition which impedes the free intercourse and social communion which the dispensing of hospitality in the European sense of the term involves is that to the Hindu eating is a solemn and sacred religious act. Hence both the preparation and the partaking of food are hedged about with restrictions designed, in the first instance, to secure the ceremonial purity both of the food itself and of him for whom it is provided. To admit a stranger to a share in the meal, or even to allow him to partake of the provisions and acts of eating to be seen by another, would involve an almost certain risk of pollution. No strict Hindu will voluntarily and under ordinary circumstances eat otherwise than in private. A free and open hospitality, therefore, such as obtains in many countries, which invites the guest to an honoured place at the board, is from this point of view, precluded by religious sentiment no less than by social custom.

Apart, therefore, from anniversaries and festivals, and from private occasions for rejoicing, as a wedding or the birth of a son and heir, the lavish entertainment of guests on the part of wealthy natives of India, and of others accordingly, is limited to the feasting of Brahmans, and the making provision for the poor at an open meal at which all comers may receive a share; the only question asked. In the latter case the distribution frequently takes the form of a money dole in place of or in addition to the food prepared. All such acts and gifts secure for the donor religious merit, and are often thank-offerings for public or private good fortune or success. They are evidently also the expression of the nature of alms or charity, the recipients being in poverty and need, not of the hospitality, than of true hospitality (see art. CHARITY (Hindu)). The most recent instance of such donations has been the generous gifts for the poor placed at the disposal of Lord Hardinge, the Viceroy of India, in token of thanksgiving for his recovery from the attempt made upon his life at the Delhi Durbar of 1912. In the formal and elaborate feasting of Brahmans also the relation of host and guest is of a different nature. The sacred character of hospitality is exhibited in the relation places him on a level socially and religiously above that of his host; and the latter may not, and does not, eat until his guests have been satisfied; nor would it be in accordance with the sacred right that he should sit down with them to a common meal. Thus to provide for the wants of members of the higher caste is a sacred duty incumbent upon the Hindu householder which is repeatedly enjoined in the Law-Books. The obligation has often pressed hard upon the less wealthy members of Hindu society, and has been a not inappreciable or ineffective cause of the widespread indebtedness which has overtaken in the past so many classes of the Indian people. Usage and custom, fortified by religious sanction, has demanded an expenditure in the entertainment of guests at festivals or important events in the family life which has left the householder permanently and hopelessly impoverished; nor can real benefit be said to have accrued to any one from the practice, least of all to those members of the higher castes whom it has encouraged in a life of slothfulness and dependency. Nevertheless, the obligation has been generously recognised throughout the whole course of Indian life and history. And, if in part during recent years the responsibilities and duties have somewhat less scrupulously interpreted and acted upon, the result is due to the general loosening of the bonds of a social system which is found to be out of harmony with European conceptions, and incompatible with the relations of a world-wide Empire.

HOSPITALITY (Iranian).—The obligation and the duties of hospitality appear to be taken for granted in the Avesta and Pahlavi writings, and no word for 'hospitality' is recorded. At the

1 Of Mann, iii. 72. 'He who does not feed these five, the gods, the guest, the lord of the house, himself, and wife, lives not, though he harnesses; 10. 90. 1.' Let him offer, in accordance with the rule, to a guest who has come a seat and water, as well as food, garnished according to his ability. A Brâhman who stays unhonoured (in the house) takes away all the misfortunes of the house. A guest in the house of a Brâhman was always to be held in higher esteem, and given precedence in the entertainment of a member of a lower caste; the latter also was to be fed, but in this case hospitality was not obligatory, although apparently it was always received with pleasure and often with a sense of the duty of the giver. See Mann, iii. 108 and xvii and iv. 30, on the duties of a householder.

2 Ranga (Bunj-A., Dict., Bombay, 1900, col. 3220) gives as equivalent of 'hospitality,' leased-ol and xeal-in (occuring

A. S. GEDEN.
same time, it is indicated that, when one friend visits another, he is given hospitality (Yasa 118. 8). The duty of giving not merely contentment, reward, and thanks (zhviti, ari'y, eydvi), but also welcome (pordi-satki), to a right-handed guest is explained to Darmesteter, in Zend-Avesta, Paris, 1892-93, III. 70), to be one of the three earthly things best for Ahura Mazda; and the duties of friendship—which is scarcely possible without some form of hospitality— are mentioned in the Avesta (Yasa 38. 14, X. 1, X. 51; Vend. 44-46), with special reference to the obligation of friend to succour friend.

In a like spirit, generosity (firdās, rist) is lavished (Yasa iv. 5. 3, iv. 6, iv. 7; Pasr. vii. 3; Pars. vi. 3, and is the greatest of good works (Dink-i Mainyūd-i-Šrta, iv. 4. 44, IV. 4. 12, West, SBE xxiv. [1886] 26, 37), while illiberality is a sin (Dink-i Mainyūd, viii. 34; cf. Arta-i-Virāf Nāma, xxiii., ed. and tr. Hang and West, Bombay, 1922). More than this, the spirit in which the gift is made is made of the utmost moment. Accordingly, Navagistan, ix. 46 (ed. Sanjana, Bombay, 1894, fol. 161, i. 10-15, 162, i. 27; Darmesteter, Zend-Avesta, iii. 133 f.), declares:—

"To see him, spares Zaraštikha, who gives him when his need is felt, is better for him than to be lord over all kings for all time. In the corporeal world the decision for good thoughts and good words and good actions is the king of truth. Truth is what brings good fortune (Yasa 294, 1900, cols. 1444, 1423), adding that the best of all liberations (zād-kāyra) is to be the teacher of religious truth.

Of the actual forms of Zoroastrian hospitality we may have a glimpse in Yast xxv. 63-64 (expanded in Dink-i Mainyūd-i-Šrta, i. 147-148), which states that one should give the soul of the righteous murdered in the haven of Endless Light, it is met by the righteous dead (and by 'angels and archangels of every description'), who begin to ask it various questions, whereupon Ahura Mazda bids that it have food and rest after its journey, and a seat on a richly adorned throne. Even in hell the soul of the wicked receives food of filth before it is permitted to answer the questions of the older deities (Dink-i Mainyūd-i-Šrta, i. 183-192). Similarly, Arta-i-Virāf declares (iii. 16 f.).

"To give the hungry and thirsty food, is the first thing, and afterwards to make enquiry of him, and appoint his task."

It was customary for the host to rise when greeting a guest (iv. i. 1; Vend. xiii. 51). The Greek authors add practically nothing to the details of our knowledge of hospitality in ancient Persia, although there are repeated indications that wine was served to the guests, and even the courtesans were admitted to them (Herod. i. 133, v. 18; Xenophon, Cyrop. viii. 110, 10; cf. 150, 10). The host was presented to the Persian banqueters, as G. Rawlinson, Fifth Orient. Monarchy, London, 1892, ch. iii.; A. Repp, ZDMG xx. [1886] 101 ff., cf. also B. Brissou, de regio Persarum vulgaribus et dignis, Paris, 1883, pp. 101 ff., references to Persian banquets, etc.

By the best source for the details of hospitality in Zoroastrian Iran is the Sāh-nāmeh of Firdosī (tr. Mohi, Paris, 1876-78). The great majority of the instances describe, it is true, the scenes in royal circles and the receptions accorded to ambassadors, but there are also accounts which show that the hospitality of the humbler classes differed in degree rather than in kind.

In general, if the guest was in rank inferior to his host, he respectfully saluted him (l. 234, 257), whereas, if the two were of equal rank, the host respectively in Yasa iii. 9 and xii. 2), but both words mean simply 'one wishes,' 'to be at home to one.'

The statement of Kohler (ETW of Yasa [1884] 206, note 2), that the Massegires, who were an Iranian people (J. Marguer, Firdosī, Berlin, 1901, p. 126), showed hospitality by lending them their money, is an erroneous interpretation of Herod. i. 216 (cf. Strabo, p. 518), who says merely that these Iranians practiced commensal marriage.

When the king learns that Rustam is approaching, he leaves the palace, while the people prepare feasts, adorned by wine, music, and singers. The monarch, with a great retinue, proceeds, reaching large groups of the population until he reaches Rustam, who dishonours and insults him. Xusran embraces him and causes him to remain, and they return, conversing, to the palace. There Rustam is seated beside the king, who converses with him and his companions. Xusran follows the banquet, with wine and music. For a month the festivities continue (in other cases hunting and games add to the enjoyment), and at the end of that time Xusran announces his wish to depart. Therefore, Xusran bestows rich presents upon him, and accompanies him a two days' journey, when Rustam again discourses, and takes formal leave of the king, who returns to his palace.

Among the middle classes the usages were not dissimilar. Bahram Gur (v. 450-459), the king, with an eye to the door of a jeweller. He is at once welcomed most hospitably, and is entertained at an impromptu feast, after which come wine and music, the cupbearer and lute being the host's hired servant, whom the guest, whose identity is known only on the following day, promptly espouses (v. 506-511).

In the Persian stratum of The Thousand Nights and One Night (tr. Payne, London, 1886-84) are a number of descriptions of hospitality as recorded by Bedeckh under the Abbadadi dynasty (q.v. 1. 74-85, xi. 8, 47-48). These throw a welcome sidelight on the descriptions in Sāh-nāmeh; and both works were composed in Muhammadan surroundings, it is probable that they contain in their accounts a considerable amount of genuine Iranian material.

The humblest classes were equally hospitable, as is illustrated by the adventure of Bahram Gur with Labuk, the poor water-carrier, and the rich Jew, Barahama (Sāh-nāmeh, v. 450-459).

It was the habit of Labuk to devote half the day to his calling, and then to seek a guest; and it was his principle to have nothing left over for the next day. Having discouraged the people from purchasing from Labuk, the king rides in disguise to his house, where he is warmly welcomed, and, after a game of chess, is entertained at table, the meal being followed by wine. Bahram passes the night as Labuk's guest, and even at break of day is not asked to remain another day. Since Labuk is still unable to sell water, he parts with some belongings and purchases wine, which he himself prepares for his guests. The third day he urges Bahram to remain, and promises his water-bags for the meal which he prepares; and it is with reluctance that Bahram leaves him. He receives an unknown guest to depart on the fourth day, after having urged him to remain two weeks longer. Bahram next takes the hospitality of the rich Jew, only to be received with niggardliness and ingratitude; and he therefore beseeches on Labuk the wealth of Barahama (for other instances, see v. 367-396, 435-439) (where the hospitality of the host is contrasted with the inhospitality of the husband) (v. 145 f.).

On the other hand, the vice of inhospitality also existed, not only among the poor (v. 489 f.), but also among the miserly rich (v. 519-523).

In Dailam (corresponding roughly to the modern Gilan), it was customary for all the household to withdraw excepting one, who, at a distance, waited upon the guest, who could thus savour his lunch and thirst, the host so carefully venturing to appear even at the conclusion of the meal (Qādiz-i-nāmeh [11th cent.], xii. 3, tr. Querly, Paris, 1883, p. 215). To this al-Makdisi adds that it was not the usage in Dailam to sell bread, but that any stranger might enter a house and get what food he needed; while Ibn Fadlan records a similar custom among the Arab tribes in the desert, and in Arabic anthologies the Persian word for 'guest' is rendered 'master of the whole house' (Inonoswey, 74aknjasysies yfersyed, St.
Petersburg, 1900, p. 182 f., and the references there given.

Modern Iran is so thoroughly Muhammadanised that it is difficult to distinguish between Iranian and Islamic elements. Nevertheless, the following account of hospitality is typical of ancient Persian hospitality. Iranians are descendants of the primitive Iranian people—and the Kurds—may be cited from Soane's *To Mesopotamia and Kurdistan in December, 1909*, p. 153 (1):

'...they told me that the best room in the place was at my disposal. They promised nothing enough of the world's goods, but their best rice was sacrificed to the occasion, eggs in numbers sufficient for ten men were produced. Every one of them except the headman, who sat by as host, bowed himself about something. ... Surplus eggs they hard-boiled and put up for my journey next day.' Somewhat discredit the evidence of a young tradesman and his wife to pass the night in the same room. Soane was informed that this was not unusual, since the whole village possessed but two rooms fit to sleep in; and since he passed for a Kurd, and a guest, I must excuse their presumption in occupying the room, which was my exclusive property.' Early in the morning he was awakened by his host's wife, who brought him a dish of the most delicious food.

The spirit of unlimited hospitality appears in many passages of the most ancient sources. When Oh-yama-ta-ni-no-kami, god of the Great Mountain, was visited by the divine prince Ninigi, the grandson of the gods, he offered him 'merchandise carried on tables holding an hundred' (Kojiki, tr. Chamberlain, new ed., Tokyo, 1906, p. 141) to the god of the Ocean. Oh-wata-tani-no-kami, saw Ho-wori-no-mikoto (His Augustness Fire-Subside) at his door, he immediately 'led him to his table. His table was the highest. ...' The leading eight layers of rugs of sea-salt (salt) beneath the floor, and spreading on the top other eight layers of rugs, and setting on the top of them, arranged merchandise on tables holding an hundred, made an august banquet, etc. (ibid. 140).

In these two texts, the reception is preliminary to a marriage, and it has been thought that the present thus afforded were a sort of dowry given by the father; but we see from a variant of the first account, which says that the god of the Great Mountain 'sent his two daughters with one hundred tables of food and drink to offer them respectfully' (Nihongi, I. 84), that it was, in the first instance, a question of presents of welcome and the classical meal of hospitality.

Another legend, which is peculiarly significant, shows us Susa-no-wo, the Storm-god, after he has been expelled from heaven because of his crimes against the Sun-goddess, wandering about the earth under a huge hat and a cloak of green grass in search of a shelter for the night (cf. Nihongi, l. 80). In his distress he asks a rich miser, Kyotan Shorai, for hospitality; but the miser's elder brother, Somin Shorai, though a poor man, makes a bed of millet-straw for the god and gives him some cooked millet to eat. The god goes away. Some years afterwards he reappears.

Are your children at home?' he asks Somin. 'There are ten of them,' is the reply. 'My daughter, and my wife.' The god replied: 'Encircle your loans with a belt of rushes.' And that very night the god exterminated a number of Somin's household, except Somin Shorai and his family. Then he said to Somin: 'I am the god Susa-no-wo. If any infectious disease should break out, let your descendants tell their name and girdle their loans, and they will be spared.' Hence, it is said, the New Year custom of hanging a cord of straw (shime) over the doors of the house to avert pestilence and other diseases from crossing the threshold. This tradition, which is found in a very ancient work, the *Bingo Shoki*, *Topography of the province of Bingo* (see Flores, *Nihongi*, *Zadattai der Götter*, Tokyo, 1901, p. 312), and exists to this day in the locality (see Murray's *Handbook for Japan*, ed. 1884, p. 177), shows clearly what an extent hospitality was considered a sacred duty.

2. Historical period.—Passing now from the primitive period and its legends to the historical period, we find the custom of hospitality integral in the dealings of the Japanese with strangers to their archipelago. No doubt, following a universal habit (Fraser, *G.B.* p. 160), they took certain steps to secure themselves from the depredations of the Japanese, which the strangers might bring with them; thus, two days before the arrival of foreign vessels in any port, a ceremony in honour of the Shafe-no-kami, 'preventive deities' of a phallic description, to ward off evil influences (Engi-shiki 10th cent., *shoki*. 18).

Nevertheless, the Japanese attitude towards strangers was by no means hostile; it was with a kindly curiosity that they saw strangers come among them, and they offered them a house. All ancient Japanese history is full of accounts of how the court gladly welcomed the Koreans, who brought interesting innovations with them—to enumerate the instances would be to relate the whole development of Chinese civilization in Japan, from the introduction of writing (Kojiki, 313) down to the introduction of Buddhism itself (Nihongi, ii. 64 f.). Even the national gods exhibited a hospitality to foreign gods, and even before the introduction of Buddhism more than one Korean deity had been admitted to the Japanese pantheon (see Kojiki, 324; Nihongi, l. 169).

The same welcome was accorded the Europeans when they in their turn presented themselves to the distant shores of the Portuguese, i.e., in the land of Japan, first at Jingu-uni in 1641, then at Tane-gashima in 1649, were received with kindness (see H. Nagaoka, *Histoire des relations du Japon avec l'Europe aux environs de 1600*, Tokyo, 1895, p. 33, 36, etc.). St. Francis Xavier, who landed at Kagoshima in 1540, was very courteously received by the prince of Satsuma, even although, he was the bearer of a foreign religion. At their very first interview, the prince gave him permission to preach the Christian faith in his territory, and, a few days later, sent out letters-patent in virtue of which all his subjects were at liberty to become Christians if they so desired. As a matter of fact, this local prince was not entirely satisfied: he was anxious to enter into relations with the Portuguese and to win over their vessels with a view to commerce, as was clearly shown by the fact that his attitude entirely changed when the saint wished to leave his territory. It cannot be denied, however, that the prince's first welcome was a really generous one—especially if we remember all the difficulties he might have had to
HOSPITALITY (Japanese and Korean) 815

face with regard to the bouses. The prince of Hirado affirmed that St. Francis Xavier was with much affection and a good grace, to use the saint's own words (Letter of 1651). Then at Yamaguchi, the prince made the saint come to him, questioned him gravely and with much respect, and told him where he came from and what he wanted, listened to his doctrine for a whole hour, and allowed him to construct a mission church. But this quick and short visit seemed insufficient. A little later he presented the saint to a vacant monastery, and published it abroad throughout the kingdom that he had authorized him to propagate his faith. Even in Kyoto, the capital, though St. Francis and his companions could not get an audience of the Emperor, the shogun, or even the chief of the Buddhist Church, yet they were never molested. Finally, the prince of Bungo, the last of the federal princes that Francis had occasion to visit before leaving Japan, wrote letters to the saint saying such things as:

"I beseech you to come immediately, before the sun rises, and knock at the door of my palace where I shall await you with intercourse. . . . Give me news of your health so that I may sleep well throughout the night, until the cock awakens me and reminds me that you are coming." (Bouhours, Vie de St. François Xavier, Paris, 1823, ii. 64).

In short, during the two and a half years which the first apostle of Christianity passed in Japan, he was treated with a tolerance and good-will which would have astounded Europe; and this explains the delusion which sprang up in his mind that he had been unjustly and so fallen into disfavor would easily be won to Christianity" (Bouhours, ii. 38).

The persecutions which Christian missionaries had to suffer later do not prove anything against the hospitality of the Japanese government. In 1633, the Jesuit Fathers Proes and Vilela were received with honor by the shogun Yoshiteru himself. In 1608, when Father Organin arrived at Nagasaki, the shogun's viceroy, who had not been able to give them shelter, made a complete falsehood about the disposal to stay in, and offered him banquets for three days. Why did this same Nobunaga afterwards regret giving this protection to the new religion? And why did Hideyoshi, his successor as dictator of Japan, after first taking the Christians under his protection at Osaka, finish by harshly persecuting Christianity? Because the missionaries made the mistake of involving themselves in the local politics of the feudal princes, causing trouble among the people as a consequence, and finally disturbing the central government. But, in the same edict of 1637 which ordered all the missionaries to leave Japan within twenty days, Hideyoashi decreed that the 'black ships' (i.e. the Portuguese) which came for purely commercial purposes might continue their traffic; and, in another edict of the following year, he recommended his subjects to continue to receive them well (see Saganuma, Dai Nihon Shakyu-ki, His. of the Commerce of Japan, pp. 294-298). Finally, Hideyoashi's successor, the great Shogun, Tokugawa Ieyasu, who had also begun by showing himself friendly to the Christians, was forced, by new intrigues of the Portuguese Jesuits and Spanish Franciscans and Dominicans, to withdraw his good-will and to decree, in a proclamation of 1614, that 'these must be instantly swept out, so that not an inch of soil remains to them in Japan on which to plant the 'black ship' (see H. Tomlinson, Review of the Introduction of Christianity into China and Japan, in T. S. i. p. i. [1888] p. 49). These measures culminated finally when Ieyasu, the third Tokugawa, issued his highly important edicts of 1633 and 1638, laid Christianity under the ban.

The fact that the religious politics of the Japanese seem to have been an exception to their proverbial hospitality, it was only so at the time when the Roman Catholic missionaries, forgetting discretion in their zeal, abused this hospitality. The Japanese were willing to be convinced; they would not be conquered. The necessity of defending themselves against this religious invasion had the additional effect of calling forth, in the above-mentioned edicts of Ieyasu, a limitation of the commercial relations which seemed indispensable for the general tranquillity of the country and the solidity of its government. For political reasons, this distinctly legitimate considerations of public safety, did not prevent the Japanese from offering hospitable treatment to the foreigners who came for the single purpose of engaging in commerce; this explains why Holland had almost the monopoly of foreign commerce at Nagasaki till the Revolution of 1868.

3. Modern period. In the modern period the same spirit may be observed. The Japanese Government employed every means of protection against dangers from America and Europe; it confined the residence and commerce of foreigners to certain open ports and required passports for journeying to the interior, in order both to keep a watch over their movements and to obtain from the foreign powers, in exchange for a more complete freedom for their subjects, the abnegation of the unjust treaties that had been imposed upon them since 1864. When this diplomatic end was attained, i.e. at the end of the year 1899, Japan was opened up anew to foreigners under ordinary conditions. As for the ancient prohibitions against Christianity, they had long been forgotten. So, as early as the Japanese, continuing as of old, to welcome all religious novelties, provided they do not cloak political schemes. The history of Japan, then, exhibits a remarkable spirit of hospitality and of tolerance to foreign inhabitants, in spite of the opposite impression made by a superficial observation of the anti-Christian persecutions; a knowledge of the causes of these persecutions reduces them to a vanishing point, and shows the Japanese character in its true light.

To-day a foreigner travelling in the interior of the country may still find the ancient hospitality, which was never eclipsed except by the fault of those who were the first to profit by it. The present writer can bring his personal experience to witness. One night in 1896, when travelling in Yamato, he found himself lost in the open country. After walking for a long time in the dark and in drenching rain in search of a village where he might find a means of transport, he arrived at a peasant's hut and knocked at the door. Imagine a Japanese travelling in the country in Europe, and arriving at midnight at a peasant's house: there would be furious barking from the watch-dog, hostile suspicion of the unknown wanderer on the part of the master of the house, and, to put things at their best, a poor shelter offered at last, with no good grace, in some out-house. The Japanese cottage, on the other hand, was opened immediately; the father and his family all got up to receive the stranger on their knees; they were very pressing in their offers of a bath and a friendly meal. After this came the classic questions in Homerian style: 

'Honourable stranger, whence comest thou? Whither goest thou? What is thy country? and so on. Finally, when the guest was ready to depart, the father sent two of his sons several miles distant to bring a jinrikisha and runners to carry him to Kyoto. It is hardly necessary to add that these poor peasants would not take any remuneration, and the only way in which their generosity could be repayed at all was by discretely making presents to the youngest members of the family.

II. KOREA. Korea, on the other hand, is quite different. This country, so inaccessible to the foreigner, has been well named 'the hermit nation.' The accounts of missionaries, from the Relazioni de
HOSPITALITY (Semitic).—Hospitality among the Semites and Eastern peoples in general rests upon religious sanctions (see EBB 7:230). ‘To be inhospitable was not only to be despisable, it was also to be irreligious. Hospitality was a sacred duty’ (Thy, Social Life of the Hebrew, p. 170).

1. IN BABYLONIA AND EGYPT.—a. Religious aspects.—Hospitality was practised by the gods themselves. According to the myth of Adapa, food and water of life, garments, and oil were brought to the hero when he arrived before Ann. Acting on the advice of his father Ea, who feared that the food and water might tend to death instead of life, Adapa refused these, but accepted the garments and oil (R. W. Rogers, Cuneiform Parallels to the OT, New York, 1912, pp. 68, 74-76). It was incidentally that part of the ritual which was connected with the offering of life to the gods, and by the cult of the dead, which at the outset required that hospitality should be rendered to the corpse in the form of decent burial, and was continued in the supply of food and drink to the deceased. According to the Book of the Dead, the heart which is righteous and blameless addresses the gods of the underworld thus: ‘I have given bread to the hungry man, and water to the thirsty man, and appear to the naked man, and a boat to the (shipwrecked) mariner. I have made holy offerings to the gods and sepulchral meals to the gods (R. A. W. Budge, Book of the Dead, 1914, p. 175).’

A Bab. didactic poem enjoins: ‘Give food to eat, give wine to drink... With him whom thou shalt set at his table, he is pleasing to Shamash, he will requite him with good.’ (Rogers, p. 179.)

b. Social aspects. Hospitality was practised by the community, among those who dwelt together within the walls of the same city. The Egyptians were a pleasure-loving people, and scenes of feasting and banquetting figure in their pictorial remains. The Babylonians and Assyrians, while more staid, also held festive assemblies. As early as the days of Hammurabi (circa 1800 B.C.) we read of laws for regulating wine-shops (Code, §§ 108-111), with evidence that conspicuous might be carried to excess (§ 109). The penalty of exile from the city

§ 154 implies that the fugitive was placed out with the horses of the State (cf. Gn 41). The curses attached to the budurru, or boundary-stone inscriptions, reveal the same disability in one who has been guilty of violating lands and stables, even while he continues to live within the city: ‘Like a dog (may he) pass the night in the streets of his city; meeting angry faces and holding up his head, may he wander through the streets of his city’ (W. J. Blaikie, A New Boundary Stone of Nebuchadrezzar I, Philadelphia, 1867, p. 60).

3. International aspects.—We are indebted to the Tell el-Amarna Letters for a life-like picture of international relations in the middle of the second millennium B.C., with numerous indications of hospitality, or rather its opposite. (a) Kings did not themselves travel into the countries with which they held intercourse, but sent their ambassadors, and gave hostages, the hospitable reception and treatment of whom was essential to the maintenance of friendly relations. There is clear evidence that considerable strain was put upon the patience of one of the parties by detention of ambassadors, lack of information regarding those given in marriage, and especially shortcoming in the matter of presents. Bubaburash, king of Babylon, apologises to the king of Egypt for not having replied to his envoy at his own table, and given him food to eat and wine to drink, on the ground that his health was not good at the time. He further reproaches the king for sending him, king of Egypt, because he had not comforted him in sickness, nor sent an envoy to inquire after his condition (Tell el-Amarna Letters, Berlin, 1; cf. 2 K 25.24). At this state accompanying a national intercourse is the transit of images of the gods, that of the goddess Ishtar travelling into Egypt (ib., London, 10), while some time later (15th cent.) that the Egyptian goddess travelled to the land of the Hittites to effect the cure of the king’s daughter. It goes without saying that the images were to be honoured, and that those who attended them were to be hospitably treated. The image of the great Amen himself journeyed with Unamon to Phonicia (c. 1100 B.C.), but in the decay of Egypt’s power failed to win respect as aforetime and a favourable reception for the envoy. Probably the first state visit on the part of a king is that chronicled of Khattushil II, king of the Hittites, who journeyed to Egypt (c. 1396 B.C.) to attend the marriage of his daughter to Rameses II (H. R. Hall, The Ancient History of the Near East, London, 1913, p. 371 ff.). (6) The petty rulers of Palestine and Syria represent their discharge of the obligations placed upon them by the king of Egypt as hospitality. Akizi of Karna gave to the king’s soldiers food, drink, oxen, sheep, honey, and oil (Tell el-Amarna Letters, London, 36). Aziru, the rebel son of Abd-Ashtars, professes to have treated Hani, the envoy of Egypt, with due respect, lending him horses and asses for his journey, while his brethren supplied him with cattle, sheep, fowls, food, and drink (ib., London, 30). The faithful Rib-Addi of Byblos reports that upon returning from Beirut to his own house he found it barred against him (ib., London, 16).

(c) To traders a measure of hospitality was extended. After the conquests of Thothmes III there were good roads made throughout Syria, furnished with post-houses where food and lodging could be procured (E. Sayce, Syria and Palestine, London, 1915, p. 190). ‘Traders availed themselves of these routes, and travelled securely. Later, when the land became disturbed, caravans were plundered and merchants robbed and slain (Tell el-Amarna Letters, Berlin, 7 and 8).

(d) Akh, a king’s messenger, on the way to Egypt, bears a passport (ib., London, 58; cf. Neh...
HOSPITALITY (Semitico) 817

A postscript to one of the cuneiform letters found at Nuzi (dated 14th cent. B.C.) reads

\[ \text{dayu-mu me4ru, "Highway, Highway"} \] (i.e. for the interpretation) (Rogers, 383; cf. J. B. Paton, Syria and Palestine, London, 1902, p. 36 f.)

4. Hospitality towards tribes and peoples.—In the Tractate Sota (20b) the rabbis declare that "the king claims to have sheltered the people of Malgi in misfortune (col. iv. 11-13). Such royal hospitality is seldom disinterested. Thus, Semacherib eralit Padi, king of Elam, 4-11. The Cylinder of Cyrus represents this king as a benefactor to Babylon and its people (1. 52 f.).

5. Hospitality to nomads.—The desert tribes, who in later times afford the most evident instance of the virtue of hospitality, at this epoch appear rather as marauders, a scourge to settled communities and to traders (especially in the Tell el-Amarna Letters). Yet the Egyptian government was at times tolerant to them, as appears in the permission given to the Mmittis, or nomads, to settle in a prescribed district (reign of Horemheb, XVIIIth dyn.), and to the Shasu, or Bedawin, to possess parts of the land of the Pharaoh, Menepthah II., "to feed themselves and to feed their herds" (Sayce, The Higher Criticism and the Texts, London, 1894, p. 340 f.).

6. Hospitality to exiles and emigrants.—The extent to which hospitality was shown to fugitives and emigrants may be judged from the letter of Amenemhat IV. to Achrn (Tell el-Amarna Letters, London, 75), in which whole families are mentioned, and also from the terms of the Hittite-Egyptian Treaty (Hall, 960, 365 f.).

7. Hospitality to strangers.—Three outstanding instances of hospitality (with elements of inhospitality) accorded to travellers, real or fancied, are furnished by Egyptian tales.

The most instructive instance of this kind is that of the noble Sancha or Sinu (XIIIth dyn.; c. 2000 B.C.). A fugitive from Egypt, he was preserved from death by the hospitality of a Bedawin, who gave him water and boiled milk. For a time he sojourned with the nomads. Thereafter he was received by a prince of the Upper Tenam (perhaps Syria), Ammannahab by name, who made him tutor to his children, and gave him his eldest daughter in marriage. He appointed him to rule over part of the kingdom and commander of the army. He had daily rations of bread, wine, boiled meat, and roast geese, as well as the privilege of hunting game. This kindness reacted on his own practice:

- "The messenger who comes from the court of the petition of abode, I gave hospitality to every one, and I gave water to the thirsty; I set on his journey the one who was hindered from passing by (A'. E. Evans, Life in Ancient Egypt, 3, Oth, London, 1894, p. 276 f.; Sayce, Pritchard's Pictures of Palestine, 178)."

Towards the end of his life he was permitted to return to Egypt, and was graciously received at court.

The coarse garments of the Bedawin were exchanged for fine linen; his body was bathed with water and scented essences; he lay down more on a couch and enjoyed the luxurious cookery of the Egyptians. A house and pyramids were built for him; a garden was laid out for him with a lake and a kiosk, and a golden statue with a robe of scarlet was set up in it (Sayce, 179; cf. Hall, 171 f.).

The Tale of a Mouse is a narrative relating to Syria and Palestine in the reign of Rameses II. (XIIIth dyn.; 13th cent. B.C.). Our interest is in the evidence of inhospitality (the hospitality being described as "loosely satisfied. At every stage Nature shows herself inhospitable; and terror, from wild beasts and from man, always seems to oppose the traveler. His clothing is stolen by thieves and his grooms desert him and join the robbers. Some time later, when he comes to Joppa, the maiden who keeps the garden proves his undoing. Here his bow and sword are stolen, his quiver and armor destroyed."

"Prayer does not avail thee; even when thy mouth says, "Give food in addition to water, that I may reach my goal in safety," they are deaf and will not listen. They say not thy words" (a translation of the whole, see Sayce, 180 f.; cf. E. A. B. Budge, History of Egypt, London, 1905, ii. 118; cf. Fr. 1927, B. 2115, 3 Oct 1500.)

II. BIBLICAL (OT).—So far as the externals of hospitality are concerned, the Biblical data fit in with the record from other sources. It will be convenient to observe the distinction between sokebi and gvr, the former the stranger who is merely passing by, the latter the stranger who acquires a settlement, with certain civic and religious rights, in the land of adoption. It is with the sokebi rather than the gvr that we are here concerned. While all the categories named above might be repeated for the OT, the clearest examples of hospitality are afforded by private and individual instances. The hospitality of the tent and of the city are found in proximity to each other (Gen 16, 9-13 19-24).

With the help of allied passages (Jg 19, 1 S 25, 2 S 12, 1 K 17, etc.) the various stages may be clearly realized. They include: reception (meeting and obeisance), offering of food and drink, and in certain circumstances a feast (an animal, e.g., a calf or a kid, being kindled, foot, invitation to rest and to tarry all night, provision of food and drink, and in certain circumstances a feast (an animal, e.g., a calf or a kid, being kindled, and dressed; bread, butter, milk, and wine also being set before the guests); feeding and housing of animals (asses and camels). Guests were kept inviolate, even as the sacrifices of the honour of the daughters (Gen 19, Jg 19-24). No remuneration was taken, although, when a visit was of set purpose, presents were brought (Gen 24, 43; Job 42, 5). Abraham even went with his guests to bring them on the way (Gen 18, 9).
While hospitality was accorded as a rule, there were departures from it (Jg 19:5). The open space about the city gate was the only inn available in the event of no private house being offered. It was against the laws of hospitality to leave a stranger in such case (Job 34:17), and thus there was probably little hardship entailed in having to pass the night in the open. Travellers took cover under the porches and porticoes (Jg 19:15), which were hubristically in the event of host being found (v. 21). On the road to Egypt they halted at stages (inn or lodging place, Gn 43:20; Ex 16:23), where shelter, and perhaps water, but no food, were to be found (cf. Jer 9:1). The instances in Nu 20:20 and Dt 23:24 show that even water was paid for.

This, however, is an extreme case. Even among those who are blood-relations the ordinary procedure in respect of hospitality is observed, as, e.g., when Abraham's servant journeyed to the home of Rebekah (Gn 24:33, 35). The meeting is that of friends, the narrative working up to the disclosure of relationship, which, of course, produces a great change (v. 24), cf. Gn 26:31-34. Even in such circumstances hospitality is not accepted till the errand has been told (Gn 24:7).

A unique instance is the stated hospitality extended to the prophet Eliashib by the great woman of Shunem (2 K 4:42). As often as he passed by he was turned to eat bread, and in the end had a furnished chamber reserved for his use. This instance is further instructive for the lead taken by the hostess, which recalls the more public part played by women in early times as contrasted with later (Gn 19:24; 21:8; Ex 2:21; Job 1:5). The act of Jeael (Jg 4:17) is to be put by itself as a gross breach of hospitality, notwithstanding the fact that it is justified upon national grounds by the writer of the book of Judges (Jg 4:11). In the eyes of the later Semites such a deed would have been reprobated, and such advantage would not have been taken even of an enemy, once the food-bond had been established (W. Robertson Smith, Kinship and Marriage, London, 1903, p. 176 ff., Bod. Sem. 4, do. 1894, p. 209 ff.). This instance may be set over against Rahab's kindness to the spies (Jos 2), who, in virtue of their hostile mission, could lay no claim to hospitality (cf. Gn 49:30).

We are reminded of the tale of Semechah in the experience of Moses (Ex 2:22), who, coming as a stranger, tarried with the priest of Midian as one of the family. Like Lot in Sodom, he represents the gef at an undeveloped stage.

In the OT the instances of kindness to individual strangers completely overshadow the national and kingy aspects of hospitality. But examples of each are found. The sons of Jacob participated in the hospitality of the Egyptians, although national prejudice required that they should eat bread by themselves (Gn 43:32) and dwell by themselves (46:32). In the wilderness the Israelites were denied the minimum of hospitality by the kings of Edom (Nu 20:19) and of the Amorites (21:2). David, as an outlaw, was the recipient of kindness from Abigail (1 S 25), the king of Moab (29:3), and Ahab, King of Gath (29), and, as a fugitive before Absalom, from certain prominent families dwelling on the east side of Jordan (1 S 17:724). On the other hand, his envoy, sent with hospitality intent to the court of Hanan of Ammon, were shamefully treated (19:9), which led to a dire revenge (12:13). The visit of the queen of Sheba to Solomon (1 K 10:12) is an example of sovereigns standing towards each other as guest and host. A king accepts a guest to a refuge prince to it is in more clear:

Merodach-Baladan is born of its glory by the prophecy of Jeremiah (Jg 19:22).

Hospitality is but rarely marred by deceit in host (S S 15, 1 K 13:33; Pr 23:25) or guest (13:26), or by ingratitude (Pr 41:9); contrast 2 S 9, 1 Ch 6:49. Ruth (Pr 9:4), but there was the possibility of debasement (Pr 9:7), especially when luxury was in fashion (Am 5:25), and this long remained a threat (Pr 23:24, Dn 6, Est 1).

Some code of hospitality necessarily underlies the political alliances during the monarchy, while trade and commerce imply toleration of, and fair dealing towards, foreigners, and perhaps some measure of kindness.

HOSPITALITY (Tentonic and Balto-Slavio),—

The ancient records furnish the clearest indications of a widely diffused practice of hospitality both among the Tentonics and among the Slavics. As regards the Germans, Caesar (de Bell. Gall. vi. 23) writes: 'Hospitalitatem et rerum jam ad usum publicum fieri addidisse, ut ad veterrimen adnitus publicus, ab impositi bus, beneque eum ad modum domesticum patris vivendi communi/ziisse' (13:31), while Tacitus (Germ. 21:31) says:

'Convictuibus et hospitibus non solum usus indicatur. Quod in aliis partes hodiernae regiones fuerat ubi vacuus habitatus, pro hospitibus sine aliqua appariato spolias excipi. Cum defensor, qui proficiens hostes et hospi terrae hostem constigisse domum non invitat advenus. Nec interesse: par humanitate accipiet.'

Of the Slavs, Mauriutus (Strat. xi. 8) speaks as follows:

'Ne stotiatu bion kastalum, et ab eis teram elanes mias nove filia mi, k homeowner accusandus est, ut eis ad novo pecuniarem fiet aliis hostis laetitiae locum esse.'

The Latins had even a special god of hospitality, called Cerulius ('Ue hospitality deus cui ex omnibus locosis aequulam, primum ex populo indiges hostus servatur libatibis plebis'); cf. H. Ussener, Deidemur, Born, 1890, p. 180. Tentonics and Slavics have another point of contact in the fact that they have a common term for 'guest,' the Goth. gast, grad (gastigd, grad; guest-gast, grad-gast); the Old Slav. gost, 'guest,' and both being etymologically equivalent to the Latin hospes, 'stranger,' 'enemy.' The Lith.-Lat. Lett. Latene have a different term: Lith. gesnat, 'to be one's guest,' esanc, 'guest' (fem.), Lett. eisan, 'guest,' which are all connected with the Lith. hostes- (cf. Gr. hgos, Lat. hoste). Should the question be asked how, in the case of the Goths, O. Slav. gost, a word meaning originally 'stranger' or 'enemy,' (cf. Lat. hostes) should gradually acquire the sense of guest,' the answer will be: And in the practice of exchange of gifts, met with everywhere (see Aryan Religion, vol. ii. p. 51; and Gifts, vol. vi. p. 197), and, in particular, on Tentonic and Slavico, in the closest connexion with the practice of hospitality, and which, as the mutual gifts had to be in some degree commensurate with each other, has been aptly called 'giving and exchanging;' or in most cases of presents.' Tacitus, in the chapter already cited, expressly says: 'Ab omnibus a deo poposserunt, cedebant moris, et poscebant invicem sedem facilidades;' and the Aryan adds: 'it is to a men more clear:

No one is so hospitable or ready to give that he despises presents; Nor so little mindful of gain that he hates return-gifts.'
Here, too, we have the reason why in Old Russian gost' is quite commonly used for 'merchant' (hospes), while gosti's means 'to trade,' and gosti's is the form of the noun.

While the stranger thus literally found an open door because of the wares he carried, we are able to derive from the facts of language a still more precise idea of the way in which a relation between the visitor and his host attained its further development. In the Slavic languages the word gost' (from gosti-pod'—corresponding exactly to the Lat. hospes) is now for the most part used for 'God,' but originally meant, quite generally, 'master' or 'lord.' The second element of the primitive root is gos'te-s (Skr. gos'te, Gr. gos'te, Goth. gōs'ta), 'head of the house.' The Slav. gospodi, Lat. hospes, accordingly mean 'master of the stranger'; and this implies that the guest, during his stay in the house of its entertainer, enjoyed equal privileges with the members of the family. In order to enable us to realize what such friendly treatment meant for a traveller and the day's journey, we may quote here a statement regarding Albanian hospitality, taken from a work entitled Bich Reise durch das Lesbosland of the famous Konrad der Balkanhalbinsel, ed. C. Fatchesch, pt. 1, Vienna and Leipzig, 1904), by K. Steinmetz:

"Their hospitality, which is unrivalled, may be extolled as the finest of all the arts of the Greeks. The hospitality of the Albanians do not have is in the same degree,—and is of itself sufficient, without going into the details concerning the lavishness of their banquets, that the Albanians often expressed by other travellers. It is not confined to the table, engaging the stranger and of regarding a payment as an insult; it goes much further than that. If I eat a mode of bread in a house, drink a cup of coffee, I once offered a friend a glass of wine, I once offered a friend a glass of wine (NOT, i.e. Lat. amicus) at the house, and if on my further journey I am robbed or ill before I arrive as another house, the family a whole will not rest till they have avenged the dead. If I am on a highway, accompany only one man, was able to pass through the rusted tribes without danger; for any possible assailant who might think of robbing or killing me knew that he would thereby expose himself to the most determined vengeance on the part of the household with which I had last journeyed.

It thus appears that the family of the host, and especially, of course, the host himself, accept responsibility for the safety of the guest, and, further, that this responsibility is not limited to the time during which the stranger sojourns with the family, but lasts while he is on his way to other quarters. This is evidently what finds expression in the above-quoted references to the hospitality of the Slavs and Germans, as, e.g., when Mauricius, speaking of the hospitality of a certain tramp, says: "If any one shelters a guest (a merchant, or other person who has come across the boundary) for three nights in his own dwelling, and also feeds him with his own food, and further, if he does not injure another person, let that be the charge which is legally due" (C.F. Liebeschutz, Der Gesetze der Apostelkirche, 1896, p. 121).

From all this it is clear that the practice of hospitality—as a designation of which the Russ. chel'so, 'bread-salt,' derived from the ceremonial presentation of these articles of food at the reception of a guest—ought to be referred to—was of immense significance for the development of the intercourse, and, in particular, of commerce. It was likewise the starting-point of the entire hospital system of Northern Europe, special quarters for travellers being provided in the larger houses much visited by strangers, and more especially in the monasteries; and, when we speak of hospitality's sake, its came in time to be done for payment. All the Teutonic languages have a term for 'guest-house': O.N. gosti-hús, O.H.G. gast-hús, A.S. gast-hús; and O.Fris. gosti-hús, A.S. gesi, a word of obscure origin. In the Slavic tongues we find O. Slav. gospoda, Czech hospoda, etc., 'lodging;' which are derived from gosti-pod' (cf. gosti above), and originally 'protection of and lordship over guests.'

On the traces of the practice of lending a wife to a guest, see art. Cittestrav (Teutonic and Balto-Slavio), vol. III. p. 489.
HOTTENTOTS.—1. Origin and migrations.—
At the time of the discovery of the Cape of Good
Hope and its occupation by Europeans, the S.W. corner of the African continent was found to be in
the occupation of two distinct peoples, known to
us as the Bushmen and the Hottentots. Of these
the Hottentots were the dominant race. They
were almost everywhere engaged in desultory
hostilities with the Bushmen, who were doubtless
the aborigines of the country, and who were
usually treated by the Hottentots as the savage
inhabitants of a colony are too often treated by
the white colonist: they were to be exterminated,
or at least reduced to servitude. For the Hottentots
were an intrusive people. Their origin has
been the subject of considerable discussion. Their
traditions point back to a time when they dwelt in
a watered region somewhere in the centre of the
continent, from which they were driven by a
more powerful people, of a black colour, who came
down from the north or northeast (ibid. 33). An
examination of their language by philologists
has led to the discovery that it was a highly
organized tongue, akin to the ancient Egyptian and
other languages of the northern and north-eastern
part of the continent. It was inflected and
sex-determining. Its roots were monosyllabic, each
ending with a vowel, or the meaning of the word
frequently depended upon the tone. The Bushman
language was of a much more primitive type. It
was not sex-determining; it was hardly inflected at
all; and it abounded in the unorthodox sounds known
to philologists as 'clicks.' Of these sounds, how-
ever, four—and those the most easily pronounced
—were in use among the Hottentots; or five, if we
reckon the guttural peculiar to a few dialects of the
Hottentots and Bushmen. The discovery of these
linguistic facts threw an unexpected light on Hottentot
origins; and it is now generally accepted that
the Hottentots are of mixed descent, probably
due to the intermarriage of men of North African
—that is, Hamitic—lineage with women of Bush-
man race. This mixture may have begun in the
N.E. of the continent. The suggestion has been
made that the primitive ancestors of the Hottentots
were a band of Egyptian soldiers said by Herodotus
(lil. 30) to have deserted in the reign of Psam-
metichus, and to have taken service in Ethiopia,
where the king gave them a tract of land in the
occupation of his enemies, on condition that they
conquered and settled it. They would necessarily,
it is argued, have taken the women of the country,
if they had none of their own. The hypothesis is,
consequently, no more than a guess, and a guess which
may give rise to a number of difficulties; but to dismiss
it leaves the main theory untouched. The mixed
race, thus constituted, for some reason—possibly
the intermission of Bantu on their ancestral seats—
left those seats and fled to the south. As they
were a pastoral people with flocks of long-haired
sheep and hordes of cattle, they were compelled to
turn westwards, so far as to avoid the zone of the
taste-fly. Continually journeying, impelled by
causes which we do not know, but among which
the desire of time to reconquer their homes, for
which they were probably the least, they came at length
down the western side of the continent to the Cape. A
series of straggling tribes, they kept continually in
the zone of the best pasture between the sea and
the mountains or deserts of the far interior.
Finally they settled, since they could go no farther,
in a wide territory from Great Namaqualand to
the shores of the Southern Sea, from Walvis Bay
to the mouth of the Umtamvuna River, the present
boundary between Natal and Cape Colony. Their
immigration seems to have taken place at a period
not long before the discovery of the Cape, and to
have been contemporaneous with the advance of the
Bantu down the Eastern side of the continent.
It was this that stayed the progress of the Hottentots
to the shores of the Indian Ocean.

The Hottentots of Cape Colony have, for the
most part, been exterminated or driven northward
by wars with the colonists and servile oppression;
or they have suffered from the mingling of European
blood, have learned to speak a European language,
and adopted Christianity. Beyond the Orange
River the Korana people (who are emigrants from
Cape Colony) and the Namaqua have been somewhat
less industrious in preserving their racial purity,
such as it was, from white contamination. But
they have not been able to resist the disastrous
pressure of European culture any more than of
European races. They are a dwindling folk; and
—more rapidly than themselves—their language,
their traditions, and their ancient institutions are
disappearing. Their language was investigated
more than fifty years ago by Blessem (ibid. 59); their
traditions and their institutions have never been the
subject of any searching scientific inquiry on the
spot. Hence the attempt to produce an intelligible
outline of them is attended with some difficulty.

2. Characteristics, organization, and culture.—
This name and this country are described
probably it was a contemplative term bestowed by
the Boers. The Hottentots proudly called them-
selves Khoi-Khoi, 'Men of men.' They were, like
the Bushmen, a diminutive race, though by no
means tall as compared with Europeans. Their
wealth, as already intimated, consisted in flocks
and herds. Hence their settlements were never
permanently attached to one spot, and they were
separated from one another by the space necessary
for pasture. The huts were of hemispherical
shape; they were made of rush mats on a light
framework of wood, and were usually movable and
transported from place to place. Of agriculture
the Hottentots knew nothing, though they seem
to have taken kindly to it under European masters
(Theal, 172; Stow, 240; Kolben, 38; Fritsch, 280).

This nomadic mode of life was, of course,
compatible with only a very loose organization.
There were a number of independent tribes, the
chiefs of which were assisted, or sometimes controlled,
by the elders of the various families. Between
these tribes, and indeed between the smaller social
units of which the tribes were composed, there was
little cohesion; frequent, if desultory, feuds were
engaged in. Hence they easily fell a prey to the
colonists. Our information as to the internal rela-
tions of the kindred is very incomplete. Neither
the old travellers nor the modern writers on the
people have understood them. Their reports,
therefore, present contradictory features difficult
to reconcile. Their war is for hunting, and could be
for hardly influence. But the Hottentots have ever
been the people who have now passed for ever;
and any opinion about the family organization can
be expressed only with much hesitation. That the
rule was patriarchal and that inheritance was from
father to son, or, failing sons, to the nearest male
relative, to the exclusion of women, affords a pre-
sumption that the organization was by clans,
raking descent only in the male line. On the
HOTTENTOTS

other hand, in spite of polygamy, the women appear to have taken a high position. The wife was the ruler of the house, to such an extent that a man could not venture, without her permission to take from the vat so much as a mouthful of sour milk produced by the family cows. His nearest female relatives, we are told, punished a violation of this rule by beating the man himself; and if he should abuse the name, the sister would walk into his flock and take the finest cows and sheep; and no law could prevent her from doing so. Moreover, she might inflict punishment on him, though adult, for an infringement of the rules of courtesy and the code of etiquette. A woman might even become chief of the tribe, if of energetic character and the widow of a chief who left a son not yet of age. From these and other customs we infer that, if the organization was patriarchal, the opposite or matrilineal organization had left abundant traces on it (Hahn, Trans.-
geogra., 19-21).

When discovered, most of the Hottentots already possessed arms and tools. They had probably brought the knowledge of smelting from their original seats. Such weapons are not, however, valuable, and the Hottentots were a little timid in using them from the Stone Age. They were a brave and independent people, as filthy and irresponsible as savages usually are, but often provoking to anger, but kindly and hospitable.

3. Witchcraft and witch-doctors.—Like all peoples in the lower culture, the Hottentots were bound to the earth. To them the ghost was a certainty, and the grave a place, together with the apparel and implements of the deceased; otherwise removal would have been of no avail, for the ghost would follow them. They did not trust the medicine of their ancestors; nor does it appear that sacrifices were offered to ancestors as such. But it was the custom for a Hottentot, when in trouble, to go and pray at the graves of his ancestors (Hahn, 119); and, seeing that burials often took place in clefts and holes of the rocks, it is possible that the wild ceremonies described by the old writer were performed in caverns may have been invocations of the departed (Kolben, 56, quoting Vogel). Certain spots, moreover, were held sacred to famous men of the past. In going before the ghost, stop, to muffle the head in the mantle, and offer prayers to the dead man for protection of the worshipper and his cattle, and sometimes to dance round the place with singing and clapping of hands. The legends of many of these heroes were known and told. From an ancestor related by Kolben, however, it would appear that the spot often became sacred from a vague belief, arising it may be from purely accidental coincidences, that there was something uncanny about it, such as led the ancient Greeks to hallow the shrine of a hero unknown, or the Indians of British Guiana to ascribe to rocks and other inanimate objects a powerful spirit who must be honoured and mollified. There is no trace of a belief in future retribution. Rebirth, not always in human form, and shape-shifting, or transformation during sleep, appear in the stories; for the Hottentots were not different from other savage and barbarous peoples who recognized no impassable chasm between man-kind and the lower animals.

5. Food prohibitions. — The Hottentots abstained from eating fish that have no scales. The Bantu also abstain from fish, alleging as the reason their similarity to snakes—a form in which their dead frequently show themselves to the survivors. It
may be that some such reason caused the Hottentot to abstain; but this is a mere conjecture. Swine, fish, was likewise forbidden to them—on what ground we do not know. Another food prohibited, at all events to the Namaqua, was the flesh of the hare. The reason usually assigned for this was that it took, by the hare in the rage of the origin of death (cf. ERE, vol. iv. p. 415°, and vol. v. p. 706°), common in one form or other to all the South African peoples.

There is, however, another and a deeper reason for abstention from hare's flesh. The Namaqua share with the rest of the uncivilized world the belief that he who consumes the flesh of an animal absorbs that animal's qualities and becomes like it. To eat the flesh of the lion or to drink the blood of the leopard or the lion is to acquire the courage and strength of those beasts. In like manner to eat hare's flesh is to become as faith-hearted as a hare (Hahn, 106).

6. Moon and stars.—In connexion with the tale of the origin of death it may be observed that there is some ground for thinking that the moon was invoked by the Hottentots. At new moon and full moon they spent the night in dance, singing, and merrymaking. One old writer also speaks of their sitting at new moon on the banks of a river and throwing balls of clay into the water. It is by no means clear what was the exact meaning of these proceedings. It is possible that they were a rain-charm. The older writers may be roughly divided into two classes—those who denied that the Hottentots had any religion, and those who ascribed to them an idea of God as lofty as their own. Both these representations may safely be discounted. The ceremonies at new and full moon, which we are told, no inclemency of weather prevented, may be, as Kolben (p. 98) emphatically asserts, 'religious honours and invocations to the moon, that he who consumes the flesh of an inferior visible god, the subject and representative of the High and Invisible,' may be altogether beyond the mark. Since she was held to influence the weather, the rites were probably intended to induce or magically compel her aid. More than that cannot safely be said. Certain of the constellations also were known and named. At the first rising of the Pleiades after sunset a religious dance was held, with prayers to Tenni-goob for rain. Stars were said to be the eyes or souls of the dead, and the fate of a hero or a hero's name was connected with the position of a star or group of stars. The mummification of the dead into stars, not unlike that entertained by some of the Australian tribes.

7. Omens.—Many animals were observed for omens. If a hare crossed the hunter's path, he would return home; on the contrary, if it ran in the same direction as he was going, it was a good sign. The korsaan (ois kors) brought luck if it did not fly far from the hunter and soon again sat down. A certain kind of chameleon creeping on a hunter or his weapons or belongings, while he rested on the road, prognosticated success. This, rather than any worship directed to the insect, is the probable explanation of the rites so graphically described by Kolben and in general terms confirmed by Hahn as performed when the mantis appeared. It was, for some reason unknown to us, regarded as a favourable omen of the highest significance. If it went so far as to alight on man or woman, the fattest ox belonging to the kraal was killed. The lucky person received the entrails and wore the cant twisted about his neck until it rotted off, or until some other person was honoured by the mantis in a similar way. The flesh of the mantis was boiled, and the men or the women feasted on it according to the sex of the person on whom the mantis had alighted. The mantis, of course, was never killed or injured, for to do this would turn the omen into disaster and destruction (ibid., 98).

8. Mythology.—Hottentot mythology, so far as it has descended to us, is meagre. Setting aside stories relating to the lower animals (many of them, as we have seen, derived from the tales of the Namaqua), it is based chiefly on the adventures of two mythical beings, who were the subjects of tradition and the object of worship—Tenni-goob and Helitsi-ei-ei. The latter was a sort of culture-hero among the Namaqua and their neighbouring tribes. The traditions concerning him can only be summarized, for he is not so well known as Tenni-goob, the tale of a young girl who had chewed a kind of grass and swallowed the juice. The boy was as remarkable as his birth. He committed incest with his mother. He killed monsters. He fought and conquered great lions, and put wild beasts between the lion's seed and mankind. He cursed the lion and the vulture. To his commands are ascribed the habits of these creatures, as well as certain human observances. He died from eating the fruit of a raisin-tree, which is consequently prohibited; in fact, it causes dysentery and, if re-turned to life. He was an adept in shape-shifting. Another legend represents him as being born again as a young bull from a cow pregnant from eating grass. He has, moreover, a spirit that lives in the graves are found all over the country, usually in mountain passes. Natives who go by throw pieces of clothing or other articles of no value on them to keep them from mischievous spirits. He is held in awe and is believed to be powerful and indeed at times shrikes in all parts of the world. Sometimes more substantial offerings of honey or honey-beer are made. He is glad when men thus honour him. He still gives the Khoi-Khoi good advice, tells them how to keep the lion's children and other wild animals, and prevents danger from befalling them, if they entertain him. These stories present few traits not common to those of mythical heroes elsewhere.

The other personage is more important. He seems to have been known to all the Hottentots. His name, Tenni-goob, also written Teiti-goob, and in other ways, is usually translated 'sore (or wounded) knee.' The story told by an aged witchdoctor in explanation to Moffat was that Tenni-goob was a notable warrior of great physical strength, that in a desperate struggle with a giant, his brother, the giant received a wound in the knee, but having vanquished his enemy he abandoned his companion, who, having successfully defended his nation independent, for no one could conquer the Tenni-goob (wound knee) (ibid., Missionary Labour... in B. Africa, London, 1854, p. 136).

This derivation, however, is discredited by Hahn, who interprets it as the Red Dawn. His reasons are chiefly philological, elaborated under the influence of the mythological theorems current in the middle of last century. But he adduces two other considerations—that the Korana believe Tenni-goob to live in the Red Heaven or Red Sky, and that another mythological personage whom he equates with him, called 'The Man whose body has a brass-coloured backbone,' was addressed as 'Thou who paintest thyself with red ochre.' These reasons are obviously insufficient. Another account of the Korana belief makes Tenni-goob dwell beyond the blue sky, in a light sky. Red ochre is a substance commonly used by savages to paint themselves and the objects of their reverence; and it was so used by the Hottentots. Wishing for rain at the rising of the Pleiades, some of the tribes, when Hahn wrote, still addressed Teiti-goob in a traditional song as 'Father of the Fathers.' The question of his true character depends solely on the way in which we are to construe this phrase. A Korana tradition declares that he made two persons, a man, Laatme (Ovirieth Feather) and a woman, Hai na Mao (Yellow Copper). He gave them cows,
whose shift they should drink, a jerkal-fall to wipe the perspiration off the brow, a staff with a disc (kouv), a quiver with arrows, and a shield. From Temi-goab they expect all good things" (Hahn, 106).

Hahn, who found this statement among his notes, is uncertain of its source, but attributes it "very likely" to a missionary, Wurals. The last sentence, it is to be noted, seems a summary of what is the traditional character of many of the conclusions expressed (not without diffidence) above.

LITERATURE.—Notices and accounts more or less fragmentary are to be found scattered through the writings of the older travellers and missionaries. The fullest and most accurate information is given in P. Kolben, The Present State of the Cape of Good Hope, tr. Medley, 2 vols., London, 1723 (vol. I. alone relates to the Hottentots and has been alone cited above); and of more recent works in G. Fritsch, Die Binnensteere Süd-Afrikas, with an atlas of portraits, Breslau, 1878; W. H. F. Bock, Konger the Fox in South Africa, London, 1864 (a collection of Hottentot folk-tales chiefly from MS in Sir George Grey's library at Cape Town); T. Hahn, Temi-goab, The Supreme Being of the Khoi-Khoi, London, 1882; G. W. Stow, The Bushmen Races of South Africa, ed. Theal, London, 1900 (a painstaking but incomplete work, the author having died before half his task was finished); and G. McCall Theal, The Yellow and Dark-skinned Peoples of the Kamehame, London, 1910. E. SIDNEY HARTLAND.

HUGUENOTS.—French Protestantism was a native product of 1612-28. It had in the past, for the Albigenses (g.v.) had been exterminated, the Waldenses (g.v.) had emigrated, the university of Paris was the centre of Scholasticism, and the reforms of Gerson contemplated no breach with medieval theology. Except for the encouragement given by the sight of other successful revolts from Rome, it owed little to foreign influence. On the other hand, the system of doctrine thought out by Calvin, and the organization elaborated in Paris, had been adopted to some extent in every Protestant country except Scandinavia, and the French Protestant exiles have enriched not north Europe alone, but America and South Africa.

Jacques Le Févre was the Erasmus of the French reform, laying billets he feared to read out by 1612, following the example of Colast, he published a new annotated Latin version of Paul's Epistles, recognizing his doctrine of justification. In 1623 he began to revise the classical French version of the Vulgate. But the group of Humanists, protected at Meaux by the bishop, did little more than reform that diocese and leave it to the evangelical preaching. The political situation was dominated by the fact that Francis I. in 1516 made a Concordat with Rome, whereby he recognized the Papal rights of canonical institution and of exorcising anathem, and secured for himself all valuable ecclesiastical patronage. With the clergy thus rendered subservient, no motive remained for desire reform. The Council of Sess (1528-29) showed that the clergy were equally content, now that all French sees and abbeys were reserved for them. The nobility, however, feared that their rights and their material resources rapidly diminishing, and were accessible to new ideas. And in the Third Estate, craftsmen and artisans, suffering from the influx of precious metals, and they also provided a receptive soil.

The leader was John Calvin (1509-64), a Picard, trained in theology and law (see CALVINISM, vol. ii. p. 146 f.); but in 1534 he had to flee owing to his friend Nicolas Cop advocating evangelical views in his rectorial address at Paris. Finding that the movement was impeded by the ascetic and circular of the Abanabists and by some of their
the most, he published in 1536 the *Institutes of the Christian Religion* for casting the purified metal into the old moulds, but adding two sections dealing with the current slanders, and dedicating the work to Francis. The book was the first valuable dogmatic treatise, and soon was enlarged and translated widely. A revision of Laufrev's Bible version in 1536 by another Picard, Olivetan, and the appearance of Clément Marot's metrical version of the Psalms, were other treasured aids.

Some adherents were exasperated by the refusal of the clergy to reform, and their placarding of handbills attacking the old doctrines and usages that irritated the Catholics. Francis had wavered for a time, but, when he found one of these broadsheets on his bedroom door, he adopted a policy of extermination, announced in 1536, and seldom abandoned during the century. An organized congregation discovered at Meaux in 1546 was stamped out, but the movement spread. Henry II (1547–59) created a special committee of the Paris Parliament—the chief organ of justice—to systematize the proceedings. They proved ineffectual, and by 1553 a congregation was formed even in Paris, while four years later a synod of twelve congregations met and organized a National Evangelical Church. A confession was adopted, reflecting the influence of Calvin. His plan of governing each congregation by minister and elders was followed, and a system was begun of linking the congregations by synods of ministers and elders, much as the South German Anabaptists had arranged a generation earlier. As the movement extended, local synods grouped naturally by the civil provinces and the provincial synods were finally merged in one National Synod. The plan was rapidly adopted by Presbyterians everywhere.

The Synod of 1559 is a landmark, inaugurating a new day in the history of the Church. The repetition of the blood were saved by a forced conversion, but every other leader of note fell, with thousands of humble adherents. The survivors reflected their organization on quite representative lines, till there appeared a State within the State, independent of the feudal nobility and of the Crown. With the accession of Henry III (1574–89), two other parties defined themselves: the League of thronging Catholics, who copied the Huguenot organization, and the Political, who aimed at internal peace and the exclusion of foreign influence, as of the Guises and Catherine. The States-General of 1576, packed by the League, declared for unity; Henry, who had retracted his forced conversion, became heir-presumptive in 1584, the League was driven to a policy of exclusion. Four years later, the States-General declared against even toleration; but the arrogance of the Guises led to their assassination by order of the king, and, with the death of Catherine and the counterassassination of the king, Navarre succeeded as Henry IV (1589–1610).

The League was so strong that Henry found it politic to become a Catholic in 1589; he was able to banish the Jesuits next year, and in 1598 to grant the Edict of Nantes, destined to continue for 87 years, in great contrast to its many ephemeral predecessors. This declared Catholicism to be the established religion, maintaining the obligation of tithes and of the marriage laws; but it stopped persecution and recognized freedom of conscience, with the right of every subject to own religion. The "so-called reformed" public worship was legalized in every place where it was then actually practised—about 200 towns, with five chief cities excepted; also in many other places, and in two places within every bailiwick. All synods were authorized to meet. On the civil side, not only were full civil rights guaranteed, and for
HUGUENOTS

ministers such treatment as the clergy received, but committees of Parliament dealing with cases involving Protestants were to have Protestant members; and if no Protestant was available, about 200 towns were left in their military possession, the garrisons being paid by the State. Rapid development and "temperance" arose in numbers, with theological college at Nantes, Saint Denis, Die, Sedan, Montauban, etc., while domestic piety was nurtured by the Geneva revision in 1588 of Calvin's Bible.

With the assassination of Henry IV. and the accession of his son, Louis XIII. (1609-43), the tendency to absolute royal power increased, as was shown by no States-General being convoked after 1614. During the minority, the Jesuits quietly returned, and won many of the clergy to Ultra- montane views. The rise of Richelieu in 1624 frightened the Huguenots into revolt, and, when La Rochelle fell after four years, their separate political existence ended, and their fortifications were demolished everywhere. The Peace of Alais in 1629 inaugurated a third period, when they were merely tolerated as inferiors, without any guarantee that the Edict of Nantes would be observed. Nobles dropped off, as with the English Puritans after 1660, and the party became chiefly middle-class.

Richelieu and Mazarin, however, gave the Protestants fair play, so that in the troubled days of the Fronde they were loyal. Devoting themselves to manufacture and trade, and not being handicapped by the asceticism of their days, they gained nearly a monopoly of weaving wool, linen, and silk. Though they could hardly have muttered more than one million people out of fifteen at their peak, their importance was far greater. The Edict of Nantes was construed liberally, and public worship was actually maintained in 631 principal places, with 231 others subordinate. The synods met freely, though the National Synod needed special authorization, and a royal commissioneer presided. Thought ripened space under these conditions, and, while Britain the Church of God was hardening, the Huguenots preserved a more open mind. Dalilé's Traité de l'état des églises protestantes, written in 1632 and translated by 1651, did much to break down the authority of the Fathers and exalt the Bible. At Saumur also were sown the seeds which, transplanted to England, were to produce the Deists, though the later emigrants, such as Maude, Gailhard, de Lusancy, took the field against Secularists.

At this time the Huguenots were important enough even to influence foreign affairs. The Synod of Charenton in 1644 condemned the Independents as being against the Church of God, and the excommunication of Charles II., Amyrart and Bochart published books on the Divine Right of Kings, two others translated at The Hague and at Orange the États Basilié, while de Saumaise and Pierre du Moulin, rector of St. John in Chester, put forth royalist Latin pamphlets. William Dugard, Master of Merchant Taylors', translated de Saumaise into English and printed it on his own press. He was soon converted, rather forcibly, and not only did he publish Milton's response, but he became "Printer to the Crown". Also, in 1651, the Intendant of James's friend, accepted the chair of history at Oxford in 1648, and in 1680 published a work on the Conformity of the Discipline and Government of the Independents to that of the Ancient Primitive Christians. The libraries of Arundel, Sancroft, and Charles II. were in charge of Huguenots, and the court of this king even had an official Huguenot ambassador.

These halcyon days ended soon after the collapse of the English Commonwealth and Charles, about 200 towns were left in their military possession, the garrisons being paid by the State. Rapid development and 'temperance' arose in numbers, with theological college at Nantes, Saint Denis, Die, Sedan, Montauban, etc., while domestic piety was nurtured by the Geneva revision in 1588 of Calvin's Bible.

The ambassador in London sent word that 900,000
louis d’ors had been brought to the Mint for
conversion into English coins; the total loss in
merchandise was estimated at 35,000:000 livres.
Marshad Vanban indeed trebled this figure, but
was more in his element when saying that France had
lost 140,000 soldiers, and 300 officers. The towns of
coloniasts arose in Württemberg, where French
syndos met until 1892: Hambourg still maintains a
large French colony. The heads of the French
were kept up the speech and customs of its founders. But
the ravaging of the Palatinate hastened the steps of
most of the exiles on to the Mark or the Nether-
lands.

The Calvinists of Holland gave an abundant
welcome to their brethren. Collections were
organised and loans granted, with support for the
pastors; the craftsmen were allowed to practice
and even welcomed into the guilds; and taxes were
not levied for a term of years. Soon a synod of
200 exiled ministers met in Rotterdam, which
visitors declared to be well-nigh French. Richly
did the Huguenots repay their hosts. Some went
to the colonies; in 1664 other exiles occupied
Staten Island; and a New Rochelle arose on the
banks of the Hudson. Under another flag
all received naturalization in 1708. In Guiana,
Huguenots established Paramaribo; to the Cape went
15,000 Huguenots. The French language was
reintroduced in the Seychelles.

The migration to Brandenburg down the
Rhine left many settlers by the way. Geneva
lost 5000 inhabitants and the watch-trade as
some recovered. The falling off of
colonists arose in Württemberg, where French
syndos met until 1892: Hambourg still maintains a
large French colony. The heads of the French
were kept up the speech and customs of its founders. But

services were maintained at first; thirty new churches arose, especially in Spitalfields, where the silk industry soon increased threefold, and in the metropolis of Soho. Some of the pastors, however, threw themselves into English life; de l'Aigle from the great temple of Charlemont, pastor of the Huguenots; de Vail passed through it to the Baptists, Capell of Savannah taught in an Independent academy.

A club arose at the Rainbow Coffee House in Fleet Street, under the name of the Exekiarch. Here met Rapin Thoryas, Le Moivre, La Croze, Coste, friend and translator of Locke, and Bayle; such men as science and letters soon created a new public feeling which embittered the popular English mind against the France of Louis XIV. Bayle's Dictionnaire was translated in 1709 by Le Roche and others, and had no small share in the Deist movement; against that may be set Jurieu's Treatise of Devotion, and Drelincourt on Death. A new political doctrine, the Social Contract, was opposed to the Divine Right of Kings, by Jurieu and Abbade; and, though they may have inherited it from the English Commonwealth men, it was destined to be taken from the Club by Voltaire and Rousseau, and to work in France by the pen of Rousseau. Scores of less known pamphleteers were the mainstay of the Whig cause for a generation, when the London merchants addressed King George, 99 out of 542 names were Huguenot, showing how large a proportion of commerce had fallen to them. This devotion to the land of their adoption was old standing; as early as 1655 a society was formed to further true religion in England, and, fired by the new spirit of Methodism, the Christian Communion was made. The attempt was made to train new pastors in England, and the descendants of the immigrants learned not only to speak but to worship in English. Before 1780 most of the French services were discontinued; fifty years later there remained only four congregations in London, with others at Norwich, Canterbury, Southampton, Plymouth, and Bristol; to-day there are two chapels in Soho, one using the English liturgy in French. The absorption was quickened by a grant of general naturalization in 1774, and the gain in this department of national life is suggested by such names as Chamberlain, de la Rue, Dollond, Dumaresq, Gembler, Hambury, Labrothers, Layard, Marvinse, Portal, Pouey, Rapin, Romilly.

In Ireland the great family of Ruvigny earned a new title as Earls of Galway, and laid out a model town as Ffortarlington, whose school turned out such men as the Duke of Wellington; not till 1817 did its French service cease. Fontaine and others published all their works at Cork; and, though these were ruined by English legislation, Croommelin was more fortunate with the thousands and looms for linen and cambric wherever he found them in Ireland; the French church here lasted till 1798. Waterford received manufactures and a wine trade, while its abbey resounded with French eloquence till 1818.

Tillers of the soil passed on to America, some to Oxford in Massachusetts, thousands through New York to Pennsylvania, the home of liberty. The new and balmié Carolinas attracted most; French Huguenots were laid out with vines and olives, and began to weave silk and wool. For a while the settlers looked wistfully to Louisiane, but when the tax law was passed the privileges were freely tendered in the English colonies, strengthening not only the Carolinas, but Virginia and Maryland.

The Huguenots of the Dispersion thus carried with them to a Protestant land a wealth of probity, industry, gallantry, history, scholarship, science. Calvinism had too often become unlovely by transplantation; now it was invigorated and sweetened by this recent spring from the fighting stocks. But the France which thus impoverished itself paid dearly; it was hard to believe in priests who were denounced on persecution, as unchristian or phrasmatic. The typical ecclesiastical was no longer Pélisson, but Talleyrand. Through the insipid and pusillanimous 18th cent., the Huguenots of the home land not only existed, but proved the very salt of the earth.

For a generation after 1685 they had, indeed, been deprived of all public worship and of pastors. Those who ventured back or stealth were often kidnapped into secret prisons, and their sober work was ill replaced by the ministry of the Prophets. But, with the new situation created by failure in war, a new species of pastor arose to minister to the Church in the Desert, men able to inspire and to reorganize. Leading preachers were told off to conduct peripatetic schools, and synods began again whose minutes were recorded. Even in March 1715 the aged Grand Monarch had to admit that there were many Frenchmen who on their death-beds declined the rites of Holy Church; and the revival dated from that very year. The whole reign of Louis XV. (1715-74) certainly saw the persecuting laws maintained, and often executed, and in codifying them even added the touch that no marriage was valid outside the Established Church. But it proved as vain to fine people for absence from service as when Elizabeth tried it; and James VII.'s plan of levying on even village where the Covenanters met broke down as badly in France. Antoine Courtois began a seminary at Lausanne to supply trained pastors. Paul Rabaut proved himself a true Apostle of the Desert. Such huge gatherings came to hear him and other leaders that in 1748 the Assembly of the clergy pressed for a rigid persecution, which for seven years sent a large stream of emigrants abroad. By 1755 the Protestants of Saintonge even dared to build Houses of Prayer. A national Synod the same year showed that there were again 10 ecclesiastical provinces with 48 pastors; and seven years later another showed 14, with 28 pastors and 36 licentiates. By this time Catholic fervour had died down, and the soldiery did not like to enforce the laws. A crisis came after the execution of a pastor merely for preaching, marrying, and giving ordination; an atrocious miscarriage of justice caught Voltaire's attention, and in 1763 he issued a treatise on Toleration. With the accession of Louis XVI. in 1774, there came to power Turges, who even earlier had published on the same theme. When a circular letter was ordered to be sent to all bishops, he sent it also to all the Protestant pastors of the south, thus acknowledging their existence, their status, their weight. Protestant records of birth and baptism were admitted as evidence.

Lafayette returned from America with fresh ideas on freedom, and in 1787 induced the Assembly of Notables to petition for the removal of Protestant disabilities; despite clerical opposition, civil registration of marriage, birth, and death was made valid that year. With the gathering of the States-General in 1789, public worship was conducted with open doors in Paris. By March 1790 the National Assembly was presided over by a young pastor, Rabaut St. Etienne, and it decreed that all property in royal hands or more than a century and a half ago from Protestant emigrants should be restored to their heirs, who might return and take up citizenship.

During the Reign of Terror, the aged Rabaut was silenced, and his brilliant descendant was
gulicled—names shared by other pastors.—while all buildings for worship were closed. But, when Napoleon I. was marrying Marie Louise, in 1810, he grasped at the request of the Paris Protestants for a concurrent endeavor, and secured in return a control over their Church. The State dictated the constitution of the sessions of synods, the composition of the seminary, and even the number of pastors; a veto on all appointments was reserved also. It proved that there were about 430,000 Protestants in 171 churches, with 121 pastors. There was no property except the places of worship and the seminary, which was in 1809 transferred to Montauban and annexed to the university as a faculty of theology.

When the hand of Napoleon was removed, and the Catholic Church was over, the Church began to grow. First Scotch theology quickened native thinking, then German. Even under the Legitimists there arose a Bible Society, a Tract Society, a Foreign Mission Society, in 1835. Leave was withheld for a National Synod to assemble, but an informal meeting in 1846 resulted in a division. A minority seceded, repudiating freedom, adopted an evangelical confession, and arranged for biennial synods. The moderates clung to State pay, but drafted a scheme of reorganization on the historic lines which the State refused to sanction.

In 1872 a National Synod met, the first since 1860, and the division was perpetuated. The general question of 1835, which separated all Churches from the State and abolished all State pay, has given rise to a third section aiming at reconciliation. There are nearly 600,000 of the Reformers, according to the statistics adopted by 1000 pastors, with good organization and equipment. The influence on the national life is so important that it is only too easy to raise an outcry against the domination of the Protestants. International reputations have been won by Janet, Sabatier, and Schérer in theology, by Cuvier and de Quatrefages in science, by F. Guérard and Waddington in politics. The religious strength may be gauged by the honourable share taken in evangelizing the world. A mission to the Cape in 1829 extended to the East Indies four years later, and has met with much success, while the Zambesi was occupied in 1844; within French possessions, the Tahitian and Malay work was taken over from the London Missionary Society soon after annexation; in north Africa there are missions at Senegal and the Gabon, to the Kabyli, and on the French Congo.

HUICHOLS.—This tribe, numbering to-day about 4000 souls, lives in a mountainous country, difficult of access, in the N.W. part of the Mexican State of Jalisco, on a spur of the great Sierra Madre. They are the earliest neighbours of the Coras, or Nayaritas, to whom they are related by language, religion, and customs. Both tribes in the 18th cent. had been Christianized. The Coras still retain a priest and call themselves Christians, although their Christianity is to a large extent mixed up with pagan customs. But the Huichols, since the departure of the padres, have kept back into their ancient religious practice, and represent a very curious survival of ancient Mexican religious faith and idolatry.

The principal god of the Huichols is Tlapallan, 'our grandfather,' the fire-god. He is the god of life and health, and the particular god of the shamans, especially of those who heal and prophesy. He was the first who sat down on a chair, and is held to be more ancient even than the sun. Sometimes he is represented not by one, but by two images. One stands above ground and the other in a cavity beneath it. The latter is invariably the smaller and the elder of the two, and is regarded as closely associated with the sun after it has set, or the center of the world, while the upper image is supposed to be associated with the sun of the day-time, or of the upper world. There exists another form of the ancient fire-god, called Tlaloc, 'water god.' Several Huichol pictures are reproduced on the cover.

He is considered to be the spark produced by striking flint, and is the chief-deer god.
The sun is called by the Huichols Tavv's, or Tavv, 'our father,' or Tawvira, 'our eagle.' It is related that the ancient shamans made Father Sun by throwing the young son of the Corn Mother (or, according to others, the young son of young Mother Eagle, the goddess of the Sky) into an oven, arrayed in full attire, with sandals, pouches, and tobacco gourd, coiled in a circle. A hole was then bored in the oven the boy travelled underneath the ground, and rose as the sun in the East. The assistant of Father Sun is Tavv's Sakanonca, an image whom stands on the high mesa of the Nayarit, above the Cora pueblo of Sierra del Mayarit, where the Coras and Huichols deposit ceremonial arrows and other offerings in a cave. Tawv is considered to be the 'serpent-god,' represented by a zigzag line of blue colour, and was in former times 'the Sun's arrow.'

The great god of the Coras and Huichols is Tabátdí (Cora) or Tandáki (Huichol), 'our elder brother,' the god of the morning star. He is the messenger of the gods; and, when the shamans sing, he accompanies their music and offers his song to the other gods. He himself is called tonosmí, the 'singer,' by the Huichols. He is, at the same time, declared to be the god of wind and air. He is a vision of the god, who made the first arrows for the gods, the god of the hunter, and himself represented by a gigantic deer.

The growth of maize and other vegetables is ascribed to a goddess, called Takotsi Nákenok, 'our grandmother's growth.' She is the mother of the gods, especially of Grandfather Fire. All the earth belongs to her, and she lives in the under world. People implore her for long life, because she is very old. The goddess called Táte Tuirikéts, 'our mother, house of the little ones,' the goddess of conception and birth, and Táte Ite Oteganta, 'our mother the Cora,' the special goddess of maize and other vegetables, seem to be other forms of the same divinity.

Táte Naalimolni, the red serpent, the red cloud, is mainly a water- and rain-serpent who brings rain from the East. She is the creator of squashes and of all flowers, and takes special care of children. Her complementary deities are Táte Kyenimoko, a white serpent whose dwelling is in the West, and who brings rain from the West; Táte Yawrenda, a blue serpent, living in the Laguna de la Magdalena, four days' journey south of the Huichol country, who brings rain from the South; and Táte Bateks Keen, living on the lagoon to the north of the Huichol country, who brings rain from the North. Finally, the goddess of the heavens, the Corn Mother (or, according to some, the maiden eagle), is the mother of Father Sun; she holds the world in her talons, and guards everything from above, where she dwells. The stars are her dress. All these gods and goddesses are clearly recognizable counterparts of well-known Mexican divine types.

The cult of the Huichols consists in libations, in offerings of food and drink, and in preparing cakes of the ground seeds of Amaranthus leucocarpus, called scare by the Huichols (= Mex. sauchilt). Besides the cakes of this kind, they offer to their gods remarkable symbolic objects. They are embodiments of prayers, or charms intended to produce the object of the prayer, and are mainly found in the god-house and sacred gourd. Ceremonial arrows (ulu), sometimes in great numbers, are stuck into the inner side of the thatched roofs of the god-houses, or into the seats of ceremonial chairs, and the heads of arrows in the columns. The colours and shapes are attached to the arrows, and others hang from the roof, while on the altar may be seen wooden carved and painted wooden images of the animals dedicated to the god.

Another kind of symbolic object is called nezilika, 'face.' These are shields, round in shape, made by interweaving pieces of split bamboo with cotton cord, or various colored cattail, and mythological figures being represented in the weaving. They are mostly prepared for Tavv's, 'Father Sun,' and Táte Naalimolni, 'Mother East-water.' The central part, a hole defined by a ring, represents the hole through which the god sees. Compare the ancient Mexican ceremonial object, called nácholom, 'instrument of seeing,' the special outfit of the Mexican god of fire and of Tezcatilipoca. The objects called namá, 'mat,' of rectangular shape, seem to be representative of a cloth hanging over the back of the gods.

Curious ceremonial objects are those called niki, 'eye'—crosses of split bamboo, interwoven with crewel or yarn, and resembling in the most striking way objects that are met with in Peruvian graves. These objects are tied to the twine of bark fibre and offered to the gods. They are called koka, 'bead,' 'necklace,' as they are looked upon as the necklaces of the gods to whom they are dedicated. In October the feast of green squashes is held, called wuind kúndri, 'to beat the drum,' the squashes representing the gourd-rattle (kúndri)—the rattling noise which the dry seeds make inside the squash when shaken. The children are brought to the god-house, wearing on the head a niki, or 'eye' (which in this ceremony seems to represent the squash-flowers), and carrying rattles in their hands. For this feast is held in honour of Táte Naalimolni, the creator of squashes and all flowers, the special patroness of children. It is a great prayer for growth, health, luck, and plenty to eat.

All priests and shamans use tobacco, which the Huichols, like the ancient Mexicans, regard about with them in a gourd hanging over the back. This tobacco-gourd being the essential and most necessary outfit of priests of every class. Besides tobacco, there is another intoxicating plant which plays a very important part in the life of the modern Huichols and other living tribes of the Mexicans, as it did, according to the chroniclers, with the Chichimeca, the nomadic tribes of the northern part of Mexico in ancient pre-Hispanic times. This plant, called in the Mexican language pepoll (by the Huichols, huachumaras), and other tribes of the Sierra, níchitl, is a small species of cactus (= Anakalium Leavini, Hinnings), which grows abundantly in the central mesa, especially in a country which the Huichols call Pálîataz, far from the mining town Real Catorce, in the State of San Luis Potosi. It is thought to be necessary to procure it every year, to ensure the country against drought; and there are large October parties of from two to twelve start on a pilgrimage to Pálîataz; the journey, which is accompanied by various coloured crests and characters, much fasting and praying, required 45 days. The leader of the party and the second in order
HUMANISM. — "Humanism" in philosophy is opposed to Naturalism and Absolutism (qq.v.); it designates the philosophic attitude which regards the interpretation of human experience as the primary concern of all philosophising, and asserts the adequacy of human knowledge for this purpose. Epicyclic man into the centre of the intellectual universe and giving to all science and literature a reference to human life and its purposes, philosophic connects itself with literary Humanism (see following article). The literary Humanism of the Renaissance, which was essentially an attempt to emancipate thought and education from what it considered the narrow scholastic routine of the Middle Ages. This revivified and modernised the "human letters" (i.e. of classical, and more particularly Greek, literature), the texts of which are included in philosophic Humanism as one of its manifestations. The intellectual movement of the 5th cent. B.C. in Greece, which was initiated by the Sophists and continued by Socrates, is also to be cited as such an era of human revolt against the domination of pedantic, abstract, and sterile speculations in the case the systems of the metaphysical physiologers. In fact, modern Humanism is so largely and awesomely a conscious revival of the critical relativism of Protagoras and appeals so explicitly to his maxim that "man is the measure of all things" that it may without injustice be described as Neo-Protagoreanism. But, though Humanism is confessedly a relativism, and as such is a denial of the certainties of the world and the true, and is opposed to every form of Absolutism (whether in metaphysics or in epistemology) which ignores or destroys their relation to man, it denies on behalf both of itself and of its forerunners that its relativism is to be identified with scepticism. It holds, on the contrary, that the truth and reality for man with all men are also sufficient for man, and that scepticism is the inevitable outcome of Absolutism so soon as it is perceived that "absolute" truth and reality can only be so defined as to be (in fact) unattainable by man. Founding itself on the assumption of the inadequacy of human knowledge to human needs and in contenting itself with, in being critical, rather than dogmatistically disdaining, of metaphysics and, about all, in admitting every hypothesis as worth trying which has a human interest and appeals to any side of human nature. It is this open-mindedness that may bring it into conflict with Naturalism, as it may reconcile it even with Absolutism, in so far as the latter can be exhibited as really containing an answer to genuine human needs, and, above all, it is in dispute whether any "absolutist" doctrine of knowledge, truth, and reality can really establish any relation between its ideals and the human uses of these terms.

To Pragmatism (q.v.), Humanism is closely related. But Pragmatism, though it sends its roots down into a number of sciences, is intrinsically a theory of knowledge, while Humanism is a more general philosophic attitude. William James calls it "a ferment that has come to stay," and a "shifting in the philosophic perspective, manifest... appear as from a new centre of interest" (Meaning of Truth, p. 121). It may be regarded as a natural and logical development of the Pragmatic method of testing knowledge by its human value, and as a process of knowledge undermines the "independence" of the sciences and humanises them; their claim to absoluteness cannot survive the discovery of their man-made character and of the artificial and methodological nature of their principles, even when they seem most abstract and unhuman. Humanism, therefore, like Pragmatism, primarily the name for a method, and not for a system of philosophy; it is more particularly a protest against the dehumanising of logic which results from assuming a standard and absolute "truth," and purpose of judgments may be abstracted from in considering their cognitive purport. The humanist attitude implies also a critical method of estimating the value of the claims to truth put forward by the various systems of metaphysics. This necessarily renders it very destructive to what is called "metaphysics." For metaphysical systems have usually been put forward dogmatically, with claims resting on self-evident "intuitions" or an alleged completeness, and with pretensions to absolute and exclusive truth. To their humanist critic, however, no claims are valid merely as such; all must be validated by the value of the world and the true, and is opposed to every form of Absolute (whether in metaphysics or in epistemology) which ignores or destroys their relation to man, it denies on behalf both of itself and of its forerunners that its relativism is to be identified with scepticism. It holds, on the contrary, that the truth and reality for man with all men are also sufficient for man, and that scepticism is the inevitable outcome of Absolutism so soon as it is perceived that "absolute" truth and reality can only be so defined as to be (in fact) unattainable by man. Founding itself on the assumption of the inadequacy of human knowledge to human needs and in contenting itself with, in being critical, rather than dogmatistically disdaining, of metaphysics and, about all, in admitting every hypothesis as worth trying which has a human interest and appeals to any side of human nature. It is this open-mindedness that may bring it into conflict with Naturalism, as it may reconcile it even with Absolutism, in so far as the latter can be exhibited as really containing an answer to genuine human needs, and, above all, it is in dispute whether any "absolutist" doctrine of knowledge, truth, and reality can really establish any relation between its ideals and the human uses of these terms.
so to some extent different in each case. It follows that it is not so much the right to construct metaphysics that is called in question as the claim to infallibility of man. Thus Humanism makes for toleration and abolishes the right to personal inspiration, though it might apparently be held in an absolute and immutable truth which is the same for all, but substitutes for this the notion of a common truth which rests upon social agreement and is being continuously elaborated and improved in the growth of human knowledge. The general effect of this, again, is to diminish the philosophical importance of dialectical syllogisms which appear only to a few, and of merely intellectual reasoning as such, and to enhance that of the common-sense notions which have long ago been evolved by man for the guidance of his actions.

**Literature.**—Historically the philosophical usage of the word 'Humanism' is of very recent origin. It seems first to have been incidentally as a tentative descriptive term, equated to 'anthropocentric' and opposed to 'naturalistic' in A. Seth Friggas-Frisell's *Men's Place in the Cosmos*, London, 1907, p. 21; also in *Nord. Rev. For. Art.* (1908) 445, used by W. Child, of the University of Uppsala; and cf. *Athenaeum* (1908) 445. The present writer first propounded (in 1905) to appropriate it technically for the material and formal forms of the Renaissance. He had been led to William of Ockham and himself and expressed in James's *Will to Believe* New York and London, 1899, ed. Byrnes. In 1889, in his *Humanities* (London, 1905); cf. his *Studies in Humanism* (1899). This usage is especially to be found in James's *Will to Believe* (in *Human Sciences*, 1899, pp. 243-250), and in *Misc. Essays* (1907). *Literature and the Mediaeval* (1909). Cf. *Humanismus*, *Bibliotheca* (1909), *Recusant* (1907), *Recusant* (1907), *Recusant* (1907), vol. 1, pp. 71-7. The word has been used, in a too vague sense, merely congratulating interest in men, by J. R. MacKenzie in his *Humanismus*, *Bibliotheca* (1909), *Recusant* (1907), vol. 1, pp. 71-7. It is also used, in religious contexts, by ascetics as the opposite of 'supernaturalism.'

F. C. S. SCHILLER.

**HUMANISTS.**—I. **GENERAL.**—The transition from the medieval to the modern world seems one of the most abrupt in the pages of history. Certainly it did not take place even in the same century in the different lands—the harvest in Italy was over before the seed was sown in Scotland,—nor did the various fields of human life quicken to the new impulse with a simultaneous response, but the emergence of the new order followed hard on the thrill of expectation. The whole complex movement which wrought the transformation in the outlook of men we call the Renaissance (p. e.).

Humanism is the best term for the movement: in the Humanists we find its conscious pioneers and promoters.

The name 'Humanism' itself indicates the nature of the movement. Just as in the Scottish Universities the term 'Humanity' is still used as a designation for the Latin language and literature, and as in wider circles classical studies in general are summed up by 'humanism,' so the Humanism is the student of human letters, the languages and the literatures of Greece and Rome. The work of the Humanists was to disinter the buried classics, to restore a lost means of culture, to re-capture an ancient charm of style, and a broader humanity of spirit.

But the change was not so sudden as it seemed. There were signs of the approaching dissolution of Medievalism before the Renaissance proper began. From the 13th cent. there were traces of the dawn. A. Bartoli ( *Proceri del rinascimento*, Florence, 1877, p. 19) found traces of the reaction from terrorism which took place when the year 1000 passed and the world undestroyed. But both the preceding darkness and the succeeding light have to be seen in their historical place. There was also a partial revival of learning in the 13th cent., due in great measure to the extension of the University of Paris, but all trace had been lost; but, since Aristotle as understood or misunderstood was one of the great legacies of the Middle Ages, it is vain to seek any real connection. The 15th cent., however, certainly marks the close of the Renaissance, and then we may call, with but little over-estimation of their significance,
HUMANISTS

Francesco Petrarca (1304–74) has been rightly acclaimed as the first of the Humanists. His great predecessor, Dante (1265–1321), is a citizen of two worlds, medieval and modern; Petrarca is the first true modern. It is noteworthy that the decisive change in their attitude is typified in the balsamic imitation of whom the Humanism of Italy, almost two centuries later, first showed the fatal symptoms of decay. He loved Cicero from his school-days and read him eagerly, not with a view to advancement in his profession of the law, but because of his delight in his majestic swing and balanced periods. It was the style that fascinated him from the beginning. Another impulse came from the sight of Rome (1336) deserted by the Popes, yet full of monuments eloquent of past grandeur. Cicero and the other ancient thinkers were to him the gateway into the understanding of this ruined splendour. So, despite many an early discouragement, he pursued his studies in the literature of Rome. In his correspondence and in most of his writings he used a Latin moulded on the Classics. He was prudent of his Africano and de Vitis Illustribris than of the Italian Boccaccio or Camões, on whom his fame now rests. To seek out MSS, particularly of Cicero, was perhaps his most absorbing pursuit. His letters are full of the loss, the desolation of the foreign lands. He never failed to urge young friends to acquire it. Along these lines lay the activity of the first of the Humanists, and, as J. A. Symonds says (Renaissance in Italy), when on ‘The Revival of Learning,’ new ed., London, 1892, p. 54)...

In this susceptibility to the melodies of rhetorical prose, in this special cult of Cicero, in the passion for collecting manuscripts, and in the intuition that the future of scholarship depended upon the resurrection of Greek studies, Petrarca initiated the four most important movements of the classical Renaissance.

Petrarch’s devotion to the Classics led to no breach with the Church. His criticism was not of its abuses, though belonging himself to its priesthood, and conspicuously avoiding all ecclesiastical duties. His learning did not tend to Paganism; the ancient culture was to him a handmaid to Christianity. Of the law and philosophy of his day, however, he spoke with open scorn. It was more empty sophistry, unfathomable mental gyrations. In these things, and in other less admirable respects—in his irritability under criticism, his prodigious appetite for flattery, his overweening desire for personal fame, and his invertebrate habit of posing—he foreshadowed the activities and failings of his successors. His labours served to inspire others with similar zeal and to find the atmosphere necessary for their development.

Giovanni Boccaccio (1313–75), a younger contemporary of Petrarca, was his most distinguished disciple. If Petrarca has the honour of being the first of the Humanists, to Boccaccio belongs that of being the first to acquire anything like a working knowledge of Greek. His teacher was the pretentious Leonzio Pilato, and the knowledge he acquired was not very profound, but still it was a beginning. Devoted to Petrarca, he followed his guidance, collected MSS, and a genuine reverence for every ancient writing, however unworthy. His main departure from the ideas of his contemporary and master was in his bitter hatred of the monks, as the opponents of learning, and hypocritical pretenders to sanctity. With Boccaccio, Florence becomes the headquarters of the Humanists. The brightest star in its spirit, antiquarian in Marsilio Ficino, and its interests, but sporadic in its manifestations, prepared the way for Petrarca.
time; and Coluccio Salutati (1380–1406), the Chancellor of State, whose official letters were copied at the expense of the city. Girolamo Buglione, a pupil of Galileo, was one of the most distinguished pupils, Leonato Bruni (1390–1444), no one in all Italy has beenmaster of Greek letters. "Chrysolora of Byzantium... brought to us Greek scholars. Among his stars were the teachers in Italy were George of Treviso, who taught in Venice and Rome as well as in Florence; Theodoric Cani, teacher in Ferrara (1411–50) and afterwards in Rome, whose Greek grammar, fuller and more scientific than that of Chrysolora, was used in his classes in England; John Argyropulos, in Florence (1466–71), afterwards in Rome, the teacher of Lorenzo de' Medici, Politian, and Roscellini; Demetrio Chalcondyles of Rome and Pisa; and John Lacon who, by his residence in Paris, left his mark on the Humanism of France. Greek learning was therefore not brought to Italy by scholars finding with their precious 8000 from Constantinople at the fall of the Eastern Empire; it was during the first century which preceded its fall that, on the earnest request of the Italian themsel- 

Europe. And it was his Heptapla, with its masterpiece seal for the Kabbala, that started Boccaccio on the study of Hebrew. The Florentine Academy was only one of many institutions of the kind. Of the others, the most significant were those of Rome, founded by Julius Pomponianus in 1472 and then about 1460, anticipatory in its interests, openly pagan in its tone; Naples, founded by Jerome Pomponianus and the remaining members of the Humanist protégé of Alfonso the Magnanimous, devoting itself to the cultivation of the arts; and Venice, the latest of all, which centered in the Aldine Press and the foundry, Aldus Manutius (1450–1515). The great manuscripts were conducted in Greece, and the most important ones were the choirs of books to be published and the accuracy of their texts.

The great patrons of learning ought not to be passed over without remark. Mention has already been made of Cosimo de' Medici; but his grandson, Lorenzo the Magnificent (1449–92), was the person of an even more brilliant circle, both in Florence again, Giovanni, as Pope Leo X. (from 1513 to 1521), conferred high ecclesiastical office on very unscrupulous Humanists. He was not the only Roman Pontiff, however, who took a deprecating view. Nicholas V. (elected 1447) was the first of them. A Humanist himself of the earlier type, he gathered round him a notable band of scholars. Under his Rome became a 'workshop of education.' Pius II. (1458–64), who as Pope had gained no mean reputation as a Humanist, vigorously dis- appointed his预约 friends. Artists, not scholars, won his patronage.

During the whole of the 16th century, the work of collection was zealously pursued by men like Pierre Nicole Nicereth (1510–1589), who, as secretary of the Musaeum to Florence, and Vespasiano da Bisticci (1421–88), multiplier of MSS, bookdealer, and biographer of his patrons; libraries had been formed; and in the latter half of the century, the Humanism of Italy reached its highest level in Angelo Ambrogini (Politian) (1464–94). Professor of Greek and Latin in Florence, he wrote poetry in three languages, showing an extraordinary facility in Latin verse. His aim was independence, not imitation, and in his bands Latin had all the flexibility of a living language. His influence was extensive and profound. Somewhat before his time, and somewhat beneath his level of attain- ment, but with the same spirit and ambitions was Francesco Filo (1386–1461). These two were the leading Humanist Professors in the high noon of Humanism.

A marked feature of the Humanist movement in Italy was the number and fecundity of its literary duels. The most brilliant of these duellists was Poggio Bracciolini (1360–1427), the explorer of neglected libraries. His controversies with Filo over the standing of Florence, with Guarino da Verona (1570–1459) upon the comparative merit of Sulpicius and Julius Caesar, and with Lorenzo Valla (1505–77), occasioned by some marginal annotations of one of Valla's pupils, and developing into an onslaught on each other's Latin, were conducted with an unparalleled scrupulousness, acuteness, and courtesy. Valla was a man of vast erudition, though decidedly more temperate, disfigured by the same kind of venomous invective. Some of Valla's other work was epoch-making, though the later part of his life from an extent of learning. His exposure of the 'Donation of Constantine,' and in his Politian's work of Letters, in which he and his friends identified the discrepancies between the Vulgate and the Greek first came to the light, helped materially the cause of the old version.

By the end of the 16th century, the Humanism of Italy had entered on its final stage. In Pietro Bembo (1470–1547) we see the old enthusiasm for letters, but, dominating everything, a conscious aping of the elegancies of Ciceroan diction. With the sack of Rome in 1527 and the compact between Emperor and Pope in 1530, the Italian revival of learning comes to an end. The age of Spanish tyranny succeeds, and the glowing fire burns low. By the middle of the 18th century, Greek was disappearing. Even to the erudite Caesar Baronius (1539–1607) it was an alien tongue. But the flame which had been thus quenched and nourished in Italy had already spread to other lands.

2. France.—Though there are early signs of the passage of the New Learning into France, it was long kept in the background through the prestige of the University of Paris and the School of the University of Paris and the School of Montpellier. The university of Montpellier, founded by Pope Pius V. (1554–1418), disciple of Petrarch and correspondent of Salutati, probably deserves the

VOL. VI.—53
HUMANISTS

Alexander Hegius (1433–99), had Erasmus as a pupil, went to Rome in 1477, and entered into the service of Roger von Poblenz (1470–72) in Italy. It had its forerunners in men like Gregor von Heimbach (1410–72), who was half-fascinated and half repelled by the Italian Humanists. Through the German humanists the German universities, which had hitherto been the national Wanderlust across the Alps, through the great Councils, where the Humanist secretaries, all Italian by profession, impressed their German brethren, and through the frequent commercial intercourse, the revival spread. Corresponding to the Academies of Italy were informal associations in the towns and cities. In Erasmus's account of his German journeys there is frequent reference to reception and escort by the sodalitates or confraternities — the local group of scholars united in the comradeship of learning. The Humanist Universities were naturally centres of such fraternities. The circle in Erfurt was called 'the Mutianus host,' from Mutianus Rufus (1471–1538), one of the many who had come under the spell of Pico. The centre of the Heidelberg group was Rudolf Agricola (1435–85), 'the first,' Erasmus describes him 'as a man of the highest culture.' At Ingolstadt, Johann Eck (1446–1543), who became the opponent of Luther, and Urbanus Rhegius (1489–1541), who became a man of the highest culture. At Basel, Girolamo (1488–1563) ruled, save during the residence of Erasmus.

But in the centre of the Universities, the Humanists had their groups in the great cities. At Nuremberg they gathered round Wilhelm Pirkheimer (1470–1528), who combined in his own person the versatility of the Italian Renaissance and the more earnest spirit of his own land; at Augsburg round Conrad Peutinger (1465–1547), keeper of the city archives, diplomatist, and antiquary; at Strasbourg, round Jacob Wimpfeling (1450–1558), 'the schoolmaster of Germany,' and Sebastian Brant (1450–1521), satirist and author of the Narrenschiff.

Three names stand out from all the others in importance and significance. Johann Reuchlin (1450–1522), with attainments in Greek which gave cause for astonishment to Argyropoulos, was the effective promoter of Hebrew studies. Though Conrad Pelachius (1475–1556) had in 1504 published a creditable Hebrew Grammar, it was Reuchlin's Semina Hebraicae that became the foundation of Hebrew scholarship. Attacked as a traitor to the Church for opposing Ficino's proposition of a literal holocaust of Hebrew books, he was at first acquitted (1514 and 1516) and then condemned on appeal (1520). It was the stand which he made that united the forces of German Humanism. Ulrich von Hutten (1488–1528), the son of an impoverished Franconian noble, was designed for the Church, and sent at the age of 11 to the Monastery of Fulda. Finding there the study of the Reformation, he found time and opportunity to foster education and to furnish it himself with indispensable aids to classical study.

Placed by the founder of the school of the 'Brethren of the Common Life' (q.v.) Schools like Schleswig, where Reuchlin began his education, and Davenport, whose most famous master,
refused to join the Reformers when the actual breach came, it was their work that had prepared the way for it, and their pupils gathered round Luther and Zwingli. The main stream of German Humanism in the beginning been flowing steadily towards Reformation in some shape or form.

2. The New Learning. - Through his kinship of spirit with Petrarch, Chaucer (1340?-1400) has been hailed as the morning star of the Renaissance. But his kinship is not with the distinctively Humanist side of Petrarch's activity. Humphry, Duke of Gloucester (1381-1447), patron of scholars, collector, and correspondent of Italian Humanists, did much to hasten the new era. But it is with two friends, Thomas Linacre (1460?-1524) and William Grocyn (1440?-1519), who had studied in Italy under Politian, and on their return taught Greek in Oxford, that Humanism began really to establish itself in England. John Colet (1467?-1519) gave the movement its strongest impulse and its direction. He returned from Italy, well equipped in scholarship, and with a thorough contempt both for the whole scholastic dialectic and for the Neo-pagan Humanism. In his lectures in Oxford on St. Paul's Epistles he broke fresh ground. He was the first to apply the critical methods of the New Learning to discover the exact meaning of the books of the Holy Scriptures (T. M. Lindsay, A Briefe Discourse concerning Bishop Richey's Expostulation, 1653-55, i. 160). In 1510, Colet, now Dean of St. Paul's, devoted his patrony to the founding of St. Paul's school, where 'children should be taught good literature, both Latin and Greek,' Its first master, William Lilly (1460?-1529), gave his name to the Latin grammar prepared for the school, and subsequently widely used. In reality it was a compositor's grammar, but it was revised by Erasmus, Lilly, and others. Colet's friend, Sir Thomas More (1478-1535), was a hero-worshipper of Pico della Mirandola, whose life, which he translated, showed him the possibility of combining the new culture with a fervent yet undisturbed Christianitv. In his Utopia (1516) he gave evidence of his opencnowledged debt to all the better influences, not only of Humanism but of the whole Renaissance movement. Among other names worthy of mention are Sir Thomas Smith (1512-77) and Sir John Cheke (1514-67), through whom Greek studies were established in Cambridge; Roger Ascham (1515-68), Greek throughout, and the famous Richard Tylney (1484?-1536), who, from the preparatory school of Erasmus, passed into that of Luther.

The Humanism of England produced no prodigies of erudition, but it did produce great popularisers —translators of the Classics whose translations themselves became classics. North's Plutarch and Chapman's Homer are conspicuous examples. Through such translations, Humanism profoundly influenced and helped Elizabethan literature. And it must ever be remembered that in its springtime the Humanism of England had its own definite ideals to which Erasmus owed more than a little. These ideals find fit expression in the statutes of Colet's school: 'My intent is by this school specially to increase knowledge, and worshipping of God and Our Lord Jesus Christ, and good Christian life and manners' (F. Sebohn, The Oxford Reformers, London, 1884, p. 209 f.).

5. The other countries. - The New Learning passed across the channel by scholars who had been to Italy. Of these the foremost, though not the first, was Reginald Scot (1448?-1599). He spent ten years in Italy, taught in the Universities of Seville, Salamanca, and Alcala. The University of Alcalá was the headquarters of Spanish Humanism; Cardinal Ximenes (1436-1517) was its Maecenas, the Compendiose Polignol (1582) its outstanding product. The revival, short but brilliant, came to an end, like that of Italy, through the compact between Charles V. and Clement VII. in 1530.

To Scotland the New Learning came late. Passing over earlier students who came under its spell abroad, men like Patrick Hamilton (1504?-1529), who belong rather to the Reformers, the one outstanding name is that of George Buchanan (1500-92). Trained in France and a teacher there, he was one of the leaders in the ill-fated attempt to plant the New Learning in Portugal. His Latin paraphrases of the Psalms and his other Latin poetry had a tremendous vogue. Joseph Justus Scaliger declared that Latin literature had reached its climax in Buchanan's verse. To Andrew Melville (1546-1622) belongs the credit of re-organising Scottish University education on Humanist lines.

We have left to the last the greatest of the Humanists, Desiderius Erasmus. Born in Rotterdam in 1466 or 1467, he belongs by birth to 'the other countries.' In spirit he was a true cosmopolitan. He is to be found, first in France, then in England, France again, Italy, England again, and finally at Basel. And this list does not include the shorter visits of this born wanderer. He was the friend and correspondent of the contemporary leaders of Humanism in all the countries. He became almost a dictator of Learning in north of the Alps, without ever assuming the manner of the despot. In the field of classical studies his Adagia, de Copia Verborum, and Apo-stithemanemata were much-prized aids to study. The second went through sixty editions in his lifetime. In Greek he was perhaps second to Budens, but in Latin he had no real rival. Jealous Italians might call him 'Porvus Coel' (in his fondness for the word porvo), but, as his Cicero-nanus showed, his ideals were not theirs, and his Latin, if not so imitative of Cicero, was a much more flexible and powerful instrument. Works like the Encomium Moriae and the Colloquia showed the world the necessity of reform. His aim throughout was a Christian Renaissance, the source of which was not to be found in Plato, but in a return to the New Testament and the older Fathers of the Church. His Greek Testament of 1616, his numerous editions of the Fathers, and indeed the great bulk of his very numerous works were designed to help in such a Christian Renaissance. In the midst of his labours the Reformation came. He died at Basel in 1536, committed to neither party, but amid an admiring circle of friends who were all on the Reformed side.

Though his attempted neutrality in the decisive struggle and certain obvious faults in his character have caused him to be looked upon as a petty-minded man, he did more than any other to extend the influence of Humanism, and that of the very highest type, thereby earning fairly the name of the greatest of the Humanists. Half-hearted Reformer he may have been, but he was neither half-hearted Humanist nor half-hearted Christian.

III. RESULTS. - In dealing with the general results of the Humanist movement thus sketched, the difficulty is to disentangle it from the Renaissance of the whole. We are apt to ascribe to it influences which, strictly speaking, do not belong to it at all. The defects of the movement are evident—(1) in its tendency to exalt erudition above true intellectual development, and to degenerate into mere pedantry; (2) in its open recantation of the sincerity induced by a too exclusive devotion to style. Panegyric and abuse in some quarters became fine arts. The sale of encomiases by the Humanists was vastly compared to the sale of indulgences by the Church.
On the other hand, there were many distinct gains. (1) The buried Classics were disinterred and preserved; they were diffused by the printing-press; they were made available by Grammar and Lexicon. (2) Education was set free from narrow Scholastic limits and clerical monopoly. Culture was for the citizen as well as for the 'cleric.' (For men and methods, see EDUCATION, vol. v. p. 1799.) (3) The contact thus established with the great minds of antiquity led to the general revival of thought. The reaction from the fragmentary Aristotelian and his medieval commentators led at first to uncritical enthusiasm for even the wildest vagaries that could be called Platonic or even Neo-Platonic, but later, through controversy and study, to a reasoned understanding of both, thus preparing the way for modern philosophy. (4) Art and literature received a fresh impulse through the abundance of new material of which it did not fail to make extensive use. (5) Acquaintance with the literatures of Greece and Rome led to a rapid evolution of literary forms in the national languages. Most of the modern novels are founded on the uncouthness of their vernaculars. Petrarch's preference for his Latin writings, his regret that Dante had not written in Latin, and Boccaccio's confession that he did not think the German language a fit instrument of literature till he had seen Luther's use of it, are outstanding examples. The futile experiments which almost every nation tried in literature witnessed of torturing the vernacular into classical moulds had yet their result in a new variety of form, and a new vigor in language. (6) The critical methods of the Humanists swept away such obscurantisms as the four-fold sense, and, applied by Northern scholars to the Fathers and the Scriptures, gave a great impetus to the Reformation. The broad result is summed up by Jebb: 'The historical importance of the Classical Revival in Italy depended ultimately on the fact that it broadened out into this diffusion of a general capacity for liberal culture, taking various forms, and leading to the Reformation and the whole literary and political activity, once restored to the civilised world, became a part of the higher life of the race, an energy which, though it might be temporarily retarded here and there by reactionary forces, could not again be lost. Not in literature or in art alone, but in the whole social and intellectual activity, the Renaissance opened a new era for mankind' (Cambridge Modern History, i. 564).

HUMANITARIANISM.—Humanitarianism is the ethical sense—wholly distinct from the theoretical—is the deliberate and systematic study of human principles; the attempt to show that humaneness is an integral part, if not the actual basis, of morals. In estimating the value of compassion as a moral force, it is not necessary to discuss the different theories as to its origin, age, conditio, or the higher teaching—in the doctrines of Buddha, in

HUMANITARIANISM.
HUMANITARIANISM

the system of Pythagoras, in the practice of the
Essenes, in the pagan philosophy of Plutarch and
Porphyry, and with less consistency, perhaps, so
far as our data now go as the lower animals are
concerned, in the Christian Scriptures. For, though
the gospel of 'peace and goodwill' led its early fol-
lowers to believe in the sacredness of all human
life and the natural equality of men, and that belief
led in its turn to the abolition or curtailment of
many cruel practices, such as the gladiatorial shows,
there is also truth in the statement (A. Jameson,
Commonplace Book of Thoughts, Memories, and
Fancies, London, 1854, p. 206) that 'the primitive
Christians, by laying so much stress upon a future
life in contradistinction to this life, and placing the
lower creatures out of the pale of hope, placed them
at the same time out of the pale of sympathy, and
thus laid the foundation for this disregard of
animals in the light of our fellow creatures.

It is certain that during the Middle Ages, when
the Roman Catholic Church was dominant, there
was in this respect, little or no progress in humanit-
arian feeling, the indifference of Roman Catholicism
to the claims of animals being broken only by the
splendid example of St. Francis of Assisi, whose
profound sense of brotherhood and pain and
tenderest pity is the more remarkable owing to its contrast with
the general callousness of his contemporaries. It
was this last profound of sympathy which, surviving in large
measure even to modern times, caused Buddhists
to speak of Christendom as 'the hell of animals.'

When we come to the Renaissance, however, we
find, with the revival of learning, a revival also of
the humanitarian spirit, many humane sentiments,
for example, being observable in the writings of
More and Erasmus, Montaigne, Shakespeare, and
eastern Philosophy and poetry to the instinct of
compassion paved the way for that advanced 18th
sentiment which found its fullest expression in
the saying of Voltaire, that 'without humanity,
the virtue which comprehends all virtues, the name
of philosopher would be little deserved.'

Philosophers and poets vied with one another, through this
era of awakening, in a recognition of the claims
of common life on the heart of human-kind, and
the post-revolutionary writers have continued to
develop more and more the ethic of humaneness;
it is sufficient to mention such names as those of
Thomson, Pope, Goldsmith, Cowper, Burns, Shelley,
and Wordsworth, to show how largely our modern
poets have been influenced by this humanitarian
ethic. It is to the last hundred and fifty years, in
fact, that Western humanitarianism, in the sense in
which we use the word, owes its origin; and it is
of Western humanitarianism only that we have pro-
pose to speak.

The first point which needs to be emphasized is that
humaneness is based on the broad ground of universal sympathy, not
with mankind only, but with all sentient beings, such
sympathy being, of course, duly proportioned to the
sensibility of its object. Humanitarianism is
not to be confused with philanthropy—love of
mankind—on the one side, or with zoophily—
kindness to animals—on the other; it includes
and comprehends both.

'It is abundantly evident,' says Lockey (Europe's Morals,
London, 1800, p. 250), 'from history and from present
experience, that the instinctive, or natural feeling of dis-
gust, caused by the sight of the sufferings of men is not generi-
dally different from that which is caused by the sight of the
sufferings of animals. . . . At one time the benevolent affections
reinforce merely the family: soon the circle expanding includes
first a class, then a nation, then a coalition of nations, then
all mankind. Then the further influence is felt in the dealings
of man with the animal world.'

Humanitarianism, then, is the application of an
ever-widening circle of friendship and
broad brotherhood between all living creatures; and
a humanitarian is he who has substituted this wider
sympathy for the partial benevolence which is
restricted to the narrow circle of his own
countrymen or kin. 'The time will come,' wrote
Bentham (Principles of Penal Law, ch. 16), 'when
humanity will extend its mantle over everything
which breathes. We have begun by an attempt to
attend to the condition of slaves; we shall finish by
softening that of all the animals which assist our labours
or supply our wants.'

But, before we proceed further, it may be well
to clear away certain common misapprehensions
by a short statement not only of what humani-
tarianism is, but also of what it is not. For
example, it is not Brâhmanism. What it con-
demns is not the taking of life, as such; but the
unjustifiable or wanton taking of life through
callousness, ignorance, or force of habit; and
there is no point whatever in applying to humanit-
arianism the trite story of the Hindu whose
principles forbade him to drink water when the
microscope had revealed to him the infinitesimal
creatures that inhabit it.

Nor are humanitarian doctrines, as Nietzsche
and his school would have us believe, an offshoot of
Christianity; for, as has already been shown,
they go far beyond the Christian ethics in all that
relates to the lower animals. Not a number among
their professors many well-known names
that lie altogether outside the Christian sphere of
thought. Nor, again, is humanitarianism alto-
gether identical with 'altruism,' the due regard
for the interests of others, for it is to satisfy his
own needs and instincts—involved in those of the
sufferer—that the humanitarian takes action; it
is self-sacrifice rather than self-sacrifice that he
desires.

Finally, humanitarianism is not, as is often
assumed by its critics, a merely negative, prohibi-
tive, and ascetic view of life by which we are
constrained to desist from certain practices in
which we might otherwise take pleasure; on the
contrary, by discovering for us a freshness of
relation towards vast numbers of our fellow-
creatures, it opens out new fields of pleasurable
friendship which have hitherto been neglected,
and points the way to a fuller and better realiza-
tion of what is beautiful and true.

Contrast, for instance, the wholesale destruction of sea-
birds, fowl for their feathers, or for their perfume,
that disgraces many parts of our coast, with the
scene that may be daily witnessed in winter time
on the Thames Embankment — the feeding of
scores of gulls by their human friends and protec-
tors under terms of perfect amity and trustfulness.
Can it be doubted which of these two attitudes
between animals brings the greater pleasure to
mankind?

Dismissing, therefore, these false ideas of humani-
tarianism, we shall try to grasp its true purport
and significance as part of the modern democratic
movement; for there is no more essential mark of
democracy than the fostering of kinship and
understanding in place of division and distrust.

In holding that the difference between human and
sub-human is one of degree only, and not of kind,
the humanitarian has the support not of sentiment
alone, but of science. 'The trend of investigation,'
says Wesley Mills in his work on The Nature
and Development of Animal Intelligences (London,
1886, p. 21), 'thus far goes to show that at least
the germ of every human faculty does not lie in
some species of animal. . . . Formerly the line was
drawn at reason. It was said that the "brutes"
cannot reason. Only persons who do not them-

sew reason about the subject with fact before
them, can any longer occupy such a position.' In
HUMANITARIANISM

like manner E. P. Evans points out, in his Evolutional Ethics and Animal Psychology (London, 1895), p. 164. 'There is no man as truly a part and product of nature as any other animal, and the attempt to set him up as an isolated point outside of it is philosophically false and morally pernicious.' Thus the old 'anthropocentric' position is being more and more abandoned, and it is no longer possible to draw an absolute line of demarcation between men, as 'persons' and 'ends,' and animals, as 'more things,' such distinctions being a thoroughly unsound basis for any ethical structure, inasmuch as the more highly organized animals possess, though, of course, in a lower degree, the qualities of true personality. Even the expression 'man and the animals,' though unavoidable in common speech, is philosophically incorrect, for man is himself a part of the great animal kingdom, and cannot, therefore, claim the relationship. We have from science itself the clearest assurance that man is an animal, and that the great gulf which was supposed to exist between human and non-human has existed only in imagination.

For this reason humanitarianism claims for animals, as for men, a meaning of individuality and freedom, a space in which to lead their own lives—in a word, 'rights.' It is unnecessary here to enter into the wide field of discussion as to the meaning of this term; for, if objection be taken to it, it is possible to consider the question from the other, the correlative, side, and to arrive at the same conclusion merely by the use of the term 'duties.'

The essential part of the humanitarian contention is that there is no absolute difference between mankind and the animals; that, if man has reason, animals have the germ of reason; that, if man has 'rights,' animals have the same in due degree.

With regard to human rights, it is sometimes said that 'man can take care of himself.' This, however, is not always the case; for (to refer to two classes only, the pauper and the criminal) it is evident that the unfortunate inmates of workhouse and prison are not able to take care of themselves, but are as helpless in the hands of others as any animal could be. The rights of men are admitted in theory, but often violated in practice. We speak of all men as brothers; but, when it comes to giving practical proof of our brotherhood with paupers and criminals, we too frequently show our treatment of them that we really regard them as a wholly alien class. The same is true of the usage accorded to subject races, aborigines, and all who, in the aggrandisement of one nation at the expense of another, are liable to find themselves at the mercy of their brother man.

Again, when we turn to the protection of animals. Again, humanitarianism holds that we ought to help men first and animals afterwards. But, if the principle which prompts the humane treatment of men is the same essentially as that which prompts the humane treatment of animals, how can we successfully safeguard it in one direction while we violate it in another? By condoning cruelty to animals, we perpetuate the very spirit which condones cruelty to men. Humanitarians do not say that the lower forms of life must be treated in the same way as the higher forms, but that in education by example we must be careful to inflict no unnecessary, no avoidable, suffering. This is briefly expressed in the manifesto of the Humanitarian League, which enforces the principle that 'it is iniquitous to inflict avoidable suffering on any sentient being.'

Of the societies which work for humane purposes the one which directly concerns itself with this fuller principle—the immediate elevation of the status of the human and non-human animals is the Humanitarian League, which, while recognizing that there is need of concentration in effort of this kind, and the desirability that special cruelties should be dealt with by special organizations, is nevertheless designed to supplement these labours by showing that all such efforts, however, momentous in practice, spring in reality from a common source and convey a common object. It is well described by the words of its charter where there is now misunderstanding and strife. How wide a scope there is for humanitarian propaganda, even in this 19th century, may be judged from the number of various societies for the reformation of the use of the sword, the prevention of cruelty to animals, the amelioration of the suffering of poverty and disease, and the enforcement of the prevention of cruelty to animals, the reformation of the use of the sword, and the prevention of cruelty to animals, the amelioration of the suffering of poverty and disease, and the enforcement of the prevention of cruelty to animals.
HUMANITARIANISM 839

Given a race of so-called "brute-beasts" (and it is open to
question whether this hardness of the common-nonsense reacts
in its turn on the common treatment of animals), which are
sacrament to the doctrine of the last Judgment, it cannot be
conceivable, it is inevitable that they should be used or ill-used
in various ways according to the wishes and instincts of their
masters. Thus, regarded from the several standpoints of
the human temperament—the impulses of hunger, of recreation,
of curiosity, of the animal is cortexing to eat, something to
hunt, something to experiment on; and we are brought face to
face with the necessities of science, sport, and vivisection.

It does not, however, fall within the scope of
this article to do more than indicate the general
aspects of humanitarianism, and we pass on to
speak of some of the common objections that are
against humanitarian principles. The first
and most prevalent of these objections is that
drawn from the poet's picture of 'Nature red in
tooth and claw,' which represents humanitarianism
as in conflict with the stern facts of existence.
It is said that the animals themselves prey on
one another, and that the law of nature is founded on
intermediate conflict and sacrifice. But this, though
true in part, is not the whole truth; for, while
appealing to the law of competition, it leaves out of
sight the not less important law of 'mutual aid,'
and evades the fact that, while some animals are
predominantly, others are mainly social in
their nature, and that there is no reason why
man-kind, whose instincts are of the social order,
should violate its own nature in order to imitate the
fecundity of the prey. Nor is it true that an analogy
can be established between the suffering inflicted
in nature and the artificial and unjustifiable,
because unnecessary, cruelties of man; for the
best naturalists are of opinion that

'I Nature red in tooth and claw

is a picture the evil of which is read into it by our
imagination, the reality being made up of full
and happy lives, usually terminated by the quick-
est and least painful of deaths' (A. R. Wallace,
Darscitism, London, 1888, p. 40). All these
conditions are wanting in the unnatural cruelties against
which humanitarianism protests.

Then, again, we are confronted with the argu-
ment drawn from that much misapprehended term,
"consistency." Where will you draw the line?
It is a question frequently put to the humanitarian,
who is reminded that, if he be 'consistent,' he
will be precluded from defending his crops against the
ravages of wild animals, and even from cultivating
the ground, because of the injuries done by these
plough to earth-worms and to the lowest forms of
life. But here there is, of course, a complete per-
version of the humanitarian doctrine, which, as
has already been stated, asserts that rights are the
same in kind but not in degree, and that we owe
to all sentient creatures a universal, but not an
absolute, justice. We are not bound to starve
our own race by abstaining from agriculture on
account of the injury done to earth-worms, but we
may all remember what Cowper (The Task, bk. vi.)
says of the man 'who needlessly sets foot upon
a worm.' The true consistency is that which has
regard to the direction of one's course; and,
because the whole journey cannot be accomplished
at once, it does not follow that no step should
be taken.

Equally pointless is the cry that is raised against
the 'sentimentality' of humanitarians, 'sentim-
ent' being one of those vague, indefinite terms
which are used as a substitute for argument.
That there is much that is ultra-sentimental in
the humanitarian temper, for instance, as in the
partial benevolence and ill-adjusted 'charities'
—will not be denied; nor are humanitarians more
exempt from animal defects—danger of falling into excess in the advocacy of their views.
But, though the charge of sentimentality may be
fairly urged, e.g. against the anti-vivisectionist who,
while denouncing the cruel experiments of physi-
ologists, is himself an advocate of vivisecting con-
verts with the cato's nine-tails, it cannot lie against
the all-round humanitarian who pleads for the
adoption of some rational and comprehensive
principle. It is, in fact, not on mere sentiment-
ality, but on a wider and more philosophic view
of the subject, that humanitarianism relies. 'As
long as it has been said,' as certain favoured aspects
of humaneness are exclusively insisted on, as long
as pity is felt and expressed for this or that partic-
author form of human suffering, while others of
equal or greater importance are neglected or ridi-
culed; as long as the compassion which is claimed
for men is denied to animals, or extended only to
certain classes of animals—so long will it be diffi-
cult to appeal successfully from the narrow selfish
ness of personal interests to the higher and nobler
sentiment of universal brotherhood.'

Perhaps no more effective proof can be produced of
the inevitable further growth of humanitarian
principles than a consideration of the alternative
that must be faced by society if humanitarian-
ism is to be disowned. Whether wisely or unwis-
ly, we have now reached a certain transitional
stage of humane development, both in our manners
and in our laws, and those who would disavow us
from continued advance on the same lines are
bound to frame some other policy for our guidance.
If we are not to go forward, are we to turn back?
Or are we to remain at the precise point to which
we have now attained? It will hardly be lost on
the present very confused state of English law
and feeling on humanitarian subjects repre-
sents the golden mean which is necessary in order
improvement; it follows, then, that, if progress is
to be barred, we must henceforth return to that
'old brutality' which certain writers affect to
regret that we have 'allowed to die out too much.'

To state this alternative is sufficient to show that
the future lies with humanitarianism. It is ob-
vious that we shall continue to advance in the
same direction as in the past, and the gradually
expanding sense of sympathy and kinship will
bring with it a gradual but certain increase in the
humanity of the treatment which we shall accord
to every living creature.

Herein, then, lies the strength of the humani-
tarian position, that its principle is a consolidation
of the countless humane impulses which are
spreading everywhere in the human heart, and that on
an instinct so simple as to be intelligible to a child it
builds a progressive ethical code, not as
only the intellect of a philosopher. It is an amusing
comment on the prevalent ignorance of humani-
tarianism that those who hold a faith which so
profound a thinker as Socrates cherished as
the basis of morals' are often lightly dismissed
with the remark that 'their hearts are better than
their heads.' It is impossible, with strict regard
to truth, to return this compliment by saying that
the heads of such foolish jesters are better than
their hearts, for head and heart alike must be in
an evil case when the great duty of humanity does
not make itself respected. We have advisedly
spoken of this principle as a 'faith,' for it is indeed
the ethical belief of the future—the faith of un-
iversal kinship—and no infidelity can be so grievous
as that which hinders men from recognizing their
own kindred, and makes them deny that owners
in life which wisdom sees everywhere, and to
which folly is everywhere blind. 'The custom
has carried man from man,' says Edward Car-
penter (Cwizieshow, London, 1889, p. 196), 'yet,
when at last in the ever-branching series the
complete human being is produced, it knows at
once its kinship with all the other forms. More,
it knows its kinship with the animals. It sees

Greeks, and Italy, among the Celts, Teutons, and Slavs, the Semites and Egyptians, the early Japanese and others, and among some American tribes, and particularly the Mayas and Aztecs. Further, it was rarer in Vedas than in Brahmanica.

Among the Africans it has been observed that the power of the nation granger the sacrifice. The Aztecs themselves did not adopt the practice until the second, two hundred years before the conquest; the sacrifices, rare at first, became more frequent in the wider extent of their empire; till, at length, almost every festival was closed with this cruel abomination.

From the legal point of view every human sacrifice is a ceremonial murder. As such, cases which are technically sacrifices cannot be treated differently from those which are not. The tendency, not only in historical writing but in the thought and language of contemporary periods, is to class all sacrificial murder as sacrifices. Another qualification of human sacrifice is that, like the majority of all sacrificial acts, it is generally a collective undertaking; when an individual executes it, he is, as a rule, the representative of the community or at least of a class within it. This fact serves to throw into relief the close connection that is maintained from the earliest to the latest instances between human sacrifice and the reproductive functions of the community. Capital punishment in its simplest and most primitive form is a more or less unconscious act of social revenge. The essence of all punishment is the satisfaction of resentment. The principle of ratio is the result of the organization of this fundamental moral impulse. But before it is organized, and even in civilization on occasions when the crowd is master, and justice yields to mob-law or lynch-law, the passion of resentment is rarely satisfied by any atonement save that of death. There is such a phenomenon as a collective lust for blood, and, sociologically speaking, we have a right to class together the behaviour of the Commons in the Revolution of 1789, and of the Aztecs in their systematized orgies of human sacrifice.

Cases like these show moral resentment as a perversion, but there seems to be little distinction between them and the cases of primitive social revenge. Lastly, it was to be expected, and is

For instance, it was known in ancient India,

1 MYTH. 825. quoting authorities.

3 Westernmark enumerates the areas in which human sacrifice has been practised (I. 430 f.).

HUMAN SACRIFICE (Introductory and Primitive) 841

proved by the facts, that the history of society up to quite recent times is characterized by a special sense of collective responsibility. The belief that national or tribal disaster was due to national or tribal sin is very real. It is a question whether the sources of this powerful idea is to be found in the sum of individual selfishly or self-regarding impulses, the sum of individual desires to shirk individual responsibilities, or in the mutual imitation of elementary instincts of cooperation. However that may be, the whole history of human sacrifice is linked together by ideas of vicarious suffering, substitution, and representation, no less than by its form of collective murder.

Looking at this and the extensive and normal application of the biologicosocial law that the individual is inferior to the race, and, as against the race or community, has no rights; 'it is expedient that one man should die for the people' (Jn 11).

In that stage of culture when all social organization is religious, justice and worship are apt to be confused. Some cases, however, still show collective retribution. Von Kotzebue with great insight observes of the Sandwich Islanders that they 'sacrifice the sinner to avert the evil visitation sent to bring about the execution of justice.' The ancient Romans are said to have put corn-thieves to death as a sacrifice to Ceres. Among the Hebrews the ban, or kasher, was placed upon malesaectors as enemies of Jehovah. It was

protestation to Jehovah. . . . The person who was 'dedicated' generally by a solemn vow, to Jehovah, were put to death, frequently by fire, whereby the resemblance to an ordinary murder was rendered still more apparent; their dwellings and property were also consumed by fire; their bodies were usually put on the wheel; and the affair was, of course, attempted to inhibit the impulse, but this, being identical with the feeling of duty, is self-sufficient, whether in the individual or in the community.

The personal aspect of human sacrifice has been emphasized by the fact that semi-civilized and even civilized societies have, for various reasons, been in the habit of practicing a severity which far surpasses the rigour of the laws. To quite recent times the penalty of death was prescribed for the majority of offenses in all civilized communities. There can be no doubt that the spectacle of capital punishment offered to the public in England, for example, till the last century, afforded the same instincts as did the gladiatorial games of Rome and the sacrificial massacres of Mexico. This severity is connected with despotism or religion. In either case, acts which are regarded as semi-divine or divine beings are punished with more severity, because the community fears that the divine wrath may be turned against itself.

This has actually been made an argument for applying the death penalty to all offenses. Thus, the Peruvians held that 'a culprit was not punished for the delinquency he had committed, but for having broken the commandment of the Ynca, who was respected as God,' and that, therefore, the slightest offense deserved death. Every crime, in Hebrew theory, involves a breach of God's law, and no punishment is too severe for the ungodly. These ideas were adopted by the Christian Church and by Christian governments.

A link between the conception of the god and his offenders holiness and the personal aspect of human sacrifice may be found in the reason given for the sacrifice of criminals—that they are already hateful to the god. Any such convenient offender persons may, again, almost suggest the principle of preventive sacrifice or penalty on the Slave Coast.

1 The object of human sacrifice seems to be to gratify or saliate the malice of the gods at the expense of the criminal, but not instead of leaving it to chance—the victims are, in fact, slain for the benefit of the community at large.

A considerable proportion of sacrificial cases may be regarded as founded on a nervous collective 'sense of sin,' which should perhaps be explained as the sense of responsibility in the making of an

suggested, is on the normal lines of the evolution of the custom, and is the final development of the original inclusion of the social habit. It is not sacrifice, except in a large metaphorical sense, because it is

One might urge that, even after the administration of justice has become altogether separated from religion, there is no break of continuity—that in effect a new religion shows itself in the interval, and that capital punishment, or any punishment, is still a sacrifice to justice.

The difference is that no supersition ideal exists to ruin the destruction of the criminal life, and that the justice thus satisfied is not a personalized power. Westernmark's statement lays stress on the death of the victim as propitiating the deity. The deity thus being the personification of the moral feelings of the community repeats the moral, retributive impulses of the community. He requires not a sacrifice, but a just penalty. Westernmark notes that 'there can be no moral scruples in regard to a rite which involves a punishment regarded as just.' But it would be a mistake to assume that moral scruples are the early offerings of any form of human sacrifice. All religious acts, however horrible, are as hypothesi sincere, and therefore untouched by moral scruples as we are inclined to excuse them in Europe to justice. The ancient Romans are said to have put corn-thieves to death as a sacrifice to Ceres. Among the Hebrews the ban, or kasher, was placed upon malesaectors as enemies of Jehovah. It was

protestation to Jehovah. . . . The person who was 'dedicated' generally by a solemn vow, to Jehovah, were put to death, frequently by fire, whereby the resemblance to an ordinary murder was rendered still more apparent; their dwellings and property were also consumed by fire; their bodies were usually put on the wheel; and the affair was, of course, attempted to inhibit the impulse, but this, being identical with the feeling of duty, is self-sufficient, whether in the individual or in the community.

The personal aspect of human sacrifice has been emphasized by the fact that semi-civilized and even civilized societies have, for various reasons, been in the habit of practicing a severity which far surpasses the rigour of the laws. To quite recent times the penalty of death was prescribed for the majority of offenses in all civilized communities. There can be no doubt that the spectacle of capital punishment offered to the public in England, for example, till the last century, afforded the same instincts as did the gladiatorial games of Rome and the sacrificial massacres of Mexico. This severity is connected with despotism or religion. In either case, acts which are regarded as semi-divine or divine beings are punished with more severity, because the community fears that the divine wrath may be turned against itself.

This has actually been made an argument for applying the death penalty to all offenses. Thus, the Peruvians held that ' a culprit was not punished for the delinquency he had committed, but for having broken the commandment of the Ynca, who was respected as God,' and that, therefore, the slightest offense deserved death. Every crime, in Hebrew theory, involves a breach of God's law, and no punishment is too severe for the ungodly. These ideas were adopted by the Christian Church and by Christian governments.

A link between the conception of the god and his offenders holiness and the personal aspect of human sacrifice may be found in the reason given for the sacrifice of criminals—that they are already hateful to the god. Any such convenient offender persons may, again, almost suggest the principle of preventive sacrifice or penalty on the Slave Coast.

1 The object of human sacrifice seems to be to gratify or saliate the malice of the gods at the expense of the criminal, but not instead of leaving it to chance—the victims are, in fact, slain for the benefit of the community at large.

A considerable proportion of sacrificial cases may be regarded as founded on a nervous collective 'sense of sin,' which should perhaps be explained as the sense of responsibility in the making of an
the central feature in the pantheons of human sacrifice, and therefore require illustration.

The Chippewas, suffering from an epidemic, regarded it as a divine punishment for their wickedness. The most beautiful girl of the tribe was set adrift in the river and allowed to drown, as a means of staying the plague.1 Similarly the Bootians sacrificed a boy to stay a pestilence.2 Referring to the Hebrews, Philo of Byblius says:3

"It was the custom among the ancients, in case of great danger, that the rulers of a city or a nation, in order to avert universal destruction, should give the dearest of their children to be killed as a ransom offered to avenging demons."4

In the Nipmuc Country, a young woman is sacrificed to take away the inequalities of the land. As her body is dragged along in a merciless manner, as if the weight of all their wickedness was thus carried away.5 "Wickedness, wickedness!" She is drowned in the river.6 Another account speaks of two sacrifices, one for the land, the other for the river.

The two human beings were offered as sacrifices, to propitiate their heathen deities, thinking that they would thus alone for the individual sins of those who had broken God's laws during the past year. . . . Those who had fallen into gross sins during the past year, or as boozers, thieves, fornicators, sorcerers, sorceries, witches, wickedness, etc.—were expected to stay in twenty-eight years, or 63, 7, 64, as a fine; and this money was to be taken into the interior, to provide for the sickly persons, to be offered as a sacrifice for all these unclean-nesses. A sacrifice, in a sense, may be a substitute for his father's sins for his people; a criminal, similarly, represents the guilty soul of the community. Westernmarck has rightly said:7 "A representative of the community which has incurred the anger of the gods, and is accepted as a substitute for the principle of social solidarity."8

The Chukchi in 1814 sacrificed a respected chief to stay an epidemic which was destroying both men and reindeer. The sacrifice of every living creature born in the following spring, which constituted the ancient Italian rite of the Fer Sacrum, was performed in times of peril or pestilence.9 Human sacrifices in cases of drought and famine is frequent.8 When unseasonable weather threatened the crops, the Peruvians sacrificed children.10 The people of the Great Benin, in case of excessive rain, and the king:11 to make full, and sacrifice to the gods. Accordingly a woman was taken, a prayer made over her, and a message giving the Rain God power in her mouth; then she was clamped to death and put up in the execution tree so that the rain might shower. In his columns, there is too much blood, in the belief a danger of the crops spoiling. Overseas (the king) can sacrifice to the Sun God.12

This instance is instructive. It includes a plain connection with the penal aspect of sacrifice, and also the later notion that the slain person acts as a messenger to the god. The possibility of using sacrifice, not merely as an expiation, but as an expiation in advance—in other words, as a preventive measure was suggested. How such rites may come to be easily become positive is well shown by another case from Great Benin. Sir Richard Burton saw a young woman13 leaped on a scaffold upon the summit of a tall blasted tree, and being devoured by the turkeys-hawks. The people determined that "sacrifices" are the "right and proper thing to be done." Such agricultural sacrifices are common enough:14 they tend to become annual and seasonal. Westernmarck shows the reason for supposing that the victim is by no means always regarded as a representative of the corn-spirit, as is argued in Fraser's hypothesis.15

Ancient Greeks, Gauls, Semites, and Hindus sacrificed human beings in war, either to guard against ill-omens or to propitiate the divine being.16 D. Dorman, Primitivae Superstitiones, Philadelphia, 1881, p. 205.

21 "Vom. L. 58.

who had brought it about.1 Thus far the principle of sacrifice may be said to be illustrated by the Chukchi sacrifice of two hundred children, when the city was in the last stage of siege.2

The transition from the idea of securing the lives of the community by sacrificing the life of one man to the idea of propitiating a malignant supernatural power is naturally easy in such circumstances. The Hebrews, it is said, "and the high priest propitiated their god of battle by human sacrifice."

"On the eve of a battle, or when a new fort or even as an important victory is to be hailed or when danger or was to be averted, this sacrificial being may be propitiated with human sacrifices; or sacrifice was offered to the god of battle, human sacrifice."

Sacrifice after victory may, when the idea of sacrifice proper have fully coloured the rite, be regarded as a thank-offering. But revenge on the enemy, the fulfillment of a vow (itself connected with the impulse of resentment), or further, propitiation, may in many cases inspire the custom.3

An important feature of this vicarious stone-Member, whether expiatory or preventive, is that the victim is not chosen at random. He may be a worthless person, a criminal or outcast, a slave, or a foreigner. It is the child, for instance, who is the dearest of youth, or even the king of the people. The precise character of the person slain generally qualifies the meaning of the rite. The example of the child, for instance, a substitute for his father's sins for his people; a criminal, similarly, may be the guilty soul of the community. Westernmarck has rightly said:7 "is a representative of the community which has incurred the anger of the gods, and is accepted as a substitute for the principle of social solidarity."8

The stoning of Christ is conceived of as a sacrifice, and His personality as fully representative.9 According to the Western Church, Christ discharged the punishment due to the sins of mankind, and propitiated the justice of His Father, in His capacity as a representative of the human race, in the East, where it was maintained that the deity suffered (though he suffered through the human nature which he had made his own), the idea of substitution could hardly take root, since, as Harnack (Hist. of Dogmas, Ill. 812 f.) remarks, the dying God-man really represented no one. The Greek Church regarded the death of Christ as a sacrifice, and the Romans, again, as a ransom, often also accepted by the most important of the Western Fathers, although it daily contradicted their own theory of atonement.10

When men offer the lives of their fellow-men in sacrifices to their gods, they do so, as a rule, in the hope of thereby saving their own. Human sacrifices is essentially a method of insurance—alms, no doubt, according to our ideas, but not an act of war. Once practiced for the benefit of the community, or in a case of national disaster, it was often cruel than the inflection of capital punishment on the ground of the crime itself. It was used to symbolize the sacrifice of a life to the battle-field on behalf of the country. The custom of the human sacrifice exists at the present time. It is maintained that taken to save the lives of many, or that an individual individual is put to death for the purpose of preventing the death of somebody who has a higher right to live. Sometimes the chief is sacrificed in times of scarcity or pestilence, but then he is probably held responsible for bringing calamity. Frequently the victims are prisoners of war or other aliens, or slaves, or criminals, that is, persons whose death is little regret. And in many cases they are the only victims allowed by custom.11

The execution of heathens, as such, is a culmination of the social principle that the Godhead is deeply interested in the loyalty of the believing people. The asul do de 6 is a true human sacrifice of the penal species; it might readily take on the character of sacrifice proper, as it probably has done in the analogous cases of Hebrew extermination of the heathen and Mohammedan extermination of unbelievers, though in Europe this character has not been emphasized.

When the principle that the death of one may save the lives of the community has become part of

the popular creed, voluntary sacrifice may be undertaken. Ancient Rome owed victories in battle to the deaths of heroes, such as Decius Mus. This devotional attitude towards death and an act, and had a prescribed ritual. The Sacerdii of the Japanese is certainly a sacrifice; when committed at the funeral, the dead man, or his person is it is the nature of an offering to the soul of the dead, in that form which ensures that the dead shall have companions and attendants. The Chukhi and Samoyeds are curiously addicted to suicide; in fact, there is a suicidal belt across Northern Asia, including the Japanese. The Samoye holds that the act is in itself pleasing to God, who looks upon it as a voluntary sacrifice, which deserves reward. The Chukhi sacrifices their own lives in times of national danger or epidemic. The ari of Hindu widows on the pyres of their dead husbands is repeated elsewhere, as in Uganda, the East Indies, Fiji, and the New Hebrides. Such sacrifices are analogous to acts of asceticism, and, like these, is often connected with the desire for betterment in the world beyond the grave.

Human sacrifice was performed, also, to save the life of some particular individual. The Guatemala's resort to it when no other means of curing a sick person failed. To-day in Morocco, if a child dies, the custom is to congratulate the parents—Your child took away your misfortune. The practice of sacrificing the first-born child seems to have been an article of ancient Semitic religion; the origin of the Pasover is most probably to be traced to it. The practice is found, more or less systematized, in Australia, China, America, Africa, and Russia. Infanticide, at a stage of culture when all social custom is religious, naturally assumes the character of a sacrifice. There may be various motives for the act, but only cases where there is a real substitution for the child another person can be included under human sacrifice. Substitutional sacrifice for individual benefit occurs in Central America, Peru, Tonga, Tahiti, the Philippines, India, the Dayak coast, West Africa, and Western Asia. It was frequent in ancient Italy, and both Nero and Hadrion were benefactors of the rite.

There is a curious practice, connected with the doctrine of the soul, of sacrificing an individual, generally a child, to remove barrenness from women. As Westernmark explains it, the failure to conceive is attributed to some god keeping back the children which would otherwise be born in the due course of nature. The victim is a substitute.

Certain cases of child-sacrifice seem to suggest that the child, being in a sense a duplicate of the father, places the life of the father in danger.

When the idea is arrived at that the person sacrificed is a gift to the deity, we are in the sphere of sacrifice proper. But this is clearly later than the penal conception and the substitutional conception of the rite. The gods of the Gold Coast require attendants:

'The gods of the human victims sacrificed to them are believed to pass into a condition of ghostly servitude to them, just as those sacrificed at the funerals of chiefs are believed to pass into a ghostly attendance.'

The belief is rare, but, as added to the service of the dead, is frequent. The type of it is the Hindu ari. Men require both wives and servants in the other world. India, probably even in Vedic times, and Central America are the chief areas of the practice of immolating wives and slaves or friends for the dead, but it is found all over the world. Blood-revenge in many cases is really a human sacrifice to the spirit of the murdered man. The completed revenge is frequently believed also to safeguard the avenger from the malignancy of the unavenged dead. Such ideas are merely superimposed upon a practice originally inspired by the impulse of resentment.

Other ideas, probably later than the institution of the rite, are the conception that the man sacrificed is a messenger to the gods; and he becomes, when sacrificed at or in a near time, a protecting demon of the place. Probably the original intention was to protect the living from the risks incurred by occupying a site belonging to supernatural powers. This is seen in the case of sacrifices made at the building of bridges (q.v.). Human sacrifices to the powers of water, seas, or river-demons, are common enough, and folklore is full of stories of them.

Cannibalism (q.v.) is probably not to be regarded, as Letourneur regards it, as the original sin of mankind.

'The cannibalism of modern savages,' Westernmark concludes, 'is not a survival from the first infancy of mankind, nor is it representative of a stage through which the whole human race has passed.'

But there can be little doubt that primitive peoples, like barbarous and even civilized nations on occasion, practised cannibalism as an infrequent habit. Now, according to one theory of sacrifice, the essence of this central act of worship is the presentation of a common meal for the god and his worshippers. A priori there is every reason to expect that the idea of cannibalism should be found in many cases of human sacrifice. The Central Americans, especially the Mexican, offered the blood and the heart of the victim to the god. The priest cut open the breast, tore out the heart. This was 'waved' as an offering to the Sun; frequently it was placed with a golden spoon in the mouth of the image. The Iroquois, the Khonds and Ooryals of India, the Fijians, and peoples of the Gold Coast, had similar ritual and belief. Cannibal meals, which possess a magical or religious character, satisfy the above definition of sacrifice, if the victim is slain for the purpose. The most inerterate followers of the cult of human sacrifice, as it may truly be called in this case—the Mexicans—ate portions of the human victims slain on their altars. The Mayas, Nicaraguans, and Peruvians did the same. In Nigeria, human sacrifice offered to appease the gods, or to avert misfortunes, is not considered to be complete unless either the priests or the people eat the bodies of the victims. In some parts of the flesh is distributed among the entire population. The practice is found in the Solomon Islands, Hawaii, and ancient India, always in connexion with a sacrifice. Two species of cannibalism are distinguished in Western Africa, the one a luxury, governmentally, the other sacrificial, and in the latter the priests are the chief partakers.'
HUMAN SACRIFICE (Introductory and Primitive)

"The sacrificial form of cannibalism," says Westermarck, "obviously springs from the idea that a victim offered to supernatural beings participates in his sacrifice and from the wish of the worshipper to inherit something of his benign virtue. So also the divine qualities of a man-god are transferred to the person who eats his flesh or drinks his blood. This was the idea of the early Christians concerning the Eucharist."

Similarly, the eating of human flesh is in various cases supposed to have a magical and supernatural effect. The circle of these ideas is completed by the remarkable belief, found in the majority of races, that the flesh and blood of executed offenders have magical power. The mere fact of a violent death, when imposed on a victim by corporate action, is always impressive. It is possible that we have here the psychological explanation of the magical virtues with which such human sacrifices are credited. They are the sign and seal of the sacred forces of the community in action.

Westermarck finds, in criticism of Fraser's hypothesis, "no instance of an expiatory sacrifice being connected with a ceremony of sin-transference." The merikà sacrifice of the Khonds is a notable example of human sacrifice. Its meaning is not clear. It is said to be the victim was a representative of the corn-spirit and was sacrificed in order to ensure good crops. On the principle chiefly of the resurrection of the spirit involved in the interpretation involves the assumption that the view of the merikà as a victim offered to deity, the Earth-goddess, Tari Pennu, is a superstition. Macpherson notes that the merikà was sacrificed "upon the occurrence of an extraordinary number of deaths by disease; or should many die in childbirth; or should the flocks or herds suffer largely from disease, or from wild beasts; or if the crops grown were divided by drought," also whenever any calamity occurred to the chiefs or their families.

From this and other evidence, Westermarck concludes that the theory of substitution accounts fully for the rite, and that the hypothesis of the identification with the corn-spirit is arbitrary.

See further, the 'Indian' article, § 4.

Magical efficacy is universally attributed to human blood, probably because it is human, that is, the blood of the lord of creation, who, as such, is not normally an article of food. Human sacrifice to the dead is sometimes for the purpose of supplying them with food. But this is obviously exceptional, just as the dead are themselves in an exceptional state. They are now supernatural, and supernatural (in the literal meaning) should be their sustenance. There is no relic of cannibalism in human sacrifice, but the principles of religious cannibalism are latent in it.

Ancestor-worship, it is possible, may often have led to the idea that a supernatural source of magical power may be acquired by eating ceremonially a human, or indeed any living, victim. If the dead are divine, new additions to the list of the divine can be made by death. The murderer has an option on the spirit of him he slays. Bloodthirsty priests and deports may at times have worked their murderous wills according to some such principle. It is necessary to insist on this, as also on the satisfaction of the social lust for blood. The latter certainly is to be seen in the merikà sacrifice; both the latter and the former are found in the Mexican holocausts as were they in the auto da fé.

The gods of Mexico were enswathed with horror; but the human sacrifices almost daily consummated by gluttony were appreciated by the congregation as intensely as the gladiatorial combats were by the populace of Rome. In some cases...
unfit for sacrifice, and therefore their flesh is not to be eaten. When the medaka entered the earth, the gods surrounded it to prevent its escape. There it was turned into rice, and therefore rice is now sacrified.

According to the Kalidā Purāṇa, slaying a sacrifice, even of a man, is ipso facto no murder. This seems to be an exaggeration, for the Kalidā Purāṇa speaks of the sacrifice of a man, not of a human being. The sacrifice of a man is prohibited by the Brahmans and the Kṣatriyas. The sacrifice of a human being is not sanctioned by the Veda.

With regard to the difficulty of representing the god, a case in point is given by the Tatttvāyā. For the purusa-mahā, human sacrifice, the Tatttvāyā enjoins that to a deity of the Brahmans, the Brahmans must be sacrificed; to a deity of the Kṣatriyas, the Kṣatriya. Possibly the clue to representation is in the practice of periodic self-sacrifice, and perhaps a kind of human sacrifice, being made by sacrifice into a deity, it is natural that his attributes should be repeated at the next sacrifice. Thus a particular god is represented. Then, later, in his incarnation, he is regarded as a victim, and the victim retains the character of the god. See, further, the 'Indian' article.

Often the choicest specimens of humanity are required for human sacrifice. 'The death of the righteous makes atonement,' and human sacrifice is required. The Kalidā Purāṇa enjoins that the victim must be free from physical defects and unstained by crime; nor may it be a female. The case of slaves, malefactors, and diseased persons has been noted.

Vicious atonement becomes vicious in a secondary sense, when another person is sacrificed instead of the original victim. In Eastern Africa, a freeman guilty of causing a congocilla close to the chosen abode of the deity is liable to be offered as a sacrifice to the god who has been annoyed, but he may redeem his life by giving up one of his slaves to be offered in his stead. Animals, again, certainly have figured largely as substitutes for human victims.

To the Jewish notion, Jehovah in his mercy permits the soul of the animal sacrificed to take the place of that of the murderer. No traces remain of this ceremony, which took place; the blood of the latter is cast, and remains so, as is evident from the fact that this blood is put upon the altar; it is a token of mercy on Jehovah's part, that he accepts it. Nor can it be asserted that the animal sacrificed and the murderer were ever remiss in the transgressor.

Effigies, lastly, may take the place even of bread and fruits of the earth as substitutes for the human victim. In Malaysia, dough models of human beings, actually called 'the substitutes,' are offered to the spirits. Such substitutes occur in all parts of the world, and in the majority of its organised religions.

HUMAN SACRIFICE (Chinese).—Unlike many nations of ancient or even modern times, such as the Aztecs, or Dahunams, the Chinese have had no regular system of human sacrifices, offered to the gods, and forming a part of their idolatrous worship. Their altars have never reeked with the blood of the brute creation, much less with that of their fellow-man. We have no record of holocausts of victims being offered up at the shrines of their deities. Flesh is no doubt offered in the rise of worship, but the animal or fowl is already slaughtered and dressed before being brought to the altar, and is offered as food might be to a man—it partakes of the character of an obligation, instead of that of a sacrifice. The type of deities, i.e. of deified human beings, is more that of mild or benevolent gods or goddesses. There is no equivalent of the Indian Kali; there is nothing like the ponderous car of Jaganath leaving mangled remains of crushed humanity in its course. The ferocity of the Chinese gods is developed in the destruction of the destruction of demons; they do not thirst for human blood and do not require to be appeased by the offering of it.

Notwithstanding all this, there are indications to be found in Chinese history of a feeling in the Chinese mind that High Heaven may be propitiated by the shedding of human blood; for several instances occur of human sacrifices being suggested at least. One of the most noteworthy was in the time of T'ang (766-755 B.C.), the founder of the Sung dynasty. We are told by the great historian Set ma Chi'en and by others that, in the land of Egypt in the time of Joseph, seven years of drought prevailed in the Empire, leading to a terrible famine. To such extremities did matters come that it was suggested that a human victim should be offered as a sacrifice to appease Heaven and bring down the showers of much-needed rain. The Emperor T'ang said: 'If a man must be a victim, I will be,' and prepared himself for the sacrifice. Ere the prayer he was offered was finished, the rain fell in heavy showers on the parched land for hundreds of miles.

The Scythian custom of slaying the wives and attendants of deceased chieftains and others high in rank or social position was in vogue in ancient China. A time-honoured custom of burning the dead and their goods—gold, silver, precious stones, silks and embroideries, etc.—with the deceased lasted long. Wives, concubines, and slaves were also looked upon as the property of their lords and masters, and shared the same fate as the other possessions thus interred; for, with the anthropological conceptions of the Chinese with regard to a future state of existence, the life beyond the grave was supposed to be almost a counterpart of this life; and, since such necessary and permanent for the happiness and comfort of the living, it was thought that they were equally necessary for the dead, and that those who had passed into another state of existence could be of service to the survivors and harbour resentment unless freely supplied with them. The drain upon the resources of the people, owing to the enormous expenses entailed by the grand funerals, was such that a gradual process ensued of substituting less costly articles for the rich wares and precious things, so that articles of no real value took the place of the original offerings in most cases; and, in the same way, the substituting of imitation men and women has replaced the imolation of human beings as the obsequies of the great and wealthy.

HUMAN SACRIFICE (Chinese).—Unlike many nations of ancient or even modern times, such as the Aztecs, or Dahunams, the Chinese have had no regular system of human sacrifices, offered to the gods, and forming a part of their idolatrous worship. The drain upon the resources of the people, owing to the enormous expenses entailed by the grand funerals, was such that a gradual process ensued of substituting less costly articles for the rich wares and precious things, so that articles of no real value took the place of the original offerings in most cases; and, in the same way, the substituting of imitation men and women has replaced the imolation of human beings as the obsequies of the great and wealthy.
human sacrifice (Chinese) them. These had springs which caused them to move, probably in imitation of the movements of men. Confucius was the first to practice the custom of burying living persons with the dead. Confucius sacrificed to the invention of the wooden images; but it is more probable that the human sacrifice to the dead was the original form. The wood and the straw and wooden images were substituted for the more cruel custom, as was the case in Japan, where clay images were substituted about the time of the Christian era for the human victims.

Images are now made of a bamboo framework and covered with colored paper to represent human beings, clothed in accordance with the station in life of those they are supposed to represent. These are carried, as in the case of the late Empress Dowager, in the funeral procession and burned. It is believed that they are thus transmitted to the spirit world and there wait upon their supposed lords and masters.

This practice of sacrificing living human beings to the spirits of the departed who occupied high positions when alive was common, as may be gathered from the occasional references to it in Chinese literature. The silence concerning it has also been considered as corroborative of the practice; for, being common, it is supposed that reference was made to it only under exceptional circumstances. Confucius appears to have been insidious among the Chinese and not imported from Tatar sources, as Boiot and even some Chinese have thought to be the case.

The Chinese Herodotus, Shih-na Ch'ien, mentions the first instance we have on record, when a ruler, Wu, of the Yen State made 66 people 'follow the dead' (Duke Ch'ing) into the next world. A nephew (Duke Mu) of this prince had sacrificed to his death. Among these were three brothers put into the grave with the coffin of the Duke. Their fate is depicted in the songs of the State included in the ancient Chinese Classic, the Shi King, or 'Book of Poetry.' This was in 620 B.C.

Hundreds perished at the royal funerals, and scores at those of officers and nobles, in antiquity. The philosopher Mencius, who lived about the 3rd cent. B.C., inveighed against extravagant funerals, informs us of this. At the death of the Great Ts’ao, Hwang, the builder of the Great Wall and the destroyer of the books, all the women in his harem who had borne him no sons were shut up in his tomb (309 B.C.). There is some reason for believing that human sacrifices occurred at the construction of the Great Wall.

In the Ch’aus, or ‘Spring and Autumn Annals,’ of Confucius and in the two Commentaries on them, the Tso Chuan and Ku Liang, mention is made of some cases. Two instances were in 639 and 526 B.C. in neither case was it at funeral rites that the immolation took place. In the first the Viscount of Tsang was sacrificed instead of an animal by the people of Chu, to save some wild birds in the east. The Minister of War inveighed against this sacrifice of a man, a ruler of a State, to an unlicensed and irregular spirit. In the second case the heir of the State of Ts’ao, after the destruction of that State, was carried by the victors to their own State of Ts’ao and sacrificed on a mountain—one would suppose as a thank-offering for the victory gained—again instead of an animal.

In the T’ang, Confucius is said to have sacrificed to save a son buried two daughters with the sovereign. Another, a servant, dreamed that he carried his ruler up to heaven and later in the day he lifted the dead body of this same ruler out of a privy and was buried with him (580 B.C.). Again, in 502 B.C. we read of five men being buried alive at the death of a ferdal ruler of the State of Ch’u. It is stated in the ‘Annals of Wu’ and Yushu that a crowd of men were, by a trick, pressed alive into the mausoleum of a princess in 510 B.C. In a number of cases these entombments were approved of by the people.

In another of the Chinese Classics, the Li Ki, or ‘Book of Rites,’ accounts are given of two proposals to bury the living with the dead. In one case the widow and steward of the deceased, a grandee of the State of Ts’ai, proposed that, to provide for the dead man when ill in the next world, some person should be sent to minister to him. His younger brother, who was a disciple of Confucius, said that it was not proper to do so, but suggested that a man should be done, the widow and steward should be the persons to be sent. This pronouncement settled the matter, and no one was sacrificed. It is supposed that the child of a son who was refused a grave buried his grave with him in the same coffin. There is a similar case where directions were given by a dying man that a favourite concubine should be buried with him. His son decreed that she should be married again. The son obeyed the better order. A Queen Dowager, who loved a minister, commanded that he should be buried with her; but, being reasoned with, yielded to persuasion and gave up the idea (309 B.C.). The Prince of Wu (514–496 B.C.) sacrificed a large number of men and women at the death of a favourite daughter in order that they might accompany her. In the Han dynasty (206 B.C.–A.D. 220), certain tombs of princes of the Wu State (324–228 B.C.) were opened. All a hundred dead bodies were found—all women with one exception—probably intended for the deceased's harem in the spirit world. In another grave two bodies were found. To come later down in history, we find that this practice was specially maintained by the Tatar Liao dynasty which ruled over Northern China (A.D. 907–1125). It will thus be seen that throughout Chinese history there are indications of the prevalence of this custom.

It may be supposed that the first Emperor of the After Chow dynasty (A.D. 901–960) gave orders for a simple funeral for himself, and on no account was any one to be injured in connection with it.

We find notices also of sacrifices to the spirits of Nature, as, for instance, in A.D. 1130–31 at the siege of a city in the North of China when the Khan invaders tore out the hearts of twelve prisoners and offered them as sacrifices for a change of
HUMAN SACRIFICE (Greek) 547

wind; or, again, we read of a maiden being sacrificed to a river-god.1

In the Yuan dynasty (A.D. 1280-1367), women were buried with the Mongols who ruled the empire then.2 In the Ming dynasty (A.D. 1368-1644) the custom was extensively practised during the first hundred years, the first, third, fourth, and fifth emperors being buried in this way with 38, 18, 4, and 7 victims respectively. It was also the rule in the case of princes. This went on until the Emperor Ying Teung (+ A.D. 1464) abolished it for his own funeral, though he sacrificed several women at his brother’s death.3

The late Manchu dynasty (A.D. 1644-1911) at first also practised human sacrifices, as small events during the reign of the first Emperor Shun Chi (A.D. 1644-91).

There is no evidence to show whether the later sovereigns sanctioned it.

It has been thought that the Chinese practice of placing figures of men in an avenue leading to the tomb, as at the Imperial tombs, had its origin in human sacrifices.4 Isolated cases occur in which the Chinese offer to the men of a man killed or murdered the killer or the murderer or a portion of his body.5 Human sacrifices are said to have been burnt in the time of Shih Kung and of silk-fabrication at Soochow.6 It also was and may still be the custom for new rich men in the province to be consecrated with the shedding of the blood of a youth and a maiden at the pontifice of the Tao Te Ching.7 It is supposed to prevent accidents or evil influences. One of the aboriginal tribes in Chinas would offer one of their number every year as a sacrifice to their dog-idol.8

Closely akin to the sacrifices of the living to the dead is a species of sati sometimes practised in China, when the widow publicly commits suicide to follow her dead husband to the grave.

Even in recent times, prisoners or slaves have been burnt under bridges, city-gates, and public buildings.9 These human sacrifices are said to be of great antiquity, and to have been celebrated at the time of the Yin dynasty.10

The rites were, of course, based upon the belief that the dead continues in the world of spirits to follow the same course of living as they have followed on earth; but, though the belief itself prevailed extensively the sacrifice of human victims was always kept up.

In the Homeric age, the proceeding of Achilles was such as to provoke from the poet the unusual comment, “evil was the deed that he contrived.” Some critics have laid it down that the Homeric religion was succeeded by a period of polytheistic superstition, in which aural offerings first became customary. Although there is some measure of truth in this view, it is equally possible to observe that, so far as human sacrifices are concerned, the Homeric poets stand upon the same level as the rest of Greek literature, which is representative of an advanced stage of ethical development, and consequently condemns as unworthy of Hellenic enlightenment the offering up of human lives to appease the wrath of an offended deity. The sacrifice of human victims on stated occasions is regarded as a barbarian practice (Soph. fr. 122), evidenced by the cruel exposure of Andromeda and Helen, those of the Greek heroes, and the savage rites of the Tartar priesthood (Eur. Iph. Taur. 465). The Phoenician Moloch, who was honoured by the sacrifice of children (Plut. de Sacr. v. 466), was regularly identified with Cronus, whose primitive tyranny was overthrown by the milder dominion of Zeus (M. Mayer, in Bonn. Jahrb. ii. 1361 f.). Another Moloch (Ag. 156) calls the sacrifice of Iphigenia lamentable; Pausania (viii. 19. 8) records that the Delphic oracle referred to the recurring sacrifices of a youth and a maiden at the time of Helen, who had been to Tricia and to Aulis on a foreign expedition.

J. DYER BALL.

HUMAN SACRIFICE (Greek).—It has often been observed that the Homeric poems contain hardly any allusions to human sacrifice. A remarkable exception occurs in II. xxiii. 175, where, after sacrificing four horses and two dogs on the funeral pyre of Patroclus, Achilles crowns the onions of the Trojan horses, doubtless to serve as the thralls of Patroclus in the world below, just as the horses and dogs were required to minister to other needs. The sacrifice in question is one of a class which is often represented in early civilizations (Tylor, PC i. 456 f.), and is best illustrated by the account in Herodotus (iv. 71) of the funeral of the Scythian kings, when cooks, groomers, butlers, and others of the royal household were strangled and buried in their master’s tomb. The rite was, of course, based upon the belief that the dead continues in the world of spirits to follow the same course of living as they have followed on earth; but, though the belief itself prevailed extensively to the ancient Greeks, the custom has been kept up, and the practice has been extended to the present day. Recent investigations support the conclusion that no single form is adequate to cover the various circumstances in which recourse was had to human sacrifice. Thus, the rites connected with the peregrination of evil, where the victim assumes the character of a scapegoat, have been traced to a single source; and it must be recognized that in many cases it is impossible to discover precisely how the worshippers believed that their offering would be gratifying. Yet the desire to appease an enraged deity or to prevent his jealousy by timely precautions, when there may be a risk of infringing his prerogatives, is frequently indicated as an impelling motive.

It might happen that the wrath of heaven was declared by some special manifestation of displeasure, such as the occurrence of a pestilence, or the interposition of some unusual obstacle to the successful issue of an undertaking. Thus the sacrifice of Iphigenia was demanded because the detention of the Greek fleet at Aulis by contrary winds was a sign of divine anger (Esch. Ag. 198 f.). Similarly, the sacrifice of Polyxena on the tomb of Achilles was urged by Neoptolemus as a means of obtaining favourable winds for the return from Troy (Eur. Hec. 538 f.). Both of these incidents belonged to the tradition of the

The development story shows a consolidation of two practices: the duty of offering a preliminary sacrifice to a god (see art.
Epile Cycle, the sacrifice of Iphigeneia being related in the Cypris, and that of Polyxena in the Ilium.

... con

vinces us that these and similar legends are handed down from time immemorial, and testify to the primitive beliefs of the race. An echo of the legend of Aulis, possibly combined with an attempt to ascribe an Oriental character to the practice, is preserved in the story recorded by Herodotus (ii. 119), that Menelaus, when detained in Egypt by adverse weather-conditions, sacrificed two Egyptian boys as expiatory victims. Yet another incident may be found in the story of Sima (Verg. Aen. ii. 116 ff.), and an example taken from historical times shows how deeply-rooted was the superstition which required extraordinary sacrifices before a departure on an important voyage. Ageïsana, about to embark at Aulis on his expedition against Persia, dreamed that a human sacrifice was required from him; but, since such an act would have been abhorrent to the spirit of the times, he was content to offer up a rind in Ragonemnon’s sacrifice (Plat. Apol. 6). When the subjects of Athis, distressed by a drought, the king received information that an oracle required him to sacrifice his children Phrixus and Hele; and he was about to comply with this command when the children were miraculously rescued by their immortal mother Nephele, and dispatched on their famous journey over the sea on the back of the ram with the golden fleece (Apollod. i. 16). When attacked by famine and pestilence, the Athenians, in obedience to the command of an old oracle, slew the daughters of Telephus on the tomb of Heracles the Cypelle (Hdt. iii. 5. 8).

Usually, however, the danger which calls for so exceptional a remedy is an approaching conflict with a foreign power. In this instance of Penylla’s expedition (404 ff.), Demophon, preparing to resist an Argive invasion, after he had refused to surrender the children of Heracles, was warned by the soothsayers that it was essential for him to sacrifice to Persephone a maiden of noble birth. Similarly, when Threos was besieged by the army of Acrasides and Polybeus, Tiresias demanded of Creon that he should sacrifice his son Menoeceus in order to placate the hostility of Areus, which Cadmus had incurred by slaying the dragon (Eur. Phæ. 98 ff.) and whose waves are taken from the legendary history of Athens. Erechtheus, when at war with Eleusis, was promised success, if he would offer up one of his own children (Plut. Peric. vii. 4). A similar story was related concerning the three daughters of Lecus (Ellian, Var. Hist. xii. 28), and the devotion of King Codrus saved Athens when he learnt that his death was a necessary condition of the defeat of the Macedonian invaders (Lycurg. 84 ff.).

The general impression which we receive from Greek literature is that in historical times human sacrifice was obsolete, and it comes as a surprise to read in Plutarch that Themistocles, before the battle of Salamis, was driven by the pressure of public opinion to consent to the sacrifice of three Persian captives in honour of Dionysus Oments (Plat. Themist. 13). Grote, it is true, dismisses the story as a fiction (iv. 473), and it is obviously of such a kind as a later age might have invented by way of scandalous embellishment for a famous chapter in the annals of the past. But, whether it is credible or not, we are at least entitled to draw from it the inference that there were not wanting in the classical age those who still cherished a belief in the efficacy of human sacrifice, and were prepared to advocate a resort to it in seasons of supreme danger. The conclusion is in agreement with the other available evidence. Before the battle of Salamis, the oracles were said to have warned by a spirit in a vision to sacrifice a fair-haired maiden, if he wished for victory in the approaching conflict (Plut. Sal. 21). A sense of contemptuous amazement was born in the minds of the friends of enlightenment and those who would have him obey the warning. But a fortunate accident released the general from his dilemma; for a quick-witted seer, casting sight of a chestnut filly, which had separated from the herd and charged into the ranks of the army, cried out that here was the very victim which the infernal powers required. Equally characteristic is the account given by Pausanias (iv. 9. 3-10) of a similar incident in the First Macedonian War, which makes it clear that even at that early date Greek sentiment, while fearing to disobey the express injunction of an oracle, was only too ready to take advantage of any pretext for declaring that the sacred command had been fulfilled.

But there is incontrovertible evidence that, under stress of calamity, religious fears were too strong to be held entirely in check by the growing hatred of superstitious barbarities. Thus we read that, in the course of his famous purification of Athens, Epaminondas the Cretan caused one or two youth to be sacrificed (Athens. 608 C ; Diog. Laert. i. 110). Moreover, several authorities state (e.g. schol. Aristoph. Eq. 1130) that certain outcasts were massacred as a means of appeasing the gods, on the occasion of an extraordinary calamity, in order that, if a plague or a famine attacked the city, some of them might be sacrificed as scapegoats (οἰκονόμα, φαρμακαί). Without the consent of the people, the pollution might be removed. Nor was the practice confined to occasions of extraordinary calamity, for there are other examples, which establish that in certain cases human victims were sacrificed annually or at regular intervals. It has been inferred with reason from a statement of Pausanias (viii. 13. 7) that a rite of this kind was celebrated in honour of Zeus Lykeios on the summit of Mt. Lykeios in Arcadis as late as the 2nd cent. A.D. (cf. Forpbyr. de Aēsīs. ii. 27) (Plat. Meno, 216 C). At Halos in Themessal, Xeres informed that the eldest son of the royal stock, which traced its origin to Athis, was under a taboo to keep away from the town-hall, or, if he was once there, his name was taken from the legendary history of Athens. Erechtheus, when at war with Eleusis, was promised success, if he would offer up one of his own children (Plut. Peric. vii. 4). A similar story was related concerning the three daughters of Lecus (Ellian, Var. Hist. xii. 28), and the devotion of King Codrus saved Athens when he learnt that his death was a necessary condition of the defeat of the Macedonian invaders (Lycurg. 84 ff.).

HUMAN SACRIFICE (Indian).

In this article the expression 'human sacrifice' is used to include not only propitiatory offerings to a god, but also all cases of the immolation of human beings, whether voluntary or otherwise, in furtherance of religious or supernatural purposes.

1. References to the subject in Hindu religious books.—The Astārṇya Brāhmaṇa to the Rigveda describes (vii. 13-15) how a certain king rejoiced that he would sacrifice his first-born to the water-god Varuṇa, if that deity would bless him with a son. One was born in due course, but the king hesitated to fulfill his vow until he saw that the child had grown up, when he ran away from home to escape the fate in store for him. The king was afflicted with drowsiness as a punishment for not sacrificing him. At last a Brahmin was sent on a mission to send the boy to a Brahmin as a sacrifice. This youth was tied to a stake, and was on the point of being immolated when his car, Varuṇa, was appeased by the pious acts of his son, wherein some other deities intervened, and he was released.

It has been argued, as the victim escaped, this story does not prove that the custom of human sacrifice existed, as it is supposed to be actual, and that the rite was merely symbolical. But the whole story loses its point unless a real sacrifice had been intended. It is, moreover, in accordance with a custom which was put up to by the British Government only a century ago in Bengal, where Hindu women were in the habit of consigning their first-born babes to the Ganges in fulfilment of similar vows.

The above story is an instance of the sacrifice of children in the fulfilment of vows. Another form of human sacrifice was the puruṣapāka, which was celebrated for the attainment of supremacy over all created beings, and at which eleven human beings and eleven barren cows were offered up. The ceremony is described in the White Yajur Veda, of which the Vajasaneya Samhita opens with verses intended to serve as mantras (charms or incantations) for offering of human sacrifices. Various gods are enumerated, with the kind of victim suitable for each, such as a priest for Brahma, a musician for the divinity of music, and a fisherman for the god of rivers. Other details are contained in the Taittirīya (iii. 4) and Śatapatha Brāhmaṇa (xiii. 2), as well as in the Sādākhyaṇa (xvi. 10-16) and Vāstu śrauta Sūtras (xxvii. 1).

In the Śatapatha Brāhmaṇa it is stated that the victims are to be let loose after being consecrated; but this work is of much later date. The earlier records conclusively point to the actual slaughter of the victims; and the account of the rite given in the Śatapatha Brāhmaṇa itself can be explained on the hypothesis that it was a modification of a prior rite in which human beings were immolated.

The adiśeṣa, or horse-sacrifice, for the attainment of wealth, also required the immolation of a human being (Śatapatha Brāhmaṇa, xiii. 3, 6, etc.; see Eggeling, SBE xiv. p. 221); and human sacrifice, though reprobated, is mentioned in the Mahābhārata (e.g., ii. 629 ff., 861 ff.).

The Purāṇas and Tantras, which were compiled in very early medieval times, contain many allusions to the immolation of human sacrifices. This was the naravatai, or human sacrifice to the goddess Chandikā, a dark, fierce, sanguinary divinity, who is represented in the most awful forms, garlanded with a string of

These passages are quoted at length by R. H. Jackson in his paper 'Human Sacrifice in Ancient India,' JASBS xiv. (1929) pt. i. p. 76.
human skulls, besmeared with human blood, and holding a skull in one hand and an up enot on the other.

In the Kalidā Purāṇa it is said that 'by a human sacrifice attended by the rises laid down, Dvīta the goddess, Līka' (Chandikā) of men, was gratified for a thousand years; and by the sacrifice of three men, one hundred thousand years. Thus the goddess Kāmākhyā's consort Bhrāvatra, who assumed my shape, remained pleased three thousand years. Blood consecrated immediately becomes ambrosial, and when the flesh and blood are gratifying, therefore should the head and flesh be offered as the worship of the goddess. The worship should add the flesh free from hair, among food offerings. Minute details are added regarding the in which the times, when, and the places where, the rites should be celebrated.

Having placed the victim before the goddess, the worshipper should adore her by offering flowers, sandal paste, and betel, formerly common. They were offered in the manner appropriate for sacrifices. Then, facing the north and placing the victim to face east, he should bow and repeat the prayer: 'O man, through my good fortune thou hast appeared as a victim; therefore I white thee; thou multiform and of the form of a victim. Through, by granting Chandikā, destroyest all evil incidents to the giver. Thou, a victim, who appeared as a sacrifice meet for the Vaipavā, bestow my salvation. Victims were created by the self-born himself for sacrificial rites: I shall slay thee, and death and sacrifice as a sacrifice is no murder.' Thus meditating on that human-formed victim, a flower should be thrown on the top of its head with the mantra: 'Om, Ahi, Brīhi, Bhīti; 'The thought of one's own wishes, and referring it to the victim should be sprinkled with the victim. Thereafter the sword should be consecrated with the mantra: 'O sword, thou art the tongue of Chandikā and bestower of the riches of the world. Slay and slaying the victim, thou art the last dreadful night of creation; born fierce, of bloody eyes and bounding with a bloody head; I salute thee.' Thus, having thus been consecrated, should be taken up while chanting the mantra: 'Ahi, purī, ahi, purī, the excellent victim sacrificed with it. Thereafter, carefully sprinkling on the blood of the victim, water, cool, sweet, honey, and sweetened flowers, and should be placed before the god, and the skull also, with a lamp burning over it, should be placed before her with the mantra: 'Om, Ahi, Brīhi, Bhīti, varākalya, and bespeaking thou art gratified with the blood.' Thus, having completed this, the worshipper attains the reward.

In the fifth act of the Mahābhārata, by the dramatist Bhāraviān, this is a vivid description of the attempts of an Archer (p. 390) to sacrifice the heroine to Chānudāma, a form of Kāli.

2. Former prevalence of sacrifices to Kāli.—These tīrthā sacrifices to Kāli or Chandikā were formerly common. They were freely offered in the days of Mahārāja rule; and in Western India there are many temples at which such sacrifices were common only a century ago. The victims were taken to the temple in the evening and sent up; and in the morning he was found dead, the dead goddess having shown her power by coming in the night and snatching his blood.

The great Śivas temple at Tānjore contains a shrine of Kāli where a human victim (a male child purchased for the purpose) was sacrificed every Thursday evening, until the advent of British rule led to the substitution of a sheep. There are other temples in Southern India where similar sacrifices were formerly common. At the famous shrine of Dāntēśvara in Bantār it is said that in A.D. 1830 upwards of twenty-five men were immolated by the Rājā on a single occasion. Simla, writing in his "History of India," says: a certain chief in the Central Provinces once a year sacrificed a Brāhma to the goddess. The Brāhmans of the Deccan used to sacrifice an old woman on the occasion of the Rājā of Bīrār's annual visit to the fort of Pātañjali. According to Sir John Malcolm, the Karāḷ Brāhmans annually sacrificed a young Brāhma at Bīrār. This class of Brāhmans long remained under the suspicion of being addicted to human sacrifices, using poison to effect their ends when an open sacrifice would have been too dangerous. In the "Medical Jurisprudence," written in 1854, it is said that there are in the villages under the subject was published by the Ascanians in the "Ariadne Research," 1774, 775 E. B. The Roman Law and Society in the "Lond., Lond., 1850, II, 321.

HUMAN SACRIFICE (Indian) 851

buffaloes and goats—but some families, whose
ancestors offered human victims at the Durya and
Kali Puja, now sacrifice, in lieu of a living man,
a buffalo, about a foot long, made of dried milk
(khadi).

3. Sacrifices by aboriginal tribes in north-east
of India.—The gods whose favour it was desired
to obtain, were usually the ordinary gods, like
the Yoros, the gods of the plains, or the gods on
which many of the marriage ceremonies were
performed. The sacrifice was performed on the
verandah of the home, or in a clearing in the
forest. The victim was usually a male, aged 15
or 16, and was selected from the village. The
victim was usually a member of the clan. As in
other cases, persons who were deformed, or bare
any scar or blemish, were regarded as unfit to
be victims.

The offering of human sacrifices to Kesti Khati
was common also in Nowgong, where the victim
was usually some stranger who had come for
purposes of trade. He was killed in close custody
for about a fortnight, and was then led out, decked
with flowers and jewels, and decapitated. As
soon as this had been done, the spectators filed headlong
down the hill on which the shrine stood, to avoid
being devoured by the hungry gods and goddesses.

The sacrifice seems here to have been offered, not
in order to obtain some imaginary benefit for the
worshippers, but rather with a view to providing
food for the sanguinary goddess and so escaping her
unwelcome attentions themselves.

The same idea of gods requiring human blood is
found among the Khasis, who believe in the
existence of snake-gods called thlen. When a thlen
takes up its abode in a family, there is no means
for getting rid of it. So long as it is supplied at
intervals with its favourite food, the family prospers
and grows rich; but, when it feels the want of
blood, sickness breaks out and misfortune become
frequent. Some human being is then murdered,
and the hair, the tips of the fingers, and a little
blood from the nostrils are taken and offered to the
thlen. The belief is that the demon appears in
the form of a snake and devours the body of the victim,
which is materialized from the portions thus
offered. Murders due to the prevalence of this
superstition still occasionally occur.

This idea of a family-spirit that needs human blood and
affects the family with misfortune if its craving is not satis
tified exists also in other parts of India, and is believed to be
the cause of a murder committed in the year 1906 in Chota
Nagpur. The victim, a boy of 15, was found lying in his
throne out, and some grains of uncooked rice were seen in the
wound, showing that he, like animals destined for sacrifice, had
been made to swallow rice immediately before he was killed.
The murder had apparently been committed at a shrine of Kali,
where the body was found. If so, the case may illustrate a
stage between the entirely non-Aryan practices of the Khasis
and the rites laid down in the Edittas Parthas.

4. Sacrifices by Dravidian tribes.—Human
sacrifices were once very common among the
Dravidian tribes of the Chota Nagpur plateau.

With the Rhomu they were so frequent and
notorious in the early days of British rule that
officers were deputed by Government to investigate
the facts with a view to preventive action, and we
have in their reports a full account of the practices
so obtained among the members of this tribe.

Ruman offerings were made to them by Tari
Penu, the earth-goddess, to avert misfortune and
disease, to obtain success in war, and especially
to ensure good crops. The victim, or mordah, was
acceptable to the goddess only if he had been
purchased (usually from the Thane, a weaver and
criminal tribe, who procured children for the
purpose from the plains), or was the son of a victim,
or had been dedicated as a child by his father.

Rhumu in distress sometimes told his children
for victims, ‘considering the beatification of their
souls certain, and their death, for the beatification
of mankind, the most honourable possible.’

The victims were often kept for some time before
being sacrificed. They were regarded as consecrated
beings, and were treated with extreme affection
and deference. They were commonly sacrificed
about the time when the chief crop was sown. On
the day before the ceremony, the victim was dressed in a new garment and led with music and dancing to the sacred grove, where he was tied to a post, anointed with pitch, turmeric, and water, and adorned with flowers. "A species of reverence which it is not easy to distinguish from adoration" was observed throughout the day. The crowd danced round the post to music, and, addressing the earth, said: "O goddess, we offer this sacrifice to you; give us good crops, seasons, and health." The orgies were kept up till noon next day, when the victim was again anointed and taken in procession round the village. On this occasion, as on the previous day, there was a great struggle to get some relic from his person, such as a lock of his hair, a particle of the turmeric paste, or a drop of his spittle. He was then usually strangled in the clef of a great caracal, or a wooden elephant which was made to revolve. The officiating priest (a Khond) first wounded the victim slightly with an axe, and the crowd then tore him to pieces, and the flesh was carried off to different villages, where part was offered to the earth-goddess, buried, and a libation of water was poured over it, and the rest was divided among the householders. Each man buried his piece in his favourite field. The remains (head, bowels, and bones) were burned next day, with a sheep, on a funeral pyre. The ashes were scattered over the fields, laid as paste on the houses and granaries, or mixed with the new corn to preserve it from insects.

Our authorities represent the sacrifice as victims offered to propitiate the earth-goddess; but Fraser points out that the flesh and ashes of the victim were actually thought to be a divine or intrinsic power of making the crops to grow, quite independent of the indirect efficacy which it [the sacrifice] might have as an offering to secure the good-will of the deity.1

Practices very similar to those of the Khonds have been noticed by Davis and Needham among various Mongolid tribes in the Naga Hills and on the Plateau. Sometimes the flesh is buried in the fields to ensure good crops, and sometimes the victim is tied up and burnt to death in the jungle which is to be cleared for the next year's crops. The same tribes also regard a human sacrifice as very efficacious in warding off disease or ensuring victory in battle. The victim may be a slave, a prisoner of war, or some other person chosen for the purpose. Both sexes are equally suitable. In the North of the Upper Chindwin district in Burma it was formerly the custom to sacrifice boys and girls at a big festival in August in order to get good rice crops. The victims, who were usually small children, were chosen from the unadministered territory. A rope having been placed round his neck, the victim was taken to the outskirts of the village, and the relatives of the purchaser. At each house a finger joint was cut off, and all persons in the house were smeared with the blood. They also licked the joint and rubbed it on the cooking tripod. The victim was then tied to a post, and the head of the village and killed by repeated stones of a spear, the blood from each stab being caught in a hollow bamboo, to be used afterwards for smearing on the bodies of the purchaser's relatives. The entrails were then taken out and the flesh removed from the bones, and the whole was put in a basket and set on a platform near by as an offering to the god. After the blood had been smeared on the purchaser and his relatives, who danced and went meanwhile, the basket and its contents were thrown into the jungle.

Among other Dravidian tribes who immolated human beings may be mentioned the Bhumi, who kidnapped children and sacrificed them at the shrine of their goddess Rakeshi. The Bhuiyas had a goddess named Thakurani Mai, to whom similar sacrifices were offered; in 1869 an omnious official was slain by them, and his head offered to this deity. During the rising of the Munda in 1860 a constable was killed, and it is said that his head was cut off, and his brains offered as a sacrifice to the local demons. The Bhogas of Bhanurphur formerly offered up a human being, at stated intervals, to the bees which infest the rocks there, and to which supernatural powers are attributed. To this day the local aborigines will not pass the palace of a certain Raja at night, owing to the survival of the terror that travellers are liable to be caught for sacrifice. The Banjaras, or pack bullock drivers, were once much addicted to human sacrifice, and were said to have learnt to bury a child in the ground up to the shoulders, and then drive their bullocks over it. Sometimes, in order to cure an illness or obtain some desired end, they would arrange a vicissity in one stroke of a sword and sprinkled its blood over an idol.

5. Head-hunting.—Like the Dayaks of Borneo, the Gikos and many tribes of Nagas were formerly head-hunters; and they often made raids on each other solely in order to obtain heads, which were brought home in triumph to the village and hung up on a totem pole. Among the Wams in Nagaland a man was not allowed to put on the full insignia of a warrior until he had taken a life. It was not necessary for the victim to be a man killed in battle; a child or an old woman speared from an ambush served the purpose equally well. The practice has been put down in British territory, but it is still in vogue among the independent tribes, and there is little doubt that the belief that persons whose heads are taken become slaves of the captor in his future life.

The heads of the victims were offered to heads of enemies killed in or after a battle, or buried them under the steps of their king's palace. But in their case no religious motives appear to have been connected with them; it was merely a barbarous method of exulting over their defeated enemies.

6. Sacrifices to earth- and river-demons, etc.—There is a superstition current throughout India (and perhaps also among other countries) that the demons of the earth, and that it is most hazardous to search for or remove it unless the demons have first been mollified with blood. In Southern India human sacrifices are deemed most suitable for this purpose, and the demons are believed to have a special partiality for the blood of a pregnant woman, but nowadays they can be satisfied with that of a buffalo, a goat, or even a fowl. Rivers also are often thought to be inhabited by demons. It is commonly believed that a bridge over a big or fast-flowing river of not stand until the river spirit has been appeased by the offering of human blood. Captain Clive, writing in 1780, says that the Tana of Mawar, before crossing the Mahi river, invariably caused an individual from a particular tribe to be sacrificed, his throat being cut and his body thrown into the river. There is a wide-spread superstition that large buildings require the burial of human beings in the foundations to make them safe. When important public works are in progress, rumours are still frequently spread and widely believed that lives are needed for this purpose, and that persons found wandering abroad at night are in danger of being taken as victims. A few years ago a girl was killed under the orders of a local landholder, and buried under an embankment which had given way several times, in order to render it immune from further injury by gods or demons. About the year 1782, when the gates of the city of Tavoy in Burma were erected, a criminal was put into each post-hole, and the post was thrust down upon him, so that he was crushed at the sides. He was supposed to become a spirit that would hover about the place, inflicting evil on all who came near, thereby contributing to the defence of the town.

There is a very general belief in the efficacy of human blood to produce any desired result. In Sibesagar in 1854 a man decapitated the young son of a neighbour and drank his blood, in order to affect the recovery of his own child, who was ill.
with fever. A similar act was committed in Mianagar in the year 1894, by a woman, who hoped thereby to obtain a son. In the same year, at the instigation of a Hindu conjuror, a Musalman butcher, who had lost his child, killed a neighbour's child, and washed and buried it in order that her future children might be healthy. Three similar cases occurred in 1899, one in the United Provinces and two in the Nask district of Bombay.

Killing the king.—In The Golden Bough it is shown that primitive races in different parts of the world have a practice of killing their king. Among these races the king was regarded, and his subjects were endowed with supernatural powers, and their welfare was dependent on his preserving these powers unimpaired. It was therefore the custom to kill him, or make him commit suicide, so that his soul might be transferred to a vigorous successor before he grew feeble from old age. A custom of this kind once existed in Calicut, where the smeris, or king, was formerly obliged to cut his throat in public at the end of a twelve years' reign. But by the 17th century the rule had been modified. At the end of the twelve years a great feast was given, at which any guest who was not minded at liberty to endeavour to kill the king. If he succeeded, the crown would be his reward; but, as the king was surrounded by his guards, the chances of success were very small.

The old Hindu custom which required the king at his coronation to slay a man was possibly a survival of the same class of ideas which led the Ahsoms to bury their slaves alive in the tombs of their kings and great nobles, and the Khongi Nagas to decapitate a man and inter his head with that of the deceased chief. Certain Central India chiefs used to slay men at their predecessors' obsequies. In the southern kingdom of Vijayanagar royal funerals were the occasion for wholesale holocausts of women.

Religious suicide.—The idea of religious suicide, of sacrificing oneself by no means unknown to the Hindus. We have already seen how, in the north-east of India, people sometimes offered themselves as victims at the shrine of Kâli. This was a practice of the Central Provinces where annually, until 1894, devotees were induced to throw themselves from a height on to some rocks which were thought to be the burial place of Kâli Bhairava, the consort of Kâli Dêvi, who fed on human flesh. Expressions occur in various religious books which countenance the practice of suicide, and rules are laid down for the rite. It was still quite common in the early part of last century. It was resorted to mainly by persons who suffered from great poverty or painful and terminal diseases. The man drowned himself in a sacred river, such as the Ganges, especially at some peculiarly sacred spot, such as a ghat or a sacred island. He would thereby acquire merit that would redound to his advantage in his next birth. The rite used to be performed with much ceremony. The man who was tired of life made the prescribed abjurations and repeated certain mantras, and then sprang from a boat, or waded out of his depth, with earthen vessels tied to his limbs, which dragged him down when they filled with water. It was considered auspicious if a crocodile carried him off before he died from drowning. Another favourite method of ending life by throwing oneself beneath the wheels of the huge car on which the image Jâgannâth at Puri is dragged once a year from the temple in which it is usually kept to a garden house about a mile away. Sick people, if the astrologer has predicted their death, are often taken to die on the banks of a sacred river. In former times, if death was long in coming, they frequently strangled themselves, and, if at the last their resolution failed them, their relatives took care that they did not draw back.

9. Sati.—But the most common and best known form of religious suicide was the practice universally known as sati, of widows who allowed themselves to be burnt to death on the funeral pyres of their husbands. Such suicides were frequent among all the high castes, and were especially common in the families of Rajput chiefs. In many cases the act was entirely voluntary, but sometimes the unfortunate widow was subjected to a good deal of pressure before she could be induced to ascend the pyre. Sati was prohibited by law in British territory in the year 1859; and the example thus set was followed some years later by the rulers of the Native States. Isolated cases, however, still sometimes occur. In the year 1911 a Hindu lady, whose husband was on the point of death, soaked her clothes in kerosene oil and, setting light to them, burnt herself to death. Her act was applauded as that of a devoted wife by many Hindus, even among the educated classes. How this practice came into vogue it is difficult to say. There is no mention of it in the Vedas; but, from the belief that the wife who thus immolated herself accompanied her husband to the other world, it may have arisen from the same class of ideas which led the Ahsoms to bury their slaves alive in the tombs of their kings and great nobles, and the Khongi Nagas to decapitate a man and inter his head with that of the deceased chief. Certain Central India chiefs used to slay men at their predecessors' obsequies. In the southern kingdom of Vijayanagar; royal funerals were the occasion for wholesale holocausts of women.

10. Offering one's own blood.—In conclusion, mention may be made of the practice of offering one's own blood to Kâli. This is referred to in the Kalikâ Purâna as an acceptable way of propitiating the goddess, and it is still common among Hindu women. When a Hindu woman is dangerously ill, a vow is made that, on the recovery of the patient, the goddess will be propitiated with human blood. The vow is fulfilled either at the next Durgâ Puja, or at once in some temple of Kâli. The wife or mother, after performing certain ceremonies, draws a few drops of blood from her breast with a nail-cutter, and offers them to the goddess.

HUMAN SACRIFICE (Iranian).—1. Early Iranians and Avestan people.—The prevalence of the custom of sacrificing human beings to the gods is so fully and incontrovertibly attested among practically all the Indo-European peoples, as it is in the case of most ancient nations, that we are naturally predisposed to look for clear and unmistakable indications of its existence among the Iranians. In point of fact, however, these indications are so few and inconclusive that the practice of human sacrifice has been confidently declared never to have been in vogue among the Persians. Whether the prosecution of earlier records would have exhibited the Iranians in line

1 A New Account of the East Indies, by Captain Alex. H. Mitchell, R.N., Containing a Narrative of a Voyage Round the World, in His Majesty's Ship Pheonix, we are indebted to Pinkerton's Voyage and Travels (London, 1811), vol. ii. p. 112.

2 The Persians were perhaps the only nation in ancient times who did not indulge in human sacrifices. 'On Human Sacrifices in Ancient India,' J.ASBE xiv. (Calcutta, 1870) 68.

3 Several more similar cases have occurred since this article was written.
with the other Indo-European races in this matter is a question (that does not admit of a categorical answer). Schrader, speaking of the Aryans (i.e. Indo-Europeans) generally, says:

'If it is as little likely to be doubted, offerings were made to the gods as to be expected from the nation that has taken a prominent place amongst them.'

Others, with much historical justification, maintain that the general principle can be laid down in regard to the point of time and the order in which human and animal sacrifices occur in the religious development of nations (see art. ANIMALS SACRIFICE, vol. I. p. 496 f.; also art. 'Sacrifice', in E. R., by the same author). Moreover, among the Hindus, the nearest ethnological relations of the Iranians, the prevalence of human sacrifices is in inverse ratio to the antiquity of the period we may be considering.

Of its vogue in the earliest Vedic times we possess only the indications contained in the Svetatman hymns of the Rigveda (I. 26-30), which, in all probability, are to be regarded as pointing to a real and not a merely symbolic sacrifice (see Rajendralal Mitra, op. cit.). The Avesta, on the other hand—even its earliest portions—contains no suggestion of that custom as having been practised at any time. What little bearing on this subject the evidence of the Avesta possesses tends to confirm our previous conclusion that human sacrifices were unknown to the Avestan and pre-Avestan people of Iran.

The most usual victims in the human sacrifices of modern Persia are prisoners of war. But these, we have reason to believe, were treated with great clemency by the Avestan people.

As Geiger says:

'Captives taken in war were kept by their conquerors as servants and slaves. As much as they bestirred themselves to minister in the daily business of the house, the women themselves treated them kindly and humanely. And again, slaves were evidently regarded as members of the family, and their possession very highly valued.'

It should, perhaps, be remembered that the above is a description of the social life of the eastern Iranians in particular, whose practices as well as their customs may have differed somewhat from those of their more westerly kinsmen.

2. The Achemenians and the custom of human sacrifice.—Herodotus and some later writers attribute isolated instances of human sacrifice to at least three of the Achemenian kings. Each of these cases must be considered separately. In the time of Cambyses, when Sardis, the capital of the kingdom of Lydia, fell (in 546 B.C.) into the hands of the Persians, Cyrus, according to the account of Herodotus, issued orders to erect a great pyre and to place Cyrus, the captive king, with fourteen youths, on the pile to be burnt. Later, however, he relented, and a shower of rain extinguished the flames, and thus Cyrus was spared. This version of the story had always presented two great difficulties to its acceptance. The first and more formidable was that of reconciling this incident with Cyrus's otherwise justly enjoyed fame for clemency to his prisoners in war, and no adequate reason seemed to have been present for any departure on this occasion from his usual attitude and practice. Further, there was the less formidable, perhaps, yet real objection that Cyrus, as a Zoroastrian or true Persian, could not have ordered the burning of Cyrus. The light which recent researches have thrown upon Cyrus's religious attitude has tended to some extent to remove the latter difficulty. Nevertheless, the story as told by Herodotus did not easily commend itself to

3. Human sacrifice as practised by the Scythians.—Although all the other branches of the Iranian race, so far as our records show, were singularly free from the habit of sacrificing human beings, the Scythians, who were perhaps only mainly Iranian, practised that custom in very extreme forms. It was their custom to sacrifice one out of every hundred prisoners of war. The method of immolation, according to Herodotus, was as follows:

A large platform made of brushwork was erected, upon the top of which was set a sword or scimitar, the image of Ares. Libations of wine were poured over the victims' heads, after which they were slaughtered over a vessel. Then the blood was taken to the top of the pile and poured upon the scimitar. While this was proceeding at the top of the platform, below, by its sides, the right hands and arms of the slaughtered men were cut off and tossed up into the air, the whole being left to disintegrate and decay where they might chance to have fallen. Another
instance, in which, perhaps, the religious motive is more remote, is the method by which false diviners were immolated. A waggon is loaded with brushwood, and drawn by two pairs of horses. Two men, with their feet tied together, their hands bound behind their backs, and their mouths gagged, are placed on the wood. Finally the wood is ignited and the oxen are made to rush off with their burning load until they themselves are caught in the conflagration and all are consumed together.

The only other instance that need be mentioned here bears more clearly the character of a religious sacrifice, namely, the ceremonies associated with a king's funeral. After the long march of the procession from tribe to tribe, as described by Herodotus, and the arrival at the royal tombs, the body of the dead king, stretched on a matrass, is laid in the grave prepared for it. In the open space around the body of the king they bury one of his concubines, first killing her by strangling, and also his eunuch, his cook, his groom, his lacquey, his messenger, as well as some horses and other possessions. When a year is gone, further ceremonies take place. Fifty of the best of the late king's attendants, the native Scythians—are taken and strangled. Then as many of the king's finest horses are slain. After a somewhat barbarous preparation for their consumption, the strangled youths are mounted upon the slaughtered horses and arranged in a circle around the king's tomb. These are the most important instances of the forms of human sacrifice practised by the Scythians.

LEWIS.—The works dealing most fully and directly with the various parts of our subject have already been indicated. On the Croesus story, see also G. Frazer, Adonis, Attis, Osiris, London, 1897, pp. 141 E., 166 E.; see also p. 602 f. on the tomb of Croesus.

E. EDWARDS.

HUMAN SACRIFICE (Japanese and Korean).

1. Japanese.—The most ancient Japanese documents that have come down to us were written at a time (8th cent.) when the memory of human sacrifices was still green. One of the most important myths of the Ōkuninushi is conceived as follows:

"Having been expelled (from Heaven, after his crimes against the Sun-goddess), Susano-no-otono-mikoto (Ura-Swift-impudent-Male-Augustness, the god of the Ocean and the Storm, who appears here in the aspect of a human hero) descended to a place called Tatsuta on the head-waters of the River Hō in the land of Izumo. At this time some cephalopods came floating down the stream. His divine father, Inugami, thought that there must be people at the head-waters of the river, so went up in pursuit, when he met upon an old man and an old woman,—two of them,—who had a young girl, only seven years old, and were weeping. Then he asked: Who are ye? So the old man replied, saying: 'I am an old lady, daughter of Omiya-ume-no-mikoto (the Great-Mountain-Mountain God). I am called by the name of Amano-tani-chi, my wife is called by the name of Te-nakadachi, and my daughter is called by the name of Inugami [i.e., princess;] she has no doubt for Izuka, a place-name meaning 'water-god,' before the name. Her complexion is white and her hair black, she is very beautiful.' Thus saying he went on his way. Again he asked: "What is the cause of your crying." The old man answered, saying: "I had originally eight young girls as daughters. But the eight-headed serpent of Koshii (a name of the north-west district occupied by the Aman) has come every year and devoured one, and it now time to come, whereas we weep." Then he asked him: ‘What is its form like?’ The old man answered, saying: ‘Its eyes are like candlesafdes [the winter-cherry]; it has one body with eight heads and eight eyes. Moreover, on its body grows moss, and also chamaemelum and cryptomerias. It has length eighteen fingers, eight valley and eight hills, and if one looks at its belly, it is all covered by a fog. Moreover, Ura-Swift-impudent-Male-Augustness said to the old man: ‘If this be the case, I shall make a sacrifice of your daughter; but long may your daughter live!’ "With reverence, but I know thou art Augustness. Then he made a sacrifice of your daughter, making it Great-August, Great-August." So we have now descended from Heaven. Then he asked them, saying: ‘Woe to them, who come to this world, who cause the river to be dyed in blood; that ye, who have arisen in this world, that ye, who have come into this world, who cause the world of men to be dyed in blood!" So he said, that he so, with reverence will we offer her to thee. So Ura-Swift-impudent-Male-Augustness, at once taking and changing the form of your daughter, he seized her, and then he struck into his august hair-brush, said to the Deities Augustness, and immediately dipped a head into each vessel, and drank the liquor. Thereupon he was intoxicated with drinking, and all the heads lay down and slept. Then Ura-Swift-impudent-Male-Augustness drew the two-tined mace from his hand, and put it on him, and cut the serpent in pieces, so that the River Hō changed into a river of blood. So when he cut the middle tail, the edge of his august sword broke. Herein thinking it strange, he thrust into and split the flesh with the point of his august sword and looked; and there was a great sword within. So he took this great sword, and thinking it strange thing, he respectfully informed the Heaven Deities. ‘Is it Great-August-Deity.' This is the Kusaguni-no-ta-chi (Herb-Quelling-Great-August-Sword) (Kōshi, tr. Chamberlain, Real and Traditional Japan, pp. 71-72; cf. Notes on crochet: a translation and note, London, 1832, l. 63-68). This is clearly analogous to the legend of Perseus rescuing Andromeda from her sea-monster, which was about to devour her. It seems to have lost, at the time of its redaction, what was probably its original meaning, and, before becoming a simple epic narrative, to have been meant to allude to the imitations of human sacrifices offered to theriomorphic deities, especially water-spirits conceived in animal form (see E. S. Hartland, LP ii. ch. xviii.; Mallinder, in KHE xxxiv. (1896) 401 f.). The description now of the monster of Koshii, in fact, seems, as already observed by Aston (Asiatic, London, 1900, p. 103), to be really a poetical representation of the Temari, of the Temari itself, with its serpentine course, its numerous tributaries, its wooded banks, and its deep waters, devourers of human beings. Even to-day popular superstition believes in the existence of monsters called kappa which haunt the mouths of rivers by preference, and keep human beings, just as the inhabitants of the thick mountain-forests fear the wakashū (legend of a boy who believes in women and children). It was much more natural for such ideas to be prevalent among the primitive Japanese, who, like so many other nations, perhaps, see Waits - Gerland, Anthropologie der Naturvolker, Leipzig, 1850-71, iii. 198; A. Réville, Religions des peuples non-civilisés, Paris, 1888, 175 f., 225, 247, etc., endow the spirit of the water with serpent form, serpents often having aquatic habits, and attributed to its poisonous breath the deadly influence manifested in certain epidemics. Hence the conception of the mako-ō, 'water-spirit,' i.e., 'water-god,' of which the terrible dragon of Koshii is only a representation enlarged upon by the imagination of myth-makers.

Another story helps to confirm this interpretation by giving us a positive example of these sacrifices to the river-deities. It is telling of an event which happened, according to the Nihon-shoki, in the year A.D. 923:

"In order to prevent the overflowing of the Northern river, the Mamusa embankment was constructed. At this time there were two parts of the construction which gave way and could not be stopped up. Then the Emperor had his head drawn, in which he was admonished by a god, saying: 'There is a man of Mamusa named Kusa-kubi and a man of Koshii named Koromo-no-kubi, the Mamusa. Let these two men be sacrificed to the River-God, and thou wilt surely be enabled to close the gap.' So he sought for these two men, and, having found them, sacrificed them to the River-God. Hereupon Kusa-kubi went and lamented, and plunged into the river, died. So that embankment was completed. Koromo-no-kubi, however, took two whole calves, and, standing over the water which could not be damned, plunged the two calves into the mid-stream and prayed, saying: '0 thou River-God, who hast sent me to remove what is diabolical; be it a sacrifice; be it a sacrifice!" This was not sufficient for the Kusa-kubi. Then shall I know that thou art a true God, and will enter the water of my own accord. But thou canst not sink the calves; I shall, if of course, know that thou art a false God, for whom why should I spend my life in vain? "Nevertheless, he plunged at once into the pool and suddenly which drew with it the calves and tried to submerge them in the water. But the calves, dancing on the waves, would not sink, and floated far away over the wide waters. In this way that embankment was completed, although Koromo-no-kubi did not die. And Kusa-kubi's cleverness saved his life. Therefore the men of that time gave a name to these two places, calling Kusa-kubi's pool 'Kusa-kubi's Gap' and 'Koromo-no-kubi's Gap' (Nihon-shoki, 1. 323 f.)."

1 Herod. iv. 66.
2 iv. 71.
What is the significance of the calabashes employed here? Is it a simple test, cleverly based on the idea that the drinker would surely notice the light floating glands? Or may we have at the same time the idea of the magic virtue attributed to calabashes, which were used in ancient India as an antidote to serpent-bites? (see V. Henry, *Le Magici dans l'Inde ancienne*, Paris, 1904, p. 263; and cf. the willow-tree gourds used as amulets in China (J. J. M. de Groot, *Les Fêtes annuelles à Émon*, Paris, 1887, p. 328 f.)). Whatever may be the answer to those questions, we have in this story a case of human sacrifice, fully accomplished for one of the victims, and escaped by the other only through his personal ingenuity. With this story we may connect the following, given under A.D. 798 by the Nihongi:

"This year, at a fork of the River Kashiwazumi, in the central division of the Province of Kiï, there was a great water-snake which harassed the people. Now when travellers were passing on the river, having entered the water, the snake would give chase. And having found the way into the water, the snake would take the place of the person. The rest of the people, then, would fall into the river. So the water-snake changed itself into a deer, and drew to draw down the hunter and the boat in which the hunter was sailing. The neighboring nobles would not sink. So with upraised sword he entered the water and slew the water-snake. He further sought out the water-snake's lair. Now the tribe of all the water-snakes filled a cave in the bottom of the pool. He slew them one by one, and the water of the river became clear. The next year, therefore, the place was called "The Pool of Aga-mori." (Nihongi, i. 296 f.)"

These two stories, which the Nihongi places right or wrongly, in the 4th cent., but which in any case are of a much later date than the myth of the serpent of Koshi, already display a certain scepticism in regard to the river-gods and the utility of appeasing them by the sacrifice of human life. They establish, nevertheless, the early existence of the custom of whose abolition the legend of the Japanese Persians gives us a symbolism account—a custom probably replaced later by animal sacrifices and finally falling into complete disuse under the influence of Buddhism. A later text, referring to A.D. 642, when there was a great drought, says:

"The Ministers conversed with one another, saying: "In accordance with the teachings of the village howari ["sacrificers," priests of an inferior grade], there have been in some places horses and cattle sacrificed to the Gods of the water of the various streams, in others... prayers to the River-Deity. None of these has brought any advantage. Let us therefore, in the name of Gods, sacrifice a maiden to the Obo-osato, in order to receive no harm from the Elephants.""

The substitution of animal victims for human victims is confirmed by a curious myth in a work of the beginning of the 14th cent., the *Uji-Sekai Monogatari* ('Tales forming a sequel to the Uji Collection,' a similar collection which appeared in the 12th century). Here we find a local survival, in the circuit of San'yodó (on the Inland Sea), of a serpent-god and a monkey-god to whom a maiden was sacrificed every year; then, thanks to the mythical intervention of a noble hero, 'the Knight of Arama,' the suppression of this custom, and the decision made by the priests of the temple that in future they would sacrifice only boars and deer (see the Uji Tales from the Uji Shui Monogatari, in TAJSI xviii. [1900] 41-45). Similar substitutions might be cited among other peoples, from the time of ancient Greece, where the annual immolation of a youth by Dionysus was reported by the sacrifice of a goat at the request of the inhabitants of Potamos (Pausanias, ix. 8, 1), to the 13th cent. when the British Government intervened to substitute a goat for the child immolated every year by the Khonds; cf. also the pretended, and very characteristic, immolation, in Sweden, of a man clothed in boar's skin (see Goblet d'Alviella, "Les Rites de la momie," in *BRB* xxviii. [1868] 340). In Japan likewise in the time when the actual *hostia animale* (e.g. in the temple of Shawayo-jin, in Shizunao, frequent offerings of goats were made). On the other hand, the old human sacrifices kept up in the form of a ritual imitation (e.g. in the temple of Sakato-yo-jin, in Kazusa, after drawing lots among the faithful, the chosen victim is placed on a large stall, and the priest, armed with a great chopping-knife, makes a pretence of cutting him up with three blows; see Kato Setsōzō, in the *Chûo Kitoro* [Japanes Magazin] for 4th July 1872). In one of the stories from the Nihongi (i. 281) we have seen human sacrifice employed to expedite the construction of an embankment. More are sometimes buried alive in the foundations of a castle, a bridge, or an artificial island. They were called *Asi-bashira* ("human pillars"). But the most interesting example of this order of customs is the burying alive of human beings into the graves of Emperors and princes—a custom which took its rise according to the Nihongi (i. 218), after the funeral of Prince Naka-mikoto, which is certainly more ancient and becomes particularly connected with this funeral only, as Motoori very plausibly observes, from the custom of dressing the head of certain number of victims which brought this abuse to a head, and led to its suppression at subsequent Imperial funerals. This important custom, its significance, and its abolition are treated in an ancient *Ancientworship* (Japanese). As far as we know at the present day, the *hostias* (clay rings), circles of offerings which were made when the account to the Nihongi (i. 178 f.), took the place round the tomb of the row of men and horses originally buried alive, seem to have originated in Japan. The archeological discoveries of recent years have revealed them also in China (cf. Chinese art., in tombs of the Han dynasty [E. Chavannes, *Mission archéologique dans la Chine septentrionale*, Paris, 1910]), and, in a similar way, in tombs in Manchuria and the neighbourhood of Port Arthur (see art. by Hamada Kosak and Torii Ryuusuke, in *Kôka*), Tokyo, 1910, 1911). It may be asked, then, Are the Japanese effigies not of continental origin, and has not the Nihongi, as often happens, borrowed its account from some Chinese or Tibetan source? But it must not lose sight of the fact that the account of the Nihongi agrees with a passage of the Kojiki which is certainly genuine and authentic, saying that in the time of the Great Emperor Ei Augustus Princess Hiibun (the same empress whose funeral, according to the Nihongi, put an end to human sacrifices) and the *Kógi* (Effigy Makers) were established, and also the Hambushi (Earthenware Masters' Clan) was established* (Kojiki, 1947). The fact that human sacrifices, which had been suppressed, according to the Nihongi, in A.D. 3, must have been revived, according to a Chinese work (see TAJSI xvi. [1888] pt. i. p. 59), at the death of the Empress Himako in A.D. 437, only exemplifies the well-known inaccuracy of the connected chronology of the Nihongi, and does not prove that the reform was never accomplished—the redactors of the Nihongi simply, but very early, as is the invariable custom of the Easterners, more concerned as they are with antiquity that with truth. Moreover, it is difficult to see from what Chinese custom the custom of the Chinese Dionysus work is reported, the account of a transformation which is exactly opposite of the Chinese conception in this connection, viz. that the offering of straw or wooden effigies at funerals led to the substitution of living victims (J. Legge, *Chinese Classics*, Hongkong, 1861-72, "Memoirs," p. 9). On the other hand, the
account of the Nikongi is in entire agreement with all that we have noticed in Japan as regards the substitution of effigies for actual victims.

These substitutions occur in various forms. Sometimes, as we have seen above, animal victims take the place of human victims; sometimes, instead of statuettes (okimono) or flowers (chūten-riyō) in the tombs, there are other effigies of human form, such as the kane-hito-gata ('metal-human-form'), often mentioned in the Engishiki (10th cent.) among the regular offerings of Shintoism, and especially offered to river-gods (misumari, 'gods of water distribution')—a fact which goes to support a historical substitution of these effigies for actual victims, the occurrence of which is proved by a positive text of the Nikongi (i. 281). Similar human effigies, gilded or silvered, also took the place of offerings in the ceremonies of the Great Purification (Okosōraiki). The hereditary Corporation of scholars of Yamato and Kōzuki, who pronounced an invocation before this ceremony (nureto 11), offered a silver and gold sword, or rather of gilded wood, to the gods, in order that all kinds of calamity might be warded off from the Emperor, and that he might enjoy a long reign. The gilded sword (called karahori-tsuba, 'sword of purification') first received the breath of the Emperor; he blew over it in order to communicate his own uncleanliness to it. The sword was then bound to disappear along with the object to which it was thus attached. The silver man was also employed as an asa-mono ('ransom-thing'), i.e. as a means of expiating ritual uncleanness.

These human effigies substituted for victims persisted down to modern times. As witness of this there is a curious custom related by Astón (Shinto, 220) from the Shinto Mōmokō (1869):

"At the festival of Naroyé, held at the shrine of Kōken in the province of Owari on the 11th day of the 1st month, the Shinto priests go out to the highway with banners and noise and call the deity. They wash and purify him, and make him put on pure clothing. He is then brought before the god. A blank, a wooden butcher's knife, and cake for fasting are provided. Separately a figure is made to represent the captive. It is placed on the block with the captured man beside it, and both are kept there until the sacrifice is offered for that night. The next morning the priests come and remove the man and the figure. Then they take clay, and, making it into the shape of a rice-cake, place it on the captive's back, hang a string of copper rings about his neck, and drive him away. As he runs off, he is sure to fall down in a faint. But he soon comes to his senses. A mound is erected at the place where he falls down, and the clay rice-cake deposited on it with ceremonies which are kept a profound mystery by the private householders. The custom is an old one, it is said, and there are no passers-by. Therefore the priests go to a neighbouring village and seize a man. If they catch nobody on the 11th, they repeat the same.

Aston (p. 231) thinks that 'there is some difficulty in applying the principle of substitution for a human sacrifice where this sacrifice was made for a dead child, which has been in force so recently.' But, if we have seen offerings of live animals, as substitutes for human victims, continuing even to our own day (as observed in 1909, and quoted above), why should offerings of dead effigies not have had, with the same evolution, the same permanence? This would be in complete accord with the profoundly traditionalistic spirit of the religious customs of Japan.

There is one other custom that deserves notice in the domain of human sacrifices, if we regard live animals as primary victims, viz. the offerings of slaves (kami-tsu-ko) sometimes made formerly for service in the temples. Even in the mythological period we see the famous hero Yamato no Takeru, the Brave of Japan, hanging over some Emishi (i.e. Ainus), whom he had taken captive, for service in a temple (Nikongi, i. 209). Male victims of the same kind could be quoted from the historical period, e.g. in the year 625 (Nikongi, ii. 82 f.).

Human sacrifice properly so called exists, even in our own day, under the form of voluntary death in order to follow a master or a husband into the other world. The voluntary sacrifice, which is in evidence even in the earliest documents (see Kojiki, 285, 384; Nikongi, i. 351, H. 183, 234, 365), and which the Emperor Adze (668) endeavoured to suppress, from the Emperor Kōken in 468 (Nikongi, ii. 220) to the great shōgun Yeyasa in the 17th cent., has continued down to the 20th century. Cases might be cited during the Revolution of 1868, and again during the China-Japanese War, when, in 1895, the wife of an officer, Lieutenant Aasada, hearing of her husband's death in China, made it her duty to cut her throat in cold blood before her husband's portraits, with a dagger which, in anticipation of some such situation as this, had been one of her husband's presents. The modern Japanese admired this suicide, exactly as the ancient admired that of the Imperial Princess Yamanobe, who, in 686, when her young husband had been accused of treason and executed, 'hastened thither with her hair dishevelled and her feet bare, and joined him in death,' so that, adds the narrator, 'all who witnessed sighed and sobbed (Nikongi, ii. 284).

A recent example shows the extent to which these ideas still survive—the suicide of General Tōgō, Count Nogi, the hero of the Sino-Japanese War of Sept. 1915, at the very time of the funeral of the Emperor Mutsu-Hito, put himself to death so that he might follow his sovereign to the other world. Countess Nogi also killed herself in order to accompany her husband; and thus we see united in a single example, the two chief kinds of voluntary suicide mentioned above. On this occasion Japanese opinion was by no means unanimous with regard to the social utility of this act, which, though putting a harmonious completion to the life of a warrior of the old school, deeply imbued with the ancient traditions of loyalty, deprived the Japanese nation of a man of experience on whose services it could have depended should new dangers arise from outside. The policy of Tokyo, however, had to take measures to prevent this suicide being imitated by contagion; and even in the United States, in a house at Grand Junction, Colorado, two Japanese had to be arrested who had met to decide by drawing lots which of them should perform karakuri. Thus, just as General Nogi's will, offering his body to the Faculty of Medicine, with the reservation that his teeth, hair, and nails should be buried, shows the survival in him of a conception belonging to primitive magic (see M. Rayon, Le Chamanisme, Paris, 1927, pp. 30, 70, 256), similarly his dramatic suicide takes us back to the ancient belief in the virtue of human sacrifice, though indeed, makes no distinction between forced and voluntary sacrifice, as is clearly indicated by the fact that the one word fun-sha, i.e. 'following in death,' is used to denote the two indiscriminately.

2. Korean.—In Korea we may observe an analogous evolution to that which occurred in Japan, to this extent that the custom of human sacrifices, forced or voluntary, died hard and only by the personal efforts of reasonable rulers. In Japan, a humane Emperor (Shinnin, according to Nikongi, i. 178), already showing that progressiveness which is so common to the Japanese, said to his ministers: 'Though it be an ancient custom, why follow it, if it is bad?' Similarly in Korea, when a king of the country of Kuruy, who had died, his successor forbade his admirers to kill themselves on his tomb, saying that it was not a becoming custom; but still many perished in following their master in death (Tōgō, ill. 50). In the same way, in 502, several men and women had
already been sacrificed at the tomb of a king of Silla, when the custom of burying live victims was prohibited in this kingdom (46. v. 0).
Lemm. 492, cit. is cited to the author's extensive list of references.

MICHEL REVON.

HUMAN SACRIFICE (Roman).—Human sacrifice implies the killing of a human being as a mark of honour of a deity, as an act prescribed by religion and performed with due ceremonial. The religious requirement is based upon the idea that an enraged deity craves for human life. The anger of the deity, accordine to the beliefs of many peoples, is to be quenched in his sending war or pestilence in long years of life, thus the pestilence in the Greek camp before Troy was caused by the arrows of Apollo (Il. i. 51). In such cases the community in ancient times tried to save itself by sacrificing one or more human beings (Verg. Aene. v. 815: "unum pro multis dabitur caput"), and thus propitiating the divine wrath (propitiatory sacrifice). In the case where a particular individual was known to have sinned against, and thus to have brought upon himself the resentment of a deity, he was sacrificed as an atonement, so that the deity's wrath should not fall upon others (expitiatory sacrifice); thus the plague in Thebes was stayed as soon as the murderer of Leius was banished (Soph. Ed. Res. 90 ff.). At a later stage we meet with more merciful rites, usually spoken of as commutations of human sacrifice; the community, partly because it stands in need of men, and partly because it has become more humane in sentiment, endeavours to avoid the killing of men by changing either the mode or the victim of the oblation; it allows the victim to live, but exiles him (Eclipsus), or, instead of making the offering originally demanded, it offers figures of men or animals; thus animals were sacrificed by the Greeks to Apollo (II. I. 447 f.). When in the expiatory sacrifice the act of killing is still retained, it loses its religious character, and becomes capital punishment in the secular sense. Thus human sacrifice may at length entirely disappear from the practice of a religion, and, as we must not summarily assign to all religions the same course of development, the modern investigator is confronted with the question whether a religion from which human sacrifice is absent may formerly have had the practice or not.

This doubt affects also the Roman religion. G. Wissowa in the "Kultur der Römer" (420 ff.) denies that the Roman religion ever required human sacrifice, while others (cited by Wissowa, loc. cit.) assert that it did. It is certainly true that in the State religion, so far as history attests it to have been officially Roman, there is no evidence of the practice. From Cicero, pro Font. 31, and Cesar, de B. Gall. vi. 18, human sacrifice is referred to as something repulsive or abnormal, we may infer that it did not exist in the 1st cent. B.C., and the words of Livy (xxii. 1. 6), 'hostis humanus, minus Romano sacrum,' point in the same direction. Livy's reference certainly seems to clash with the fact, according to a number of Christian writers in the imperial period (Tatian, Or. ad Graecos, 129; Minucius Felix, 30, 4; and others; cf. J. Marquart, Röm. Staatsverwaltung, iii, Leipzig, 1855, p. 297), that a man ('bestarius,' 'Tert. Apol.' 9) was sacrificed to Jupiter Latiaris at the festival of the latter. W. Warde Fowler in "The Religious Experience of the Roman People," London, 1911, p. 112, 311) is of opinion that this points to a practice of sacrificing Herculaneum ('Tatian, 1. 18, 4) up under the influence of Oriental immolation and of the brutalizing slaughter in the arena. But, as the reference is an isolated one, it rather arouses suspicion, the more so because profane writers make no mention of the incident; J. Geffen (Zwei)

Greek. Apologen, Leipzig and Berlin, 1907, p. 65) and Wissowa (op. cit. 124) reject it as apocryphal. But it would be a mistake to regard it simply as a biased fabrication of Christian apologetic spirit. The present writer is inclined rather to suppose that the celebrations of the Latiaris festival included a practice that of offering up human beings as a form of sacrifice. The lictors' cords are now lost, and they were described as the hands of a destitute, as sacrifices to Jupiter; and that the Christian writers mentioned above did not unwillingly accept the statement as fact.

The alleged human sacrifice at the Latiaris festival must, therefore, not be appealed to as proving the existence of the practice of human immolation in the Roman religion. But, on the other hand, the references of Cicero, Cesar, and Livy, as cited above, furnish no evidence as to primitive times; and, in order to decide the question in relation to that earlier age, such rites and beliefs as may possibly be survivals of an ancient practice of human sacrifice (Wissowa, op. cit. 420) must be examined in detail.

The Compitonia are a theme of particularly vigorous discussion, in Acta x. (1897), pp. 161, 167; Wissowa, op. cit. 167; the present writer's own view will be given in what follows. It was the custom at that festival to hang up in the chapels of the Lares many human figures and as many birds respectively as there were slaves and slaves present—'ut vivas parcerent [Lares]' (Paul. Fest. 239). Even if we regard the purpose of the ceremony as being correctly indicated in that ancient phrase, yet it would not be pertinent to apply the term 'commuted human sacrifice' to the rite. For this would imply that originally the whole house- hold were actually sacrificed—an idea that cannot be entertained. All that the custom in question has in common with human sacrifice is its basis, viz., the belief that the gods have a desire for human life. Men seek to satisfy that desire in the easiest possible way; they present the deity with objects of no great value, which, nevertheless, on some ground or other, are regarded as salient to a man's life, e.g., his image (which primitive belief identified with the original; cf. O. Weinreich, Antikes Heilungsgenürgen [as Balginsaesch. Versuche u. Vorarbeiten, viili, 11), Giessen, 1909, p. 144), or a ball (a crude representation of the head, the seat of life). By a similar gift, viz., beans (on the presentation of which to human gods, cf. R. Wünsch, Das Frühstück der Insel Malta, Leipzig, 1905, p. 31), the paterfamilias, at the festival of the Lemuria, purchased deliverance from the attacks of the spirits of the dead (Ovid, Fasti, v. 438: 'his regimo neque mesaque faba'). In the ceremony of the Compititia, therefore, the essential element of human sacrifice is referred to as something repulsive or abnormal, we may infer that it did not exist in the 1st cent. B.C., and the words of Livy (xxii. 57. 6), 'hostis humanus, minus Romano sacrum,' point in the same direction. Livy's reference certainly seems to clash with the fact, according to a number of Christian writers in the imperial period (Tatian, Or. ad Graecos, 129; Minucius Felix, 30, 4; and others), that a man ('bestarius,' 'Tert. Apol.' 9) was sacrificed to Jupiter Latiaris at the festival of the latter. W. Warde Fowler in "The Religious Experience of the Roman People," London, 1911, p. 112, 311) is of opinion that this points to a practice of sacrificing Herculaneum ('Tatian, 1. 18, 4) up under the influence of Oriental immolation and of the brutalizing slaughter in the arena. But, as the reference is an isolated one, it rather arouses suspicion, the more so because profane writers make no mention of the incident; J. Geffen (Zwei
Pythagoriae, Berlin, 1906, p. 19). These two were vicarious gifts, and do not imply an ancient practice of human sacrifice.

The custom of the Caterva, again, has been connected by H. Usener (Kleine Schriften, iv. [Leipzig and Berlin, 1913] 222) with cannibalistic human sacrifice. 'Caterva' was the name given to a fate of death to which a child was exposed at birth and which was considered by the Romans as a penalty for the two crimes of infanticide and murder (Parl.-Festus, 379)—a view rejected by Wissowa (p. 450, 5), who says: 'This expulsion or abandonment is rather the recognized method of performing the consecration of living beings'; and he refers to Suet. Clem. 81, where he finds an instance corroborative of his opinion. The passage in question, however, merely shows that the consecration of the living through the prevalence in later times; it was not the natural form, else the Romans would have availed themselves of it in the Fer sacrum as well (Samter, loc. cit. 379). We must rather assume that originally, as the vow was a unity, so its fulfillment was also uniform. Originally, that is to say, human beings and animals alike were either sacrificed or else expelled from the country. But, as in the ritual of blood-offerings the tendency is usually towards a mitigation rather than towards an intensification of their severity (E. Moseley, 457 xii. (1909) 605), we must regard the immolation of human beings (as of other creatures) as the primordial form; and it was, therefore, probably in this form that the Romans observed the general practice of Italic tribes in ancient times. We cannot, indeed, trace the observance of the sacred Spring in Rome before 217 B.C.; nevertheless, it is possible that about that time the Romans received it from their neighbours as something out of the common (it was settled after consulting the Sibyl's Books (Livy, xxii. 9). 8), and once modified it to suit their own circumstances.

In any case, it is attested by other data that the fundamental idea of propitiatory sacrifices—'unam pro multis dubitans capit'; formula, 'acer esto,' as, e.g., in Festus, 33, and Serv. Ast. vi. 690. Wissowa (op. cit. 368 f.) is of opinion that at first the state simply delivered this judgment, and left the transgressor to the vengeance of the deity, and that the law itself administered the actual penalty only in later times; in which case, of course, the penalty would have no connection with human sacrifice. But it seems to the present writer—and it is also Mommsen's view (Mommsen, 1889, p. 900 ff.); more literal, perhaps, is the statement of Procopius (Wars. 22), who says that the penalty is old, and implies a sacrifice. No one would venture to kill a creature which had become the property of the state. Wissowa's objection that the sacrificial object must be without blemish—as an offender, of course, could not be applied to the expiatory, but only to the propitiatory, sacrifice; nor, indeed, does it imply everywhere even to the latter, for we find that the Greeks offered criminals in propitiatory sacrifice (Samter, loc. cit. 375; A. Thomson, AEB vi. 1). A survival of human sacrifice among the Romans has also been found, and in all probability rightly, in the Fer sacrum. Like other Italian peoples, as, e.g., the Etruscans (ibid. 315 f.), so the Rutuli (Serv. Ast. vii. 786), in times of great distress, the Romans, when at war with Hannibal, sought to procure a happy deliverance from trouble by promising to a deity all the downed enemy in a single spring (Livy, xxii. 9. 7 ff., xxxiv. 44. 1, 3xiv. 44. 1), and these were then duly sacrificed in the Fer sacrum which, as we thus learn, obtained among the Romans was not the most ancient form.

Originally the dedication embraced also the human progeny; the children were allowed to grow up, and were then driven beyond the limits of the country (Strabo, loc. cit.; Festus, 321; Dion. Hal. Ant. Rom. i. 18). The ancients themselves interpreted this act of banishment as a mitigated form of the older practice of imperial sacrifice (Parl.-Festus, 379)—a view rejected by Wissowa (p. 450, 5), who says: 'This expulsion or abandonment is rather the recognized method of performing the consecration of living beings'; and he refers to Suet. Clem. 81, where he finds an instance corroborative of his opinion. The passage in question, however, merely shows that the consecration of the living through the prevalence in later times; it was not the natural form, else the Romans would have availed themselves of it in the Fer sacrum as well (Samter, loc. cit. 379). We must rather assume that originally, as the vow was a unity, so its fulfillment was also uniform. Originally, that is to say, human beings and animals alike were either sacrificed or else expelled from the country. But, as in the ritual of blood-offerings the tendency is usually towards a mitigation rather than towards an intensification of their severity (E. Moseley, 457 xii. (1909) 605), we must regard the immolation of human beings (as of other creatures) as the primordial form; and it was, therefore, probably in this form that the Romans observed the general practice of Italic tribes in ancient times. We cannot, indeed, trace the observance of the sacred Spring in Rome before 217 B.C.; nevertheless, it is possible that about that time the Romas received it from their neighbours as something out of the common (it was settled after consulting the Sibyl's Books (Livy, xxii. 9). 8), and once modified it to suit their own circumstances.

In any case, it is attested by other data that the fundamental idea of propitiatory sacrifices—'unam pro multis dubitans capit'; formula, 'acer esto,' as, e.g., in Festus, 33, and Serv. Ast. vi. 690. Wissowa (op. cit. 368 f.) is of opinion that at first the state simply delivered this judgment, and left the transgressor to the vengeance of the deity, and that the law itself administered the actual penalty only in later times; in which case, of course, the penalty would have no connection with human sacrifice. But it seems to the present writer—and it is also Mommsen's view (Mommsen, 1889, p. 900 ff.); more literal, perhaps, is the statement of Procopius (Wars. 22), who says that the penalty is old, and implies a sacrifice. No one would venture to kill a creature which had become the property of the state. Wissowa's objection that the sacrificial object must be without blemish—as an offender, of course, could not be applied to the expiatory, but only to the propitiatory, sacrifice; nor, indeed, does it apply everywhere even to the latter, for we find that the Greeks offered criminals in propitiatory sacrifice (Samter, loc. cit. 375; A. Thomson, AEB vi. 1). A survival of human sacrifice among the Romans has also been found, and in all probability rightly, in the Fer sacrum. Like other Italian peoples, as, e.g., the Etruscans (ibid. 315 f.), so the Rutuli (Serv. Ast. vii. 786), in times of great distress, the Romans, when at war with Hannibal, sought to procure a happy deliverance from trouble by promising to a deity all the downed enemy in a single spring (Livy, xxii. 9. 7 ff., xxxiv. 44. 1, 3xiv. 44. 1), and these were then duly sacrificed in the Fer sacrum which, as we thus learn, obtained among the Romans was not the most ancient form.
HUMAN SACRIFICE (Roman)

fact that the *deo votio* involved the sacrifice of the general who faced death by fire; for his people, the enemy would share his doom.

But the general, in thus offering his own person, really proceeded upon the same motives as actuated M. Crassus. Hence, the idea which gave rise to human sacrifice operates here too; even the religious form is not wanting—

the *deo votio* as given by Livy (viii. 10. 11). But here the image serves as a substitute for the living man (Deubner, loc. cit. 81).

This substitution may have been allowed even when the custom of devoting a legionary was first introduced; certainly that custom seems to be of later origin than the *deo votio* of the general (see above), so that it is not necessary to assume that originally the legionary was ever actually sacrificed at all.

Thus the *Arpi sacravit* and the death-penalty seemed to indicate that human sacrifice had a place in the primitive Roman religion, while the *deo votio* shows that self-immolation was not unknown in it. But apart from such national institutions, we find in Roman actual cases of human sacrifice—or of indubitable substitutes therefor—only in so far as they had been introduced under foreign influences. These, moreover, are so numerous that we can hardly help thinking that the practice could never have gained so firm a footing if it had been radically obnoxious to Roman sentiment.

The assumption that the ceremony was derived from *Greek ideas*, the participation of the Roman priest—certainly strikes us as strange. We may perhaps suppose that the gild of bridge-builders, the Pontifices, were in reality performing expiations for the observance of a foreign rite at the *Pons sublicius*, which was under their charge, and that in these, they associated with themselves the Vestal Virgins and the Flaminiae—unless, indeed, the ceremony was originally a Roman festival upon which the *Gracianus rite* was subsequently grafted (Deubner, A.W.B. xxiv. [1911] 301).

With the *Arpi sacravit* learned men of antiquity associated a *Roman propitiatory prayer* (cf. waggers). The expression refers to this in one instance (p. 254), the house of which we fill up with certainty:

Sagarnatus (de ponat omnibus), gnes, causae Manilum lance referit, quod ad *Arpi sacrificium* inscribitur (primi Abertiocis, aliquo hamesem, sungaulat (necasque qui post, incolumis) Dii Patrii et Matris, magisque (torquetur) / sacrif.)... This sacrifice, he says, was subsequently charged by Herode to the Semites; *Arpi sacravit* is also used (cf. also Ovid, Fasti, i. 329; de Otto, Sprachwissenschaft. Leipzig, 1906, p. 836). Varro (ap. Num. 3. 5 Lysias) gives different explanations, asserts that the old Semites, when no longer allowed to vote in public assemblies, were summoned to this old practice to abound the power of the *Arpi sacravit*... but this cannot be the true explanation, as it does not accord with what we know of the relations of the Romans to Semitic nations (Krommer, Alte Staatswesen, Leipzig, 1906, I. 206). We must therefore assume that the power's points to an ancient custom of throwing people from the bridge. Nevertheless, this cannot be regarded as human sacrifice; it was in reality a secular rite of doing away with burdensome old people who would no longer maintain (R. Scholz. 'Der Semitismus in der griechischen Religion. Leipzig, 1903. p. 527). It is certainly probable that the Romans of primitive times trusted the aged in this harsh way; thus, when the Senate of the Gauls, they left their old people behind them without means of self-defence—it was only in later writings that old people were sent to have remained because of their age (Livy, v. 41). Viewing the matter purely by itself, we might think that the Romans would be willing enough to sacrifice the aged as *Arpi* by throwing them from the bridge. But the case is not so clear. For example: Wards Fowler (The Roman Festivals, 110): rightly says that the incidental killing of an individual could not enter into the annual practice of putting considerable numbers to death. What we have in the case of the *Arpi sacravit* is then
fore a secular act of dispatching them on grounds of public utility. We have an exactly similar case in the slaying of the Ras Numan, and this likewise was not a human sacrifice, a practice allowed nor condoned by the Jewish law, by killing the priest of Diana of Nemi. He assumed the position of god himself, and yet he might be a little taken in the hands of another fugitive (Nero, 289). This is in line with a practice found among many peoples; they kill their king or priest before the embryo of an enemy, who is dependent upon his remaining strong. They appoint another man as his successor, who then discloses his strength by overthrowing the man whose place be taken (Frasier, OP, II, B. Dying God, 1910, p. 143 ff.).

With the sacrifice of Argive enemies, however, it is probably correct to associate the rite of burying alive a man and a woman belonging to a hostile nation (Wissowa, 421). In 216 B.C.—the most trying period of the war with Hannibal—Livy (xxii. 57. 6) informs us that 'ex fatalibus libris sacrificiis simul atque simul sacrificantibus inter quattuor Gallus et Galla, Graeco et Graeco in foro bavarico sub terris vivis demisi sunt in locum saeco consuetum, iam ante hostia humanarum . . . imbutam.' The Subsine Books (Plut. Marc. 3, Quaest. Rom. 83), that is to say, preserved at that juncture special means of allaying the anger of the gods, among these means being the previously tried expedient of burying the man and a woman of the enemy's people. The strict rule was evidently that the two victims should belong to the nation against which the war was then actually or at least was considered as then actually at war at the time (Pliny, BN xxvii. 12: 'generum cum quibus tum res esset'). Now the hostile peoples had one at that time been the Greeks and the Gauls, and both of these races, by an erroneous conservatism, were sacrificed also during the war with Carthage (Diels, 85 ff.). That this custom was suggested by Greek oracular writings is shown by the fact that the prescribed prayers were uttered by the president of the Quindecimviri (Pliny, loc. cit.), whose principal function was to guard the Libri Subsilini. The import of the rite was that of a sacrifice to the gods, who thus received the life of a man and a woman as pars pro toto; with the lives of the two victims the lives of all the men and women of the same tribe were magically bound up ('obligamentum magnum,' Orosius, iv. 13. 4); and, if the gods accepted the one pair, the rest of the nation would necessarily follow them. Pliny indicates that he had himself witnessed a sacrifice of this kind ('etiam nostra actas vidit')—'in the vicarious ceremony,' says Wissowa (433); and present writer is not certain as to the latter point, as the Emperor Aurelian (see Vite Hist. Aug. 20), when organizing the consultation of the Subsine Books, ordered 'oraculabia gentis capitis' to be reserved for sacrifice in case of need.

Finally, in the reign of Augustus, another innovation, and producing into a new type of human sacrifice, viz. a devoto. Dio Cassius (liii. 20) states that S. Pucvinus consecrated himself to Augustus in the manner of the Iberians (cf. Val. Max. ii. 6. 11). This clearly means that the tribune, invoking the gods, vowed that, if they demanded the life of the Emperor, they should take his instead. Vows of this kind are met with also in later times. When the Emperor Caligula was sick (Suet. Cal. 27; Dio Cass. lix. 8; Bouché-Leclercq, loc. cit. 119), two Romulian Worthies promised that they by the Emperor might recover; and the latter took them at their word. The devoto on the Emperor's behalf is mentioned also by Fronto, p. 6 (Nabers). This example indicates that outside the official religion of Rome the idea of human sacrifice was very powerful in private circles. How far the persons concerned were influenced by conceptions inherited from ancient Roman life, or by foreign ideas, or were actuated by their own thoughts, is in most cases difficult to decide.

The most outstanding instances may be briefly indicated as follows (cf. v. Lassalot, Studien d. klassischen Alterthums, Breslau, 1890). Those who took part in the consecration of Carthage are said to have drunk the blood of a slain man mixed with wine (Plut. Secr. 25), and to have bound themselves by dreadful oaths, believing that the war was already classed among human sacrifices by Minucius Felix (30. 5). In 48 B.C., Caesar, as a penalty for mutiny, caused two soldiers to be sacrificed in the Campus Martius by the priest of Mars (Dio Cass. xlii. 24), evidently in the belief that that god, who had been reused to anger by the mutiny, would be propitiated by the oblation. S. Pompeius threw men into the sea, doubting as an offering to Poseidon (ib. xlvii. 48). In 41 B.C., on the ideas of March (Suet. Aug. 16), Octavian is reported to have sacrificed three hundred men at the altar of the Divus Julius (trig. trig., Dio Cass. xlviii. 14), his intention being to propitiate the manes of the murdered dictator. Perhaps Vergili, when speaking of the captives 'quos mitigere umbros inferi/' (Aen. xi. 81), had this sacrifice in his mind; in other words he certainly creates ancient precedents for the religious and human sacrifice. In a time of threatened calamity, Nero consulted his astrologers, and received the response: 'sola reges tali service exspectari oportet' (Suet. Nero, 30). This was probably a notion of Eastern origin, and such an Oriental superstition explains also the self-immolation of Antinous on Hadrian's behalf (Dio Cass. lxxxix. 14); cf. art. HEROES AND HERO-GODS [Egyp.], p. 651). The Emperor Commodus put a man to death in the worship of Mithra (Vita Hist. Aug. 9); but the fact that this action is spoken of shows that the records of habitual human sacrifices by the priests of Mithra are false (F. Cumont, Textes et monuments relatifs aux mysteres de Mithra, Brussels, 1899, i. 60). Particularly in the practice of magic, which prevailed widely in the Imperial period—a period profoundly affected by Oriental superstition (Pliny N.H. 8)—human beings were frequently put to death, either because the bodily parts of men were believed to be peculiarly potent, or because—what specially concerns us here—the spirits of the under world would not give their aid unless they received a human being in sacrifice. It is not always easy to say which of these two motives prompted the killing of men in this connexion. The best-known source of information regarding the practice is Horace's poem Consilia (Epod. 5). Cicero (in Fatin. 14) charges Vatinius with the crime 'inferorum animas elicere, puereorum exitis deos manes maeract.' Didius Julianus sacrificed children in order to learn the future (Dio Cass. lxxiii. 18), and the word 'alow children and practised magic' (ib. lxxxix. 11).

These numerous instances of human sacrifice in the non-official religious sphere explain why the laws, the Senate, and the more human Emperors frequently made a stand against the practice. Pliny (BN xxx. 12 ff.) refers to a servitioconsultum of 97 B.C. directed against it, and to the injunction by which Tiberius prohibited the immolations of the Druids. Tiberius also forbade the sacrifice of human beings in the worship of Saturn in Africa (Tert. Apol. 9), Claudius reprimanded the Druids (Suet. Claud. 25), and Hadrian put an end to human sacrifice in the cult of the Cyprian Jupiter (Lact. Inst. i. 21. 1; Wissowa, 85). The jurist Paulus to this effect (Cod. 16. 16) writes: 'qui hominem imolaverint ex eis sanguine litariverunt, farnum templumque polluturint, bestias obiciabant, vel, si homines fint, capite puniuntur' (cf. Monumass, Strafrecht, 639 ff.).

We may sum up our investigation as follows. The primitive ideas which underlie the practice of
HUMAN SACRIFICE (Semitic)—The discussion of this subject falls naturally into two parts: (1) a marshalling of the evidence for the existence of the rite, and (2) an attempt to deduce the purposes and ideas underlying it.

I. EVIDENCE FOR THE EXISTENCE OF SEMITIC HUMAN SACRIFICE.—1. Egypt.—That the Egyptians were an offshoot from the original Semitic stock, separated from it in early times of historic period, is a favoured theory of their origin (see, e.g., G. A. Barton, Semitic Origins, London, 1902, where the theory is well worked out). They are, therefore, naturally to be included in an analysis of the evidence on the subject. It should not be forgotten that in any case the civilization of the Egyptians from the rest of the Semitic family must have taken place at a date so remote that the existence of the rite of human sacrifice among them in common with the Semites proper does not necessarily prove its existence in the primeval times before the Egyptian accession. It might have developed in Egypt independently, or under the influence of the ideas and practices of later surrounding tribes.

The existence of human sacrifices among the Egyptians has often been denied (E. Meyer, Gesch. der alten Ägypter, Berlin, 1875, p. 43; denies the evidence from native documents, while admitting the possibility of the Classical testimony being founded on true traditions; see also Dillmann, Handb. der AT Theol., Leipzig, 1895, p. 96). But the testimony of certain Greek and Latin authors, based apparently on tradition, and corroborated by objects discovered in certain Egyptian writings and by scenes represented in tomb wall-paintings, seems to indicate that this practice was observed, at least in a modified or symbolical form, down to later historic times.

Thus, Diodorus Siculus (1. 88) speaks of the king of Egypt as having formerly sacrificed men of red color—the colour of Set or Typhon—at the grave of Osiris; and he adds the important detail that, as red men were rare in Egypt, the victims were always foreigners. Manetho (Ap. Porphyrius, ed. Muller, P.G. ii. 616, no. 86) speaks of human sacrifices to Hera in Heliopolis, and of the modification of the rite by Amosis, who substituted waxen images for the victims. From another fragment (P. 616, no. 84) it appears that certain similar sacrifices the victims were ’Typhonic’ (red men), and were burnt alive; that the sacrifices took place in the dog days, and were therefore probably polyphylactic against drought or pestilence; and that the ashes of the victims were collected and scattered against the wind. Procopius (de Bell. Pers. i. 19) states that in the temple of Philae the Blemmyes offered human victims to the sun. Philo of Alexandria (De adoratione Dei ad Iustitiam, 23) records that an incident occurred in the temple of Serapis at Alexandria when they had burned the heads of infants with live coals, and glided away. He mentions also that a young artist has written a book treated of the subject (Gen. 32, 24) referred to in the text. It is an interesting fact that the Egyptians had a cult of Asklepios, and that his temple at Epidaurus was dedicated to Osiris. On the other hand, Herodotus (i. 40) states that the existence of the practice in Egyptian religion; but that intelligent tourist reports only what his ‘dragomans’ thought fit to tell him, and his evidence on a subject which necessarily belongs to the oracles of religion is therefore not conclusive.

Besides these ritual sacrifices, there is evidence for foundation sacrifices, modified, after the primitive period, by the influence of a new religion. There are numerous instances of such a practice (see Lefebre, ’Rites égyptiens,’ in Publications de l’Ecole des lettres d’Alger, 1880, pp. 4, 10, 38), and further, the special circumstances of Egypt, dependent for its life on the Nile inundations, demanded a Nile sacrifice, which the Arab historian Murtada describes as lasting down to the Muslim occupation of Egypt (A.D. 648).—A young girl being about to cast into the river to ensure a sufficient rise in the water (Eng. tr., 1672, p. 143). A survival of this custom is described by E. W. Lane (“Manners and Customs of the Modern Egyptians,” 1830, ch. xxvii.). A conical pillar of earth was erected in front of the dam at Cairo, and sown with millet. It was called ‘orizma’ (‘bride’), and no doubt represented the trunk from which the Nile sprang. It is not to be expected that the native Egyptian monuments themselves should necessarily corroborate these statements of the Classical writers, even if the latter be strictly trustworthy. For, in general, the native is not so likely to record facts and practices which for him are commonplaces as is the foreigner to whom they are less familiar. But some passages in inscriptions and some pictures have been collected, which appear to show that the statements quoted are at any rate not altogether without foundation. It is the appearance of the statues of the king in the procession from his expedition to Syria, clubbed seven of his chief captives before the god Amon (see E. Naville, The Old Egypt, Faith, Eng. tr., 1909, p. 290). In the inscription on the tomb of Seti i. (II. p. 296) the tale is told of the attempt of men to revolt against the sovereignty of Râ; of the revolt in the land of the human race; of the partial carrying out of this resolve by Hathor; of the appeasement of the wrath of Râ by a draught mixed with human blood; and of his resolve to substitute animal for human sacrifice in the future. Some such substitution is perhaps hinted at in the dark saying of the Book of the Dead (The Derveni Papyrus).

“When the fiends of Set come and change themselves into beasts, the great sovereign princes, on the festival of the breaking and turning up of the earth in Buto (Bubastis), they arise in the presence of the gods therein, and their blood flows among them as they are slain down.”

This seems to refer to a ploughing festival, wherein the ‘Typhonic men’ of the Classical writers were replaced by animals.

Among scenes on Egyptian monuments suggestive of human sacrifice, the memorial of Mentheherhepesef (Maspero, in Mem, de la mission archéol. française en Coït, v. [1899] 435) has an important place. One of the scenes in this tomb represents a person called a tekenu, dragged face downwards on a sledge; another shows the (fictitious) strangulation of a child at the sacrifice. It is not clear whether the sacrifice, on the whole, implies an actual sacrifice in an earlier age.

2. Babylonia and Assyria.—If traces of human sacrifice are obscure and ambiguous in Egypt, we are yet more so in the remains of the civilization of Mesopotamia. This is surprising, for people
with a highly developed pantheon and a complex ritual system, and notoriously ferocious in warfare, might be expected to reveal sacrifice among their regular religious practices. A bilingual text (4., Rawl. 20, no. 6) directing that 'the father shall give the life of his child for the sin of his life, the head of his child for his own head,' and so forth, would certainly be a proof of the existence of vicarious human sacrifice if the translation were sound; but, according to the Zimmermann (KAT. 1902, p. 597) and Jerome (A.D. in Lichtes des alt. Orientes, Leipzig, 1806, p. 566), the word rendered 'child' should properly be translated 'slave' or 'another obscure description' (i.e., Rawl. 61) contains a passage which has been rendered 'the son is burnt on the high places' (when the crops fail), but it seems more probably to mean 'the grain [of a certain species] is burnt in the heat of the sun.'

Less questionable evidence, however, is not wanting. The first occurs from that most important chapter 2 K 17, which describes the practices of the departed tribes which were substituted for the captivity Israelites. There (v.10) the Sepharvites (apparently the people of Sippah) are stated to have burnt their children in the fire to Adrammelech and Anammelech, the gods of Sepharvaim (= Adar-Malik; cf. Adrammelech, the name of Sennacherib's captive son, 2 K 18:6) and Asam-Malik. This rite obviously was carried by the Sepharvites from their old to their new home; and if we can retain anything of the men of Sippah, then such sacrifices must have taken place in the town of Sippah. The chief god of Sippah was Samas, the sun, who was also called Asar. It is interesting that Cod. A of the LXX in this passage presents the form 'Asaramas'. A human sacrifice seems to be actually figured in a seal published by Ball (JPSA xi. 1882) 149, where the god, a seated figure, with the list of the names of his labours, holds in his right hand the following figures are represented: (1) a priest standing, holding a sceptre in both hands, facing (2) a divinity, standing on the top of a stūra, and holding in his right hand a curved sword, in his left a sceptre. Flames burst from his shoulders; behind him is an altar, with vegetable offerings upon it. (3) Behind the divinity are two standing figures, clothed in leopard skins, with their right arms raised in the attitude of striking. Between them is (4) a kneeling man, wearing only a loin-cloth and a head-dress. Above him is a representation of flames, and flying towards him is a bird of prey. One of the standing men clasps the neck of the kneeling one and pulls aside his head, as though to expose his throat conveniently for the sacrificial blow.

Less certain evidence is the prescription that a son or a daughter shall be burnt on the altar of a divinity as a penalty for a breach of contract (Johns, Assyr. Deeds, Cambridge, 1888-1901, ill. 245), which may simply be a penal provision; and such passages as 'I burnt their boys and girls in the fire,' in Assurbanipal's triumphal inscriptions over conquered cities, which merely record a barbarity consonant with the rest of the acts of that abominable savage. There is, however, a magical text (quoted in Zimmermann, KAT, 599) which mentions the sacrifice of a slave along with an ox or a sheep.

The practice of human sacrifice in the religion of the Semitic predecessors of the Hebrews is amply proved by certain OT passages (Dt 19:10; 18:20; and by inference in such prohibitions as Lv 18:21), and has been corroborated by the results of recent excavations. In the High Place at Gezer, and in connection with the altar at Taanach, the skeletons of new-born infants have been found buried in jars. Similar discoveries were made in the corners of houses, under or close to the foundation. Two burnt skeletons of children about six years of age were found in the Gezer sanctuary, and near it was a cistern which had apparently been adapted as a receptacle for the refuse of sacrifices. Large numbers of animal bones, and many human bones of both sexes and all ages, were found in it. The excavator at Gezer was careful to get an expert medical opinion that some at least of the infants found buried actually lived a separate existence, and that they were not merely still-born or untermied births thus disposed of (with or without the recondite notions of inducing a re-birth and second chance of life, as suggested in Fraser, Adonis, Attis, Osiris, London, 1907, p. 83). At Tell Mutesellim (Megiddo) a girl of about fifteen had been slaughtered at the foundation of a large building, and her skeleton had been built into the wall. In two cases at Gezer the skeletons of young persons (a youth about eighteen, and a girl of about twenty-one) were found, which had evidently been sown in two. There was nothing to indicate clearly the circumstances under which so exceptional a form of execution had been adopted.

4. Arab tribes, ancient and modern.—Under we include the various tribes of the Transjordania provinces, the Sinaiic peninsula, and North Arabia.—Known as the Midianites, Ammonites, Moabites, etc.—as well as the Arabs before they adopted the teaching of Muhammad. These tribes were all so closely related that it is difficult to separate many of the practices under discussion among one or two will probably be sufficient proof of its prevalence among them all. Direct evidence is afforded by the incident of the sacrifice of Mezlah, who insulted his heir to Chemosh, when hard pressed by the Israelites (2 K 3:27)—an act which seems to have struck terror into the victors, who fled from the wrath of Chemosh when they encountered him. Wellhausen (Rechte arabs. Heidentums, Berlin, 1897, pp. 42, 43, 115) and other scholars have collected the indications of human sacrifice which remain among the Arabs, in spite of the efforts of post-Islamic authors and copyists to efface the traces of the rites and beliefs of the times of ignorance. These show clearly that the Arabs offered prisoners of war to the stellar and other divinities, and also sacrificed boys to Dusares and al-'Uzz, the morning star. The best-known example is that related by Nilus (Narrawa, vi.) of his own son Theodorus, who narrowly escaped being a victim. He was stolen by the Saracens, c. a.D. 600, and was to have been sacrificed. The ritual time for the offering lay between the appearance of Venus above the horizon and her disappearance in the rays of the rising sun. In answer to the boy's prayer, his captors overheard, and the time had already passed when they awoke; he therefore brought instead to the slave-market of Elusa, of which place he lived to become bishop.

5. Hebrews.—This member of the Semitic family was no less prone than the rest to human sacrifice, and required the special instruction of lawyers and prophets to eradicate the practice. Their great ancestor was moved to offer his son Isaac (Gen 22). Japhethah offered his daughter (Jg 11:23) under circumstances differing only in detail from the case of Mezlah—in the one the vow preceded, and the act followed, the victory; in the other the act itself was prior to the issue of the battle. The underlying ideas, however, were identical, and, notwithstanding all attempts to prove that in some parts of Egypt unworthy births are buried in the corners of the house, the son of God did not die in a graveyard of the village. This may conceivably be a survival of the practice of immolating a child or childless woman when a foundation of a house, and laying the corner-stones on the body.
explain away or to modify the Hebrew instances, there can be no reasonable doubt that it involved the death of the victim. Samuel 'hewed Agag in pieces before the Lord' (1 S 15:33), but this is a doubtful rendering of the Hebrew expression. (See Pless and Henderson, 'The Intention to Sacrifice.' 1912, p. 221.) Hiel re-built Jericho 'upon' two of his sons (1 K 16:34), i.e. sacrificed them at certain stages of the work, as we have seen to have been done at Megiddo and elsewhere. After the partition of the kingdom, the northern branch (2 K 17:17) as well as the southern, especially under Ahas (18:16) resorting (21:1), sacrificed children in fire; by the time of Jeremiah a special place, the Be Baal Hinnom, had been set aside especially for this rite. On the other hand, Isaiah (58:7), Micah (6:6), Jeremiah (19'), and Ezekiel (20:29) added their denunciations to the direct prohibitions of Leviticus (18:21) and other passages in the law of the Pentateuch. It does not fall within the scope of this article to discuss the question to what deity these various sacrifices were offered, or to inquire into the relationship between Jehovah and Moloch (see ERE i. 290). The legal cases quoted above are sufficient to prove the existence of human sacrifices among the Hebrews, without calling in more doubtful instances, such as the murder of Abel (Gen 4), the death of Uriah (2 S 6), the massacre of the priests of Baal (1 K 18), and other events, where critics have traced ritual acts with more or less improbability.

6. Phoenicians and Carthaginians. — Here, as in the case of the Egyptians, we have to trust very largely to the testimony of Classical writers. Of the Phoenicians, who loomed so largely in the works of the antiquarian charlatans of a hundred years ago, we really know next to nothing; and the usual inscriptions of Carthage are non-illuminating. Three or four Numidian votive tablets have been supposed to state that A has offered his son B, but neither reading nor interpretation can be considered trustworthy (see Gesenius, 'Scripturis lingue Phoen. monumenta,' 1849, pp. 446 ff., 453; these inscriptions are not yet included in CIS). Eusebius, however (Prop. Ewng. iv. 16), following Sanchamathion (apud Philo), speaks of the Phoenicians offering their dearest to Kronos; and other writers ascribe the same custom to the Phoenician colonies of Cyprus, Carthage, and Massilia.

For Cyprus, see Reuss, loc. cit.; for Carthage, Porphyrus (de Abel. ii. 46), Diodorus Siculus (xx. 14), and Pliny (HM xxxviii. 4); for Asia Minor, Servius (in Aen. xvi. 107); for Egypt, Servius (in Aen. iii. 67). 7. Southern Semites. — The Semitic-speaking people of Abyssinia appear to have been originally a colony from S. Arabia, and presumably carried with them from the former home all the rites of their religion, including that of which this article treats. No direct evidence, however, bearing on the subject is to be found in the unsatisfactory literature relating to that little known country.

II. THE PURPOSE OF HUMAN SACRIFICE. — Human sacrifice is the offering of a human individual to a divine power. It is generally understood to involve the slaughter of the victim, but that is not absolutely necessary; the life of a medieval anchorite, walled up in a narrow cell, was sacrificed no less literally than was that of the son of Methuselah. But in the Semitic world, with some exceptions and modifications presently to be noted, the victim was actually put to death. It is of the highest importance to distinguish the cases of sacrifice from the following acts, which are sometimes confused with them: (1) murder for political or criminal causes, such as the satisfaction of private grudge or greed; (2) execution of criminals and prisoners of war; (3) blood-revenge; (4) infanticide, as organized among the Arab tribes; (5) slaughter for medical purposes, e.g. to procure the baths of children's blood supposed to cure leprosy (on which see Pliny, HN vii. 42); (6) sacrifice, in the sense of offering to a god, of the first three of these, all of which have been called 'sacrifices,' are the stories of Abel (Gen 4), Agag (1 S 15:33), and Jabin (Judg. 5:21). It is interesting to note that none of these cannot have been a sacrifice in any case, as the victims were 'killed' (see De 21), and cf. the executions in Nu 25, which have also been erroneously taken as a sacrifice. The fourth, on which see the gruesome 'Additional Note C' in W. R. Smith's 'Onish and Marriage,' London, 1903, p. 291 ff. is merely a practical device to reduce the non-combatant members of a tribe.

In a true human sacrifice, the victim may be (a) a young infant, the first-born of the family; (b) a criminal or prisoner of war; or (c) a person of special importance in the eyes of the person or tribe offering the sacrifice. In the first case we have, in the majority of instances, a sacrifice of primacy, whereby the firstfruits of the field, of domestic animals, and of the human family were sacrificed to the deity. In the second case the victim has offered against a divine majesty, either by his crimes or by fighting against the people of the divinity; the god has triumphed over his enemies, and their blood is poured out before his feet. In the third case is rather different: the god has to be appeased by his own people; a calamity or plague has to be averted, or some such prize as victory in battle has to be obtained; the most probable gift that the tribe can offer has, therefore, to be presented in payment for the boon; the king's eldest son must be offered as a burnt-offering that there may be 'great wrath' against his enemies (2 K 3:26).

By way of appendix to this article, two points must be considered briefly: (a) the modifications and substitutes offered for human sacrifices; and (b) the strange superstition, not yet wholly extinguished, that the medieval Jews practised a form of ritual murder.

(a) Modifications and substitutes for human sacrifices. — Although, as the notorious case of the Aztecs shows, the practice of human sacrifice is not inconsistent with a high standard of culture, it is natural that the advance of civilization should develop a repugnance against the rite in its crudest form, and that various devices should be invented to satisfy the demands of the gods without actually taking life. There are four such devices that call for mention. (1) The substitution of a model of wax or straw, as we have already seen, was early introduced into Egypt. Small figures of men cut from laminates of bronze and silver were found under the foundation of a house at Gezer, evidently representing the occasional cases of the sacrifice of viles, worthless, or crippled members of the community may also in a sense be a substitution for lives more valuable. Although the dogmatic statements of folk-lorists on such a point cannot be accepted without reserve, it is possible that some children's games (see ERE ii. 395) are the pale reflexion of rites that once involved the human victim. (2) By redemption the eldest son of the Hebrew family was rescued from the doom that doubtless was literally carried out upon them; the cases of sacrificial mutilation and similar irreparable injuries — especially those involving the loss of male virility or female chastity — were devices to preserve life while sacrificing the lower detect. They were also performed, in which all semblance of the victim disappeared. Thus, under the foundations of many houses in Palestinian excavations have been discovered groups of lamps and bowls (usually
HUMAN SACRIFICE (Slavio).—The Baltic Slavs were fanatics and sacrificed Christians to their gods. Every year a Christian was chosen by lot and offered to the god Svarog in his temple (Helmold, Chronicos Slavorum, Frankfort, 1881, p. 316). The head of Bishop John of Mecklenburg was fixed on a lance and offered to the god Veilen (66). In Russia the so-called Chronicle of Nestor, under the year 988, i.e. a short time before Vladimir's conversion to Christianity, tells that this prince sacrificed human victims to the gods. The list of those victims included: a Christian Varag, who refused to give him up. The Russians forced an entrance into his house and slaughtered him and all his family.

HUMAN SACRIFICE (Teutonio).—What Caesar says regarding human sacrifice among the Gauls (de Bell. Gall. vi. 18; 104 pro vita hominis nisi hominis vita reddat, non posses aliter deorum immortu numen placuit arbitratu, publicosque studium generis habent: instituta sacrila') holds good also in the case of the Teutons. As late as the historical period, the latter people, when their own lives were imperilled, or when some threatened disaster was to be averted, offered human beings in sacrifice. They believed that the demons and gods who had a desire for human lives would be satisfied, or their anger appeased, by such immola tions. The human victims of these rites were not as a rule fully privileged members of the particular community; they were prisoners of war, slaves, convicts, or children under age. As times went on, when the community had no such persons at its disposal, and, in particular, in military campaigns or expeditions by sea, the victims were selected by lot. Like all other sacrifices among the Teutons, human sacrifices were regulated by the principle of ad adon. Either they were of a prophylactic character—and from this class sprang the periodic immolations of human lives—or they were performed in fulfilment of vows. They were offered to the demons who caused death, or to the gods of the souls of the departed, or to the gods of the realm of the dead; sometimes, however, the sacrifice was paid to the god of war, as also to the deities of fruitfulness, who were to be thus induced to prevent failure of crops and consequent famine. In process of time human sacrifice was superseded by the sacrifices of animals, or of objects regarded as substitutes for human life.

According to Tacitus (Ierm. 9), all the German tribes offered human sacrifices to Woden-Mercury on certain days. These immolations, however, were accorded not to Woden as the supreme god, but to Woden as the god of death, and were designed to avert a wholesale loss of life. Thus from other references of Tacitus we learn that the Hermundurs, after their victory over the Chatti, offered human lives to the god of death and Mars, the god of war (Ann. xiii. 67). This is confirmed by the Norse record. When King Ann of Upasnl was growing old, he sacrificed nine of his sons to Odin in order that his own life might be prolonged in return (Helmold, op. cit. ed. F. Jonassen, Copenhagen, 1890, I. 45 f.). In the same way, according to the Víkara Saga, Odin bestowed upon his protege, Starkard, a life of three human generations only on condition that Starkard should sacrifice King Vikar to him, and the god himself put into Starkard's hand the spear with which he was to slay the king (Saxo Grammaticus, I. 276). While these examples belong to the sphere of myth, yet they witness to the people's belief that Odin accepted life in exchange for life.

Death holds his harvest in time of war. Hence the Teutons immolated the lives of enemies, especially after a victory. The South Teutonic sources do not usually indicate to whom such sacrifices were offered. Thus, e.g., after the battle of the Cumbrics, after a victory, sacrificed four captives (Strabo, vi. 2. 3); after the battle of Arausio (105 B.C.) the captured Romans were hanged upon trees (Orosius, Hist. vi. 18); the Ten Tribes of West Germany treated their prisoners in the same way after the battle in the Tenbottor Forest (Tac.
HUMAN SACRIFICE (Teutonic)

Ann. i. 81) and similar sacrifices were performed by the Heruli (Procop. de Bell. Got. i. 14), the army of Ariovistus (Cæs. de Bell. Gall. i. 53) and others. Sometimes we find that a vow of human sacrifice was made before a battle. Thus Ruda Pristina, the leader of the Teutons, on the occasion of his expedition into Italy, took a vow that, if he conquered, he would sacrifice the captured Christians (Oros. i. 3. 77). In the Northern seas of life, the gods had announced by lot that he desired such an expiation (Ael. Vita Willibrordi, c. 10; Fries. de saeculis, ed. von Richthofen, Berlin, 1840, p. 323). These immolations were performed upon the seashore; and as far as is known, the Teutons regarded the king as the god who had announced by lot that he desired such an expiation. 

When Jarl Elmar of Orek conquered Harald, he made him choose a sacrifice to Odin in return for his victory (Icelandic Sagas, p. 8: 'gaf hann Ófinn til sigra ær'). When a Norse general came face to face with the enemy, he cried out: 'Ófinn á ytr aila' ('Odin has you all').

But Odin was at the same time the leader, and thus also the god, of the dead, and his dominion was increased by the addition of fallen warriors (sælar) to the company of the Binkarjar. Hence he not seldom selected his own victims. He sent forth his battle tc the Vanir, the Valkyra, to lead, from his kingdom, the heroes who fell in the field of battle. We sometimes even meet with the belief that Odin himself took part in the battle, and secured his destined victims. Thus, e.g., he was present at the great battle of Bravalla, in which King Harald of Denmark fought against Hring of Sweden, and the god himself struck King Harald down (Saxo Gram. i. 390; Nornadassægur, i. 380 f.). Or he gives the adversary of his destined victim a spear with which to slay the latter (Gudbrands Sæg, ed. Ransjö, p. 168 f.). Sometimes, again, men devoted their own lives to the gods. When Eirikr the Victorious, King of Sweden, met his nephew Styrbjorn in battle near Fryxelvall, he dedicated this land to Odin, with the consent of his executory. When Jarl Hakon of Norway joined battle with the Jomsvikings in the bay of Hjorungav (396), and the victory inclined to the side of the latter, he sacrificed his youngest son, Erling, to his protective goddess Thorgerd Holgabréd, and so won the day (Jomsvikingsæg, note Am. 510, p. 38 f.).

Besides war, expeditions at sea were another great source of danger to life. In the sea there lived a mischievous demon whom the North Teutons called Rán ('robber'). Rán, with her nine daughters—personifications of the waves—laid hold of her victims in storms at sea. Those who were drowned passed into her kingdom, and were there regaled with lobster and fish. Hence dwellers by the North Sea, or the ocean, before setting out upon a voyage, offered a human sacrifice, hoping thereby to protect themselves against the rapacity of the sea-demon. The heathen Saxons, before taking ship for home after their marriage and prosperity, slaughtered a tenth of all their captives upon the beach, in order that a safe voyage might be granted to them (C. von Richthofen, Zur Lateinwissenschaft, Berlin, 1865, p. 304). Likewise the Norwegians, when embarking upon their Viking raids by sea, sacrificed human beings to the sea-god (Mém. de la société des antiqu. de la Normandie, xxii. (1869) 129 f.). These sacrifices were performed with the sea-farers who were responsible for a safe voyage, and brought into connexion with the violation of his sanctuary only after he had become the supreme object of worship.

But human sacrifices connected with seafaring were not so decidedly of a prophylactic character as those connected with failure of crops. Failure of crops and the loss of life is not the same thing: but we may have the explanation of the human sacrifices performed in times of threatened scarcity. Thus, during a famine, King Halfric of Denmark, Hearing that the king of Sweden had atoned for having slain his own son, upon whom the lot had fallen, sacrificed King Harald of Fjordgøta and his Retinue (Herusor Sæg, ed. S. Büges, Christiania, 1866, p. 227 f.). Like other races, the Teutons regarded the king as the god responsible for a bad harvest. It is recorded that the Swedes attributed both abundances and scarcity of crops to their kings (Reiskaér, i. 78: 'Svarar eru vanir at kenna konungu bessi ór ok halleri'). Even as late as 1597, we find Gustavus Vasa, at the parliament of Westerka, complaining that the people blamed the king for the lack of crops. It is no wonder that he was regarded with some respect (E. G. Geijer, Svenska Folkteor Hist., Örebro, 1837, i. 71). From heathen times comes the statement that the Swedes sacrificed to the sun god 'pro frugum frugum demors' (Mém. Hist. Nor., Christiania, 1890, p. 98), when neither the immolation of animals nor that of ordinary men had been able to arrest the blight (Reiskaér, i. 207). When the immolation of kings, which among the Teutons gradually disappeared within historic times, was at length finally abandoned, the king who was held accountable for famine was dethroned, or even expelled from the country, as was the practice, e.g., among the Burgundians (Amm. Marcell. xxviii. 5).

The practice of periodical human sacrifice, offered in spring to the deities of fertility, arose from the dread of possible dearth. Such a periodical rite was the sacrifice at the festival of Neowens, which was celebrated every spring by seven tribes on the Baltic Sea (Teut. Germ. 40). At this festival the priest drove the cow of Neurhus—the divine Toru Moter—through the various cantons of the confederacy, in order to secure the fertility of the whole country. Then, when the procession was over, the slaves who had accompanied the cow were sacrificed to the goddess in her sacred lake. Another immolation on a large scale took place every ninth year in the ancient and highly venerated samian, where the residence of the Danish kings was also situated. At this festival likewise the members of the confederacy assembled for a joint-celebration in order that the gods might, along with the sea-farers who were responsible for a good voyage, be assured of a great immolation in which ninety-nine human beings, and an equal number of horses, dogs, and cocks, respectively, were sacrificed. This celebra-
tion took place in winter—the season in which elsewhere the ancient Teston festival of the dead was held—and was designed to benefit the souls of the deceased, and to look after their welfare in the other world. It is not noted in our sources, but was in all probability the early spring. The sacrifice was offered to the god of vegetation. The ancient structures, formed by the Saxo Grammaticus (i, 190), with his euhemeristic mode of explanation, says it was instituted. As in the festival of Nerthus, there was a procession here also, the image of Frey being borne through the district by a young priestess (Platejärnön, i. 327 ff.). Frey, too, received human sacrifices, at least in the later period of heathenism. These sacrifices, like the great immolation at Lethra, were performed every nine years, and were offered in the sacred grove at Upsala, their object being to propitiate the god, i.e. to secure his favour for the people, and fertility for the land. The victims here were not only human beings, but also horses and dogs, nine of each kind being sacrificed. The bodies of the human victims were burnt upon trees in the sacred grove, and the informant of Adam of Bremen (iv. 26-27) says that he had seen seventy-two bodies suspended there.

The ancient immolations with a view to protecting human life and keeping malignant demons at bay. They had a similar purpose in the sacred grove, a practice met with among all races. It is true that the ancient sources supply no evidence of this observance among the Teutons, but the discovery of skeletons in the sacred grove of the Teutons as found by the informants of Adam of Bremen (iv. 26-27) is not without foundation. The Teutons practiced those immolations with a view to protecting human life and keeping malignant demons at bay. They had a similar purpose in the sacred grove, a practice met with among all races.

As a rule the victims in these cases were children. In this particular sacrifice, however, the place of human beings was at an early date supplied by animals (especially cats), or by certain parts of animals (heads of horses, oxen, etc.), and at length by inanimate things (images, coins, etc.). The modern practice of putting in certain objects at the laying of foundation stones is a survival of the ancient rite. In the ancient sacrifice the victims were placed under the threshold of buildings, and under the gateways of city walls, and under the pillars of bridges. Then the dike upon the seacoast, as being specially exposed to the waves, were also protected by human sacrifices. In Oldenburg, children are said to have been thus inhumed as far down as the 17th cent., by way of making the dike secure. L. Strack, Aeglepsia aus dem Hortusvum Oldenburg, Oldenburg, 1806, i. 127 ff.). And even at the present day we meet in many districts with the popular belief that certain structures of huge size could never have come into existence at all unless the builder had buried a human being under their supports. Cf. art. BRIDGES.

FOUNDATION.

Hume. Life.—David Hume, best known for his philosophical writings, was a student of history and economics also. He was born in Edinburgh on 26th April 1711. As his friends tell us in his autobiography, he came of a family of distinction but of small estate. He was the youngest of three children, who were early left fatherless, and had to bear the care of a devoted mother, whose little girl was known in his early education. He entered the University of Edinburgh in 1723. His philosophical and literary bent showed itself early in life, and gave him a triumphing in the end over all other interests. He tried business, but found it unsuitable. In 1734 he went to Paris, and there wrote his T. Treatise of Human Nature, the first and second volumes of which were published in 1739, when he was only twenty-eight years old. He expected much from this his first work, but suffered a great disappointment. It 'fell dead-born from the press.' He was not discouraged, however, but proceeded to write in a more popular form. In 1741 the first volume of his Essays appeared, and gained for him almost immediately the notice he courted. A second volume of Essays followed the next year. In 1744 he had hopes of securing the chair of Moral Philosophy in the University of Edinburgh, but failed. He then secured the post of tutor to the Marquis of Annandale. In 1748 he became secretary to General St. Clair, with whom he remained, with a slight interruption, for two years, continuing his writing. After some time spent at Ninewells, in Berwickshire, he returned to Edinburgh in 1751, where he remained for twelve years. These were the years of his greatest literary activity, in which most of his political, economic, and religious studies were written, together with his History of England. In 1763, in company with Lord Kames, he visited Paris, and was received there with gratifying distinction. He was under-secretary to General Conway in 1767, and spent two years in London. He returned to Edinburgh in 1769, and remained for the rest of his life, enjoying a wide reputation and a substantial income. He died on 26th August 1776. His own description of himself as 'a man of mild dispositions, of command of temper, of an open, social, and cheerful humour, capable of attachment, but little susceptible of ennui, and of great moderation in all my passions,' is likewise the description of him given by those who knew him well. His friendship for Rousseau, which was poorly requited, was characteristic of him. There was in his disposition a mixture of kindliness, a scepticism, half serious and half playful, which prevented for a time a just estimate of his ability. But his reputation has grown with the years, and he ranks among the most acute and penetrating students of human nature.

2. Writings.—

1741-42, Essays Moral and Political, do.

1745, An Enquiry concerning the Principles of Morals, do.

1756-61, Four Dissertations: 'Of the Natural History of Religion'; 'Of the Passions'; 'Of Tragedy'; 'Of the Standard of Taste,' do.

1777, My Own Life, London.

1785, Dialogues concerning Natural Religion, do.

3. Philosophy.—Hume's philosophy is usually regarded as the culmination of the line of thought begun by Locke and continued by Berkeley. There is no doubt that he wrote with the ideas of these predecessors in mind, and fully conscious that he was carrying them forward to their ultimate issue. His philosophy, however, is much more than a development of this issue. The turn given to the result, the conception of human nature, is in the development of it and the consequent
method of conducting inquiry are the really significant things in the work of this Socrataman, who dedicated himself a sceptic. His scepticism is not only a suspicion of his predecessors' philosophy; it is also the recommendation of a positive attitude towards life.

In logical relation to the philosophy of Locke and Berkeley, the philosophy of Hume appears to be the natural and inevitable conclusion of the position they defended in regard to the objects and method of knowledge. Locke (p. 2) had reduced his inquiry into the 'original, certainty, and extent of human knowledge' to three fundamental tenets which he stated as follows: (1) the only immediate objects of knowledge are ideas; (2) all ideas are acquired; and (3) knowledge is a synthesis of ideas, 'the perception of the agreement or disagreement' of them as they are compared and related. Ideas, with Locke, were definitely distinguished from things, on the one hand, and from the mind, on the other hand; they constituted a series of intermediate existences between the mind and the things to which knowledge is supposed to refer. Berkeley (p. e.) had questioned the validity of the distinction between ideas and things; if Locke's fundamental theses are to be maintained. If, that is, knowledge is concerned immediately with ideas, their comparisons and relations; if in both object and method it never passes beyond them, then the distinction between ideas and things becomes unintelligible. Knowledge deals directly with its objects; and, if it is a perception of them and their relations, it is evident that objects are what they are in perception; their esse is percipi. Hume pushes this analysis of Locke's position still further, attacking the distinction between ideas and the mind, just as Berkeley had attacked the distinction between ideas and things. Nothing is given in perception, he urges, except what is perceived, and perception is a mind of them from perception is not given; it is not a datum of experience, an object to be identified among the sum-total of objects perceived. At best it is a group or 'bundle of perceptions' which expands or contracts as perceptions are added or subtracted. In other words, Hume contends that, if we take Locke's fundamental positions rigorously, then we must admit that perceptions—that is, the content immediately given in perception—are our only objects, and knowledge can deal only with relations between objects. This results in the idea that if we pass beyond the perception, either to the objects which they are supposed to represent or to a mind which is supposed to perceive them, it is to take a step which experience does not warrant. Knowledge, as knowledge, is thus rigorously limited to the immediate data of experience, and that means, with Hume, to our perceptions. These data of experience Hume divides into two classes—impressions and ideas—and redes the distinction between them squarely on experience. The clearest statement of the distinction is found in the second section of the 'Enquiry concerning Human Understanding,' entitled, 'Of the Origin of Ideas.'

By the term impression, I mean all our more lively perceptions, when we hear, see, feel, or love, or hate, or will. And impressions are distinguished from ideas, which are the less lively perceptions, of which we are conscious, when we reflect on any of those sensations or movements above mentioned.

Furthermore, all ideas are derived from impressions, but impressions are themselves originals without any discoverable derivation. Ideas are copies, faint reproductions of impressions; and this fact gives us a rule by which to test the soundness of our ideas.

When we entertain any suspicion that a philosophical term is employed to describe a meaning or idea (as is but too frequent), we need but enquire, from what impression is that supposed idea derived? And if it be impossible to assign any, this will serve to confirm our suspicion. By bringing us in a clearer light we may reasonably hope to remove all disputes, which may arise, concerning their nature and reality (ib.)

To this extent Hume subjects such preposterous philosophical ideas as those of space, time, cause, necessary connexion, substance, mind, to find in each case that there is no single distinct impression as the source of the idea. Such ideas must be referred to the grouping of impressions or ideas, or to the passage from one impression to another, or from one idea to another. For instance, the idea of substance is not derived from any distinct impression, but is nothing but a collection of simple ideas, that are united by the imagination, and have a particular name assigned to them by which we are able to recall, either to ourselves or others, that collection (ib., bk. I. pt. iv. sec. i.).

The idea of necessary connexion is not derived from any necessary connexion discoverable among our impressions, but from the feeling attending 'the customary repetition of the imagination from one object to its usual attendant.' And the idea of cause and effect is to be understood, not in terms of any discoverable power by which one thing works a change in some other thing, but in terms of the persistent habit of human nature to expect similar facts to be followed by similar experience.

Thus Hume attempted to abolish the leading ideas of the philosophy of the proposition that by pushing to the extreme the doctrine that, so far as knowledge is concerned, we deal only with perceptions and not with objects, there is no power, no necessary connexion, no substance in which qualities inheres, and no mind which itself perceives, but only perceptions, impressions, and the ideas derived from them, we must interpret mind, power, substance, and necessary connexion solely in terms of impressions and ideas. When so interpreted, they lose the force and significance usually assigned to them. They cease to be principles applicable to things, and become rather principles for the grouping and associating of ideas. Thus Hume gave a great impetus to the scientific psychology, to the view that knowledge is concerned only with original mental elements and their associations.

The result thus reached by Hume he presents to the reader as a recommendation for scepticism. He points out that we naturally tend to reposit faith in our senses and to believe that we perceive external objects, whereas philosophy teaches us that we perceive only perceptions which we suppose to refer to objects or represent them. Of this supposition, we have no proof; our perceptions being perceptions and nothing more, never give any indication of external objects. Confined thus to our perceptions, reason can never pass beyond them, and we are forced to doubt the soundness of any conclusions which attempt to carry us beyond (see Human Nature, bk. I. pt. iv., particularly sections i., ii., vi., and vii.).

Hume's reasoning here is so manifestly based upon the assumption that perceptions are not objects—one of Locke's fundamental assumptions, which he has himself declared to be really unintelligible—that it is difficult to follow him seriously. He appears to be playing with the issue to which he has reduced the philosophy of his predecessors. But in another connexion he gives the most serious and important turn to his scepticism, namely, in his doctrine of belief. 'We may well ask,' he states, 'What causes induce us to believe in the existence of body,' but 'it is vain to ask, Whether there be body or not?' (ib., bk. I. pt. iv. sec. ii.). This statement may be generalised to indicate how with Hume the problem of belief is more important than the problem of knowledge.

To his mind philosophers had busied themselves,
too much with the question whether the things in which we naturally believe, such as an external world, power, God, providence, exist—a question which cannot be answered, because, in order to answer it, we should have to pass beyond the limitations which experience puts upon the problem of existence. There is no way of proving that that which we take for granted is not mere delusion. It is, therefore, idle to try. But, since we believe in spite of this fact, the grounds of our belief may be investigated. In every case, Hume reduces belief to some principle of human nature, to some habit or propensity of mind, just as he reduces the belief in necessary connection to the feeling attending the inseparable union of similar consequences from similar events. He defines belief generally as 'a lively idea related to or associated with a present impression.' His comment on this definition is not only a clarification of it, but a good illustration of his philosophical position generally.

'When we infer the existence of an object from that of others, some object must always be present either to the memory or sense, in order to be the foundation of our reasoning; since the farther we go from the objects of this present moment, either by time or space, we are not determin'd by reason, but by custom or a principle of association.' A belief is somewhat mystified in this passage. It is not a particular manner of forming an idea. And as the same idea can be formed by a variation of the degrees of force and vivacity; it follows upon the whole, that belief is a lively idea produced by a relation to a present impression, according to the foregoing definition (6. bk. 1, pt. 3, sec. 1v).

Then there is a kind of inevitableness about belief; it is the necessary result of putting the mind in certain natural postures. 'It is not a problem of scepticism, although it triumphs over reason and every attempt to establish by reason the objects of belief, is relatively impotent in the face of belief itself.' No. He means here Hume means genuine human nature—'will always maintain her rights, and prevail in the end over any abstract reasoning whatsoever.'

'The natural history of human nature rather than on proved conclusions of reason, however, was for Hume not the end of philosophy. It suggested to him a science of human nature which should set forth a detail the ways in which men act and in which they come to believe in any matter of fact. Such things are with him the proper objects of philosophical inquiry. Only the means are necessary to them should be carefully noted. The sub-title to his Treatise of Human Nature indicated what he conceived that method to be: an attempt to state the experiments, the method of reasoning into moral subjects. That is, problems concerning man's beliefs and conduct are to be handled by observing how men behave under given conditions, and what actuates and moves them. Above all, the effects of probable conclusions based on observed uniformities, sequences, and expectations are to be emphasized. For probability rather than certain conclusions is the great guide in human life. This method has already been illustrated in the foregoing exposition. A further and significant illustration of it is found in Hume's theory of morals.'

'Those who affirm,' he says, 'that virtue is nothing but a convention to prevent us from doing the unnatural, and what is the same to every rational being that considers them; that the immutable measures of right and wrong impose an obligation, not only on human creatures, but also on the Deity itself: All these systems concur in the opinion, that morality, like truth, is discovered virtually by ideas, and by their just position and comparison. In order, therefore, to determine these systems, we need only consider, whether it is possible, from reason alone, to distinguish between moral good and evil, or whether the moral consciousness or other principles to enable us to make that distinction' (6. bk. 3, pt. 1, sec. 1v).

His own opinion is that, tested by experience, it is not reason alone that enables us to make the distinctions. Morals are not produced by reason or prevent actions. Reason of itself is utterly impotent in this particular. The rules of morality, therefore, are not the conclusions of our reason. They are conclusions from feeling and sentiment. 'Morality is more properly felt than judged of.'

Again: 'Virtue is distinguished by the pleasure, and vice by the pain, that any action, sentiment, or character gives rise to. There is no particular view and contemplation. This decision is very commodious; because it reduces us to this simple principle, which is the common or sentiment upon the general view or survey gives a certain satisfaction or unsatisfaction, in order to show the origin of the moral rectitude or depravity, without looking for any incomprehensible relations and qualities, which never did exist in nature, nor even in our imagination, by any clear and distinct conception. I flatter myself I have executed a great part of my present design by a statement of the question, which appears to me so free from ambiguity and obscurity' (6. bk. 3, pt. 1, sec. 2v).

Thus we are brought to look for the springs of moral action, not in reason, but in a natural quality or disposition of human nature—the disposition to approve or disapprove actions as they affect us with a favourable or unfavourable view of the person acting, as they lead us to sympathetic with him and his motives. Hume's theory of morals is thus neither hocus-pocus nor egotism primarily. It is not essentially utilitarian, although considerations of utility are important for him. It is rather an attempt to show that moral actions are pre-rational, finding their origin in the emotions rather than in calculation. His theory is introduced by an elaborate and interesting study of the emotions themselves.

Hume's method of dealing with religion is the same as his method of dealing with morals. His Natural History of Religion opens with these words: 'As every enquiry, which regards religion, is of the utmost importance, there are two questions in particular, which challenge our attention, to wit, that concerning its foundation in general; and that concerning its origin in human nature. Here, again, is the sharp contrast between reason and human nature. Hume, indeed, admits that there is rational ground for the primary principles of genuine theism, such as an intelligent author of the whole frame of Nature, but insists that what the majority of men believe about God is not founded on reason. The latter has a natural history which he attempts, with very insufficient data, to trace. Religion, according to him, began, as polytheism, and arose 'not from a contemplation of the works of nature, but from a concern with regard to the events of life, and from the incessant hopes and fears which animate the human mind.' These hopes and fears have led men to the worship of many corresponding deities. The passage from polytheism to theism was brought about, not so much by any train of philosophical reasoning, as by a tendency to idealize the conception of Deity. There results a 'kind of flux and reflux in the human mind,' and 'men have a natural tendency to rise from idolatry to theism, and to sink again from theism into idolatry.' If religion had its origin in reason, such a flux and reflux would be impossible. Throughout this discussion of the natural history of religion, Hume lays little stress on the validity of religious belief. It is with him a characteristic belief of human nature, like belief in causation or in an external world.

The problem of validity is, however, discussed in his Dialogues concerning Natural Religion. A supernaturalist, a deist, and a sceptic are the protagonists in the discussion. The arguments of each are stated with much acuteness. The principal point in dispute is not the existence of God, but how far we can, by reasoning from the character of the world, the events of history, the good and evil fortunes of men, reach sound conclusions about God's nature and attributes. Are we entitled to infer any greater good from the conduct of the author of the world than we find exhibited in the
HUMILITY

world? Can we infer a providential guidance of the course of events, in the face of the fact that a special care for one man's good is bound up with another man's evil? The outcome is inconclusive, bedeviling doubts, the literary demands of the dialogue rather than illustrating Hume's own convictions. He does not hesitate, however, to betray his own preference for the sceptic's position. The subject passes the power of human reason to decide. Arguments balance one another. His closing statement is perhaps the expression of his own attitude:

'If the whole of Natural Theology, as some people seem to maintain, resolves itself into one simple, though somewhat ambiguous, at least undefined proposition, That the cause or causes of order in the universe probably bear some remote analogy to the operation of a design, this proposition be not impugned. The extension, variation, or more particular application: If it affords no inference that affects human life, or can be the source of any action or forbearance: And if the analogy, imperfect as it is, can be carried no farther than to the human intelligence; and cannot be transferred, with any appearance of probability, to the qualities of the mind: If this really be the case, what can be the most inspective, contemplative, and religious man do more than give a plain, philosophical assent to the proposition, as often as it occurs; and believe that the arguments, on which it is grounded, exceed the objections, which lie against it? Some astonishment indeed will naturally arise from the greatness of the distinction between the man and his reasoning: some contempt of human reason, that it can give no solution more satisfying than to an extraordinary and marvellous question. But believes me, Cavendish, the most natural sentiment of the just-disposed mind will tend on this occasion to a longing desire and expectation, that heaven would be pleased to dispel it; at least alleviate this profound ignorance, by affording man, through a particular revelation, and manifest, and miraculous discoveries of the nature, attributes, and operations of the Deity, to which he himself bats. A person, seasoned with just sense of the imperfections of natural reason, will fly to revealed truth with the greatest avidity; While the haughty Dugdale, persuaded that he can erect a complete system of Theology by the mere help of philosophy, disdain any further aid, and rejects this advensions instructor. To be a philosopher sceptic is, in a man of letters, the first and most essential step towards being a sound, believing Christian; a proposition which I would willingly recommend to the attention of Philosophers and Churchmen. A speculative Christian will forgive me for interpreting so far in the education and instruction of his pupil.'

It should be noted, in conclusion, that Hume wrote also many essays on socio-political topics, which, however, have little historical importance. His History of England was a partisan document, based on an inadequate knowledge of the facts. It is significant, however, for its emphasis upon the social and literary interests of the nation as of equal importance with its political affairs.

HUMILITY.—The Greek word ἦμιλτην is one of those which, like ἀρεσκεία, have been rescued and ennobled by Christian ethics (see Trench, Synonymes of Bart., Camb., 1854, p. 321.; T. K. Abbott, in ICC [Edin. 1897] on Eph 4; cf. art. 'Humility,' in HDB).

Humility is an essential Christian grace, and divides the religion of Christ from that of paganism. For Christians to walk 'worthily' of their vocation is to walk 'in lowliness and meekness' (Eph 4:2).

Paganism was not humble, because to paganism the true God was but a name. The whole life and thought of the pagans was materialism, which was more naturally based on facts. In literature, its governments, its religious institutions, its social organization and hierarchy, its doctrines about human life and human destiny—truths were based on the principle of a boundless self-assertion (Liddon, Ec., p. 600).

In the later Stoicism, self-reliance reaches its climax in 'the deification of human virtue, the total absence of all sense of sin, the proud stabtom will that deemed humiliation the worst of stains' (Lecky, Hist. of Europ. Morals, London, 1879, i. 325; cf. Aristotle, Rhet. i. 17; where humility appears as a consciousness of weaknes, disqualifying a man for the higher spiritual rank). It is true that even in Aristotle's conception of the soul there may possibly be discerned some elements of good: truthfulness of character and speech, magnanimity in overlooking offences, self-respect and independence to death (Et. Nic. i. 4, § 24 ff.). But it remains true on the whole that the highest and most inclusive type of human virtue is essentially an exalted form of self-esteem, implying contempt of others. The ἐκμυσθήσθαι is & μάρτυρα υπὲρ ἑαυτοῦ ἐγνόει & in. In the classical conception of virtue there is, in fact, 'an element of worldly wisdom which does not exclude self-righteousness.' To a heathen the only check upon pride was the prudential consideration that the gods were envious of undue prosperity and hostile to inverte (δογματικοὶ) and self-effacement. This is, of course, a commonplace of the Greek tragedians. A Greek might have assented to the maxim laid down by St. Paul in Ro 12:3 (αὐτοκρατορία καὶ δικαιοσύνη), but he later succumbed to a real confusion of mind, a real ignorance, as to the actual condition and true possibilities of human nature. In the gospel, humility is the natural fruit of the deepened insight into the true life, discovered through the contemplation of God, and of the personal example exhibited in the incarnate life. 'The spirit of God's majesty,' says Harnack, 'is the spirit of lowliness and meekness, an actual participation in the Spirit of Jesus Christ, not in the pomp of arrogance or pride, though He might have done so, but in lowliness of mind (ρεκλησίας). Here we have the true key to the change which Christianity produced in man's estimate of himself. It may be added that 'magnanimity' ranks as a genuine Christian virtue; it is, however, identical with humility, though quite compatible with it. Aquinas regards it as a species of fortitude (Som. ii. 2. qu. xxix. art. 1).

In the NT, humility seems to be considered under two main aspects.

(1) As a personal virtue.—From this point of view humility is that fundamental quality which places man in the only right relation to God. Humility, says Aquinas, 'strictly speaking, implies the reverence whereby man subjects himself to God as his creator and redeemer; it is the recognition that humility is the victory of truth in character; that just self-estimate which, while not depreciating personal gifts or excellence, always refers them to God as their true and only source. This just self-estimate includes both the sense of creaturely limitations and the consciousness of personal weakness and sinfulness. Humilitas fuit quod homo se tammet eum, se secundum conditionem suam proprio defectus' (Som. ii. 2. qu. xxix. art. 3 ad 4).

Humility is thus the initial grace of the Christian life. Its fundamental place in character is taught by Christ in the first Beatitudes (Mt 5:3); and also in the injunction of Mt 6, Mk 10, Lk 18. It implies the 'acknowledgment of God' and of what man really is in His sight, and thus includes: (a) the spirit of creaturely dependence and service. Our Lord's great humility was manifested in his assumption of the 'form of a servant,' as contrasted with the glory and sovereignty of His original and essential state as Son of God (Phil 2); see Corn. and lap. ad loc. and cf. Joh. Domas and orth. Fd. iii. 21). Further, in virtue of the union of His human nature with Deity, He who is one
with the Author and Giver of all spiritual blessings became Himself a receiver, inferior to the Father 'as touching his manhood' and dependent upon Him for all that was needed to sustain His manhood, to equip it for its redemptive work, and to advance its condition (see Hooker, Eccl. Pol., ch. viii. § 14, note). The unique characteristic of the Christian faith is the mystery of this self-humiliation; the fact that the pattern of humility is nothing lower or less than the incarnate life of the Son of God. Humility, then, in its primary sense is the spirit of perfect dependence on God.

3. Humility is the spirit which, apart from any pride or puerile vanity, is the root of the man who wants God. Nor can beatitude have any other beginning (Serm. Dom. in sancta, i. 5). Pride or self-assertion is the root of sin; the beginning of wisdom is the fear which springs from the sense of personal unworthiness. Thus Bernard calls self-knowledge the key-stone of the Church (Ep. 1xvi. 13, 14). He here produces a 'mater salutis' (in Cant. xxxvii. 1). Humility is the essence of a true conversion; it is the indispensable act of spiritual growth (see Ps. 50:3); it is the gate by which the grace already bestowed on the soul may be lost by pride.

This has never been more forcibly expressed than in a famous passage of Augustine (Conf. x, 17) where he describes himself as one who did not wish to be found among the multitude who submit himself wholly and without reserve to the yoke of Christ, and who, no other road to the attainment of truth than that which was trodden by Him who, as God, saw the infirmity of our steps. And that road is first humility, secondly humility, thirdly humility, and so on as often as I was asked about the proper beginning, I was wont to advise that one should choose to answer nothing else but "Humility," though perhaps it would not compel me to say other things." (b) Holy fear or the sense of sin. —'The poor in spirit,' says Augustine, 'are the humble and those who fear God. Nor can beatitude have any other beginning (Serm. Dom. in sancta, i. 5). Pride or self-assertion is the root of sin; the beginning of wisdom is the fear which springs from the sense of personal unworthiness. Thus Bernard calls self-knowledge the key-stone of the Church (Ep. 1xvi. 13, 14). He here produces a 'mater salutis' (in Cant. xxxvii. 1). Humility is the essence of a true conversion; it is the indispensable act of spiritual growth (see Ps. 50:3); it is the gate by which the grace already bestowed on the soul may be lost by pride.

On the other hand, humility is commended in the NT as a social virtue, as, for instance, in Ph 2:11. Humility is a form of moderation (cf. Sum. ii. 2, q. cixi. art. 4). The point enforced by Christ's example in Ph 2 is that He did not insist upon rights which He might in strict justice have claimed. St. Paul implies that the desire for superiority, vainglory, and the spirit of partisanship are foreign to the well-being of the community (Ro 15:5; Eph 4:1, 2; 2:9). It excludes the envy which springs from comparing self with others (2 Cor 10:12); it encourages the spirit of contentment and self-denial. The humble man will constantly recognize that any gift which gives him superiority over his fellows is a measure due to the good influence of others—parents, friends, teachers, even enemies who have dealt candidly with his defects; and, further, 'so far from wishing to keep his virtues to himself he will that they were common as the air of heaven, that all the Lord's people were prophets.' Thus humility is a social virtue and may be regarded as an aspect of benevolence (Bashall, The Theory of Good and Evil, 1. 206). Hence in the interests of peace, whether in the family or the Church, the NT frequently insists on the duty of mutual subjection. Ph 2:15 further, as one great secret of effective social service is patient study of the conditions of each problem that needs solution, the teachable or humble temper, as it is termed, is the spirit which is willing to learn and observe before taking action. Bernard's observation is here in point, that the Church reserves its reservoirs rather than pipes (Canons hodis in Ezech. multo hominibus, conchas vero perennis). 'Men,' he complains, 'are nowa-days so full of charity that they wish to pour out before they are full; they are more ready to speak than to hear, and eager to teach what they have not learned' (cs. cit. xxviii. 23). For the spirit needed in dealing with modern social problems is a spirit of humility, willing to put itself to school with facts, and not to pride itself even in its most obvious success (artus inventendi cum inventis adolescentes pozas).

2. The acts or offices of humility must necessarily vary with the particular states and conditions of men. The Benedictine rule, with its 'seven grades' of humility, is briefly discussed by Aquinas (Sum. ii. 2, q. cli. art. 6; see also the last book of Cæsarius, Inst., de Superbia). In ordinary life the grace of humility takes such forms as are described by Jeremy Taylor (Holy Living, ch. ii. § 4). It is specially tested in a man's life with his equals.

The hardest trial of humility must be not towards a person to whom you are superior, and who acknowledges that superiority, but towards a person with whom you are on equal footing of composition. . . . The relation to equals is thus the more real trial of humility than the relations to inferiors (Moles' Univ. Serm., London, 1714, i. 'Our Duty to Equals,' p. 220).

3. It may be noticed, in conclusion, that some clear principles connected with our subject emerge in our Lord's teaching and produce human experience. —(1) Docility or receptiveness—The temper of the child is a necessary condition of spiritual growth as of mental growth (see 1 Th 4:1).

(2) The spirit of dependence is the condition of spiritual fruitfulness (Jn 15:5). The Christian ideal is not self-reliance, but unlimited confidence in the goodwill and co-operating grace of God at every stage of moral and spiritual progress. The Christian echoes St. Paul's confession: I can do all things through Christ who strengthens me (Phil 4:13).

(3) Humility is the key of exaltation (Lk 18:14).

This is a saying of very wide scope. The supreme illustration of its meaning is seen in the Passion and Resurrection of Christ Himself. The consciousness of all real excellence is a just estimate by man of his own capacity, and of the greatness of the object at which he aims. The condition of acquiring the capacity to rule is service (Mt 20:28). The hope of progress lies in that self-satisfaction and habit of separation which is the negation of pride (Ro 12:3). Christianity, in fact, is the opposite of self-satisfaction (Penet. pt. ii. art. 4), combines what had hitherto seemed contrary: greatness of character and humility. —(4) The principle implied in Lk 16:15 and in 1 Cor 4:6—the principle that seeks a man is in God's sight, that and nothing else he is. Humility implies a constant sense of the possible reversal of all human judgment. Hence humility is closely allied to Christian simplicity or single-mindedness, which aims simply at pleasing God (Ro 8:5, 1 Cor 7:31, 1 Th 4:4), which strikes after a goodness such as God can accept (2 Cor 9:9), and which recognizes everywhere the presence of an unseen Lord who searches the heart. So Augustine describes the ideal righteous man as being one who 'Deum tentat et peccat;'—one who seeks God and sins in his search for him. 1

1 Cf. Husserl's maxim: 'Science seems to me to teach in the highest and strongest manner the great truth which is embodied in the Christian conception of eternal succor and the realization of God. Sit down before facts as a little child, follow humbly, and never make haste, or you shall learn nothing' (Letter to C. Klages, Life and Letters, ed. L. Husserl, London, 1893, p. 129).
Humour.—The quality of humour shares in the mystery which attaches to all forms of human emotion. In its genuine manifestations it is, as spontaneous as laughter, and as ineluctable. It mocks all attempts at definition. We can see it, possess it, and enjoy it, but cannot say with definiteness what it is.

The word itself has had a changeful history. Starting with the significance of moisture or fluid, it was employed in pre-scientific medicine to describe what were regarded as the four principal humours or fluids of the human body, viz. blood, choler, phlegm, and melancholy. It then came to denote a passing disposition, a transient mood or temper, because these were supposed to originate from the condition of the humours. When the mood was permanent or characteristic, it indicated what we call an eccentricity. To Dr. Johnson a humorist was 'a man with odd conceits,' and to Goldsmith 'an eccentric fellow.' In modern usage, humour is generally restricted to the sense of the ludicrous, or that power in man which enables him to see and enjoy what is amusing. (There are some grounds for suspecting that some of the dumb animals are not entirely destitute of it.)

The common opinion among modern psychologists is that the perception of the incongruous and the inconsistent, is the cause or source of humour. It is, in part, a reaction to the shock of surprise and the world's first knowledge of the absurd, and a protest against the outraged sense of proportion and of the faculties of quick observation and comparison. It involves a certain detachment from or superiority to the disturbing experiences of life. It appreciates the whimsicalities and contradictions of life, recognises the existence of what is unexpected and absurd, and extracts joy out of what might be a cause of sadness. It acts as a check to one-sided views of life, and champions the ideas of 'common sense' against the visionary aims of the idealist. It is counter to its character. It is 'essentially the gift of rising above the interest with which we (and others) may be engaged and reducing it to its limited importance, or even to its proper insignificance, in the great whole of things in which it is a part' (E. Caird, CR liii. [1886] 818). Again, it sometimes exaggerates one special feature, or characteristic (as in caricature), so that it appears absurd, because out of relation to the whole to which it belongs; or it creates amusement by bringing into a temporary union ideas and things which do not belong to the same category. Bergson finds the source of the incongruity in the rigidity, automatism, or distraction to which we are liable, and which hinders us from adapting ourselves quickly to different situations, or from moulding our actions in swift accordance with the varying demands of changeful life. The contrast between the ideal and the real, between the apparent dignity of man and the situations in which he sometimes finds himself, between the high aims which he sets before him and the poor measure of his attainment, the linking together of things and ideas which are essentially different—these are the perennial fountains of humour. The humourist, perceiving in the world's life, and the more sudden the perception of it, the more intense is the emotion which is produced. Humour then relieves itself in an explosion of laughter. The element of surprise is an almost necessary adjunct of humour. Not infrequently the contrast involves some incongruity. It is this fact that places humour as a weapon in the hands of the reformer.

Humour and wit are closely allied. In general they find their subjects in the same sphere, but they use them differently. Humour is kindly, and in its genuine forms includes the quality of sympathy; wit is sharper and more sarcastic. Wit is a flash, humour is a genial glow; wit is intense, humour is relaxing. Qualities of feeling predominated in humour, in wit qualities of intellect. The boundaries of the two are somewhat indeterminate. The pleasure which humour evokes is more genial than that to which wit gives rise.

Humour assumes many forms: verbal humour, the humour of the situation, the banter, the practical joke, satiric humour, sardonic humour, and so on.

The sense of humour is universally desired, and is highly valued. No one will readily acknowledge that he does not have it. Without it man is scarcely human. It is a means of self-criticism, and saves from the folly of self-importance and the sin of self-righteousness. Personal vanity or pride cannot survive the possession of this self-corrector. It is a protection against excess; it fosters humility, and yet lessens the bitterness of failure and blundering. It softens the angularities of individual character and social life, and compounds our errors and our judgments. It carries with it a tolerance which makes it a foundation of good fellowship. It is essentially a social quality, and postulates an absorbing interest in life. The cynic may live alone; the humorist delights in company. The cynic may be a pessimist, but pessimism is impossible to the humorist. In spite of his tendency to poke fun at the ridiculous, he never laughs at himself, and laugh at failure, he yet believes in the ideal. Humour tends to keep the heart young. As a criticism of social life and character it is invincible and invaluable. Humour is the invariable foe of convention, and loves to make fun of Mme. Grundy and all who follow in her train. It keeps social life from falling into ruts or from staying there when it does so. Many abuses which resist the combined assaults of reason, argument, and denunciation yield to the genial onslaught of humour, and fly before it like an arrow.

Humour is an almost necessary quality in the reformer. Luther owed much of his success to his possession of it. It was also a prominent characteristic of Lincoln. The fanatic is destitute of it, and this may account for the fact that he generally fails. Humour of itself does not reform; it is only a force that weakens the strength of what is to be changed, and prepares the way for the reform.

But, apart from its practical influences on conduct and society, it adds a joy to life without which life would be dull and poor. It is a relaxation and a delight to step aside for a moment from the sober, grey, and solemn world, where reason and order rule, into a realm where the whimsical, the incongruous, and the absurd hold sway, and summon us to laughter or play. Those also are part and parcel of the life of the world. Some of the world's greatest benefactors have been its humorists. They brighten with a touch of fun the horizon of life, which is often dark and dismal. The humourist tries to make life a gladsome thing. Even Dante named his great work the Divine Comedy, because he believed in a happy ending to the story of the world's life, and the more sudden the perception of it, the more intense is the emotion which is produced. Humour then relieves itself in an explosion of laughter. The element of surprise is an almost necessary adjunct of humour.
and that a true artist in the one was also a true artist in the other.

But humour, like many of the powers and qualities which are capable of evil as well as of good, has a tendency to coarseness and even obscenity. Many of the humorous stories of the writers of the Turkic society are coarse and even lewd. Humour is often unrefined, and hurtful to the finer aspects of the emotional and spiritual life. The dreams which men cherish of higher and better things are always under its mocking touch. They may be called ‘quixotic,’ but ‘by these things men live, and wholly therein is the life of (the) spirit’ (Is 58:11). It may weaken the pursuit of a high ideal, because it sees the apparent futility of effort towards it. It may lead to the neglect of the more serious and noble side of life, and in its degradation and lowering of moral standards and experiences serve as subjects for laughter. Those who possess the sense of humour in a high degree are always in danger of being carried away by it.

As to other religious tenets of the Hungarians, we know very little indeed. They had no elaborate system of theology, and the triumphant Christianity of the 11th century passed severe laws for the abolition of their rites, their hymns, and even their places of worship. We know that they had a belief in a life beyond the grave. At the burial of their warriors they took care that their horses and dogs should be interred with them. They also thought that if a battle was fought by a Hungarian was bound to serve the Hungarian hero after his death. They held firmly that the highest god loved the warriors and the virgins with which he could endow a man was bravery.

The priests of the Hungarians were called tátos (or Sztóas), wise men. The sacrifices, said the simple prayers, sang of the great deeds of heroes. They resembled the Welsh bard somewhat; but they had less religious strength than the bard. The winds of the old heathen religion of the Hungarians.

Among the modern Hungarians, fairies (tender, apparitions) are, in older tradition, subject to a goddess named Furuzsina, and live in a far-away land of matchless beauty, though they still have mansions in this world (especially mountain castles) till vexed by mankind. They often entice away mortals whom they love. Fate-telling fairies (usually three, but also seven or nine in number) are also prominent figures in Hungarian folklore, dwelling near a spring, well, or brook. These fates are usually considered beneficent. Other fairies dwell in lakes and rivers, and there are, besides, mermen (vesi emberek) and mermaids, of an often love-unions with human beings. Many springs are regarded as holy, and drought follows if stones are thrown into them, while folk-stories often retain traces of the wide-spread belief in the magic properties of water. Giants and dwarfs figure in popular belief; the former are, in general, kindly, and in their wonderfully beautiful palaces they live lives of model bliss and prosperity. Unlike giants generally, the Hungarian giants are wise, and are particularly distinguished by the fact that they keep their strength in a vat in the seventh cellar of their palaces, taking with them only what they may require. The chief function of dwarfs is to guard treasures; but they take their third owner (they can be sold by one man to another) to hell. Obvious traces of an early fire-worship have survived, especially about the time of the summer solstice. The children of the ‘wind-mother’ (Szélnanya) or the subjects of the ‘wind-king’ (Szélkirály) and apotropaic is often called ‘wind-locks’ (szélnyű).

Generally speaking, however, the belief in disease-demons is rather attenuated among the modern Hungarians. In regard to Hungarian ideas concerning fate, it is noteworthy that the old term for casting lots is nyílom, to shoot an arrow.
HUNTING AND FISHING.

Before the fates have decided the future of a child, witches may decree it an evil destiny, though this may sometimes be ameliorated. The life of each man is predestined, but, if at midnight one throws gold coins away at a cross-road, he who picks them up innumerable to the others as many years as he takes coins. Traces of foundation sacrifice still persist, the heads of horses or dogs, or the bones of a raven or black cock, being buried in the foundation of the building.

The dog and the wolf were sacred animals to the ancient Hungarians, who made oath by them. After death shepherds and horse-keepers who have suffered wrong during life, as well as those who have been brought to harm by perjury of others, are transformed into wolves, horses, and dogs respectively; and in these forms, they obtain retribution for the injustice done them.

Folk-heroes are numerous, and whatsoever has appertained to, or come in contact with, the dead has magic potency, which may be used either for beneficent or for maleficent purposes; while the hair, blood, etc., of another gives him or her who secretly obtains it power over its original owner. There is a firm belief in witchcraft and sorceries, etc., part of which may be borrowed from neighbouring peoples, but much of which may equally well be an inheritance from the pagan period.

HUNTING AND FISHING. — In the history of culture the hunter as a representative of a stage of development in human progress stands between the hunter and the agriculturist, who depends entirely upon the provision of Nature for the roots, fruits, eggs, insects, etc., which he gathers while making no effort to ensure his food supply in the future, and the herdsman whose means of livelihood are his flocks or herds of domesticated animals. By a hunting community must be understood one in which the principal source of food supply to the community is the flesh of wild animals killed or taken in the chase. In an early stage of social development, such a community will continue to employ the methods of the collector for vegetable food. The Tasmanians did not practice agriculture to a certain extent, the cultivation of the ground being left to the women. Further, although hunting and fishing may no longer constitute the characteristic industry of a community, and may cease to be regarded as a sport, as in dynastic Egypt and other countries of high civilization such as Persia and India, the methods of the primitive hunter survive, and in many cases are the principal or only means of providing a supply of animal food. Throughout the greater part of Africa the peoples, according to the character of their environment, are either agrarian hunters or herdsmen; but, as they do not, as a rule, eat their cattle, they are compelled to rely upon the chase for fresh meat. It is not uncommon in such cases for the hunting community, trained, as it is, by nature, to hunt the Congo, where men are chosen to lead hunting expeditions on account of their special skill, or in Upper or Lower Uganda, trained to the chase from an early age, who do nothing else.

In a hunting community, the conditions of life are not such as to favor either a high standard of, or progress in, culture. Climatic conditions, as a rule, are such as either to absorb the whole time and energy of the people in the provision of the Tundra region of Asia, and in the extreme north and south of America, or so little effort is required to secure a livelihood, as in the Congo, that it affords no stimulus to advancement. An almost equally effective check on progress is the migratory character of the hunting community, necessitated either by the seasonal movement of the game or by its scarcity. As a consequence, habitations are usually of a flimsy and temporary character, except where the rigour of the climatic demands protection and shelter in the interior. The number of individuals forming the group is comparatively small, because a wide extent of country is required for the support of each member; and social organization is loose, because the solitary hunter has not yet learned to appreciate the advantage of cooperation and subordination. Authority, in so far as it exists, is exercised by the old men or leaders to centre in the skilled hunter.

The natives of Australia, when on their hunting expeditions, erected shelters of interwoven boughs, and, although it is not correct to say of all the tribes that they erected no permanent habitations, some of them, especially in the settled regions, lived in huts which were little more than windbreaks. The Bushmen wandered about in small groups; they made no chief, and their habitations were seen as mere coverings from the boughs of trees. Among the Andaman Islanders the sites of the encampments were determined largely by their fitness for the chase, and of game and fishing; of their three types of habitations, the temporary shelter, consisting of a frame of poles covered with palm-leaves, was usually in two at one time the only type; it was in this type of shelter that the whole group numbered from thirty to sixty individuals. The Negritos of Central Africa, in the rock dwellings, the Malay Peninsula, and the nomadic Aeta (Philippines) may be mentioned as further examples of the primitive culture and social organization of the still hunting groups in the world. In America the tribes were all hunters and fishers, with the exception of the tribes of the south-west, but exhibited considerable variety in culture and social organization. Many practical agriculturists among the Chaco, the Northwest, and the eastern part of the southern Andes, practised agriculture and herding. The Shoshoni had a very loose social organization and an almost complete absence of ceremonial. The Yuma and Shoshoni of California were both at a very low stage in culture, the latter ate their food for the most part raw, had no domestic animals except dogs. The former also practised agriculture, and the buffalo was the chief staple of food and material of industry. Here the social organization was of a more stable and closely woven character, and the chiefship was acquired by merit; this was no doubt due to some extent to the fact that there was a great deal of competition in hunting the buffalo required concerted action and subordination. The Algougues and the northern woodlands practised agriculture and herding, and evolved a highly organized machinery of government. In South America, the Awakas of Guiana, the Tapuyos and more of Brazil, the Tehuelches, and the Quechua — to mention instances only — are nomads with a loose tribal organization and a low type of culture, and are, for the most part, ignorant of agriculture. The Eskimos afford a typical example of a nomad community which draws its means of existence almost entirely from the animal world, and varies its location, methods, and objects of pursuit in accordance with the changing seasons. In Africa, however, where hunting and fishing are universal, even the tribes which may be described as pastoral, i.e., having a large extent abandoned nomadic habits through the additional necessities of cereal cultivation, still retain dependence on their women. To the nomad herdsmen and the agriculturists of East Africa, hunting is merely an additional means of subsistence, and is entered on by the whole population of Uganda, partly as a sport, partly through the desire for meat as a supplement to the ordinary diet.

Although the culture of the hunter is, speaking generally, of a rude type, the implements and weapons which are the tools of the craft are either in their earlier stages, or more interesting to the ethnologist, or of great importance to the naturalist.
HUNTING AND FISHING

indicate a remarkable capacity to adapt himself to his environment, and, within the limits of the available materials, to construct for himself the means most suitable for the attainment of his end.

The use of the bow and arrow is almost universal, the blunted bone being employed in many localities for killing birds. This weapon, however, is not found in Australia or in most parts of the Pacific, except occasionally as a toy. Knives occur in a variety of forms as well as spears. It is, however, in the weapons of a more restricted distribution, devised to meet special circumstances, that the ingenuity and adaptability of the primitive hunter have been most strikingly displayed; as, for instance, in the case of the harpoon, of which the essential feature is that the head should come apart from the shaft and so be supplied with vegetable food; in the arrows of some of the bird-catching peoples, to mark its position in water, or hammer its escape on land. The blowpipe, used with light poisoned darts, which is found in South-East Peninsula of Australia, and in the forest regions of South America, and was at one time used in parts of the southern United States, is another example of a weapon admirably adapted to meet special conditions, and especially fitted for use in killing small birds and monkeys in a dense forest country.

It is, however, in digging weapons that primitive man shows this peculiarly acute quality of mind. The methods and devices used in hunting, trapping, and fishing show a capacity for close observation of the habits of the animal, and for the supply of vegetable food: in each case, the process is one of simple collection.

Recent advances in the study of the nature of animal food do not differ materially from the earliest methods by which a primitive community procures them. The collection of insects, grubs, or birds' eggs, especially sea birds' eggs, involved as a rule no special measures. Sometimes the place the sea-bird or the eggs were in the nets or by the seashore, where they were gathered by the inhabitants of the minnows. Occasionally the European and Australians on land, and aquatic birds, obtained exclusively by women digging. The Eskimos of Alaska have been known to catch a man simply by the hands as it tried to escape across the ice. The Australian women catch frogs, mudfish, and the like, under the ice of the floe while waiting. The Eskimos in fishing may be seen in the branch of a tree employed by tribes of the north-west coast of America to dip up their water from the sea, and the gummy bag held in the hand of the Australian women, when they are in cooking, to catch small fish as they swim down stream. In these cases, no part of the prey is involved, and this is also the case when, either on accident or as the result of observation, the prey is found in its lair. In California, the Indians use to cut down trees, sometimes as small as sixes or ten, after the fishes, the natives of the Hooked Peninsula in its nest. In Australia, the bark of the tree was examined for marks of the animal's claws; when its nest was found, the animal was dragged out and killed.

Illuminating the discovery of the bird, the hunter stationed himself at some spot which, to his knowledge, was frequented by the birds. He would be the one who owned a track leading to the waterhole, or some spot at which it came to feed. In the Torres Straits, the native, having observed the invisible route by which pigeons return from their feeding-grounds by day, stations himself in a tree near their line of flight, and with a length of cord attached to his wrist, knocks the birds down as they pass. In Blain'sbook Island, trees were built under the ground, and while the natives on the Dyak river cockatoos knocked off their roosting-places at night with a long cane. In the winter the Eskimos take advantage of the heat of the meal and winter by the holes into which it comes out to breathe, or, in the year, winter. It is in lakes in the

sun. The Eskimo build platforms on the trees visited by the birds, from which they kill the animals as they alight on the ground below. It is, however, in running down the deer that the savage hunter displays his skill and daring. The Australian hunter captured the kangaroo by pursuing only, following it until it was exhausted and then ran down the men, and the natives of Hawaii the goats. The Saahof Indians of California hunted the deer on foot, and they were at intervals along its trail taking up the quiver of arrows and relaying.

The pursuit of wild animals with the object of securing the prey by throwing it out demanded exceptional speed and endurance, while the result must, not infrequently, have been disappointing. Primitive man has, therefore, preferred, as a rule, to rely upon other means of approaching sufficiently near to his prey to enable him to discharge and capture it. Both tracking and stalking require highly trained powers of observation, and those with great skill to avoid attracting the attention of the quarry through its senses of smell, sight, or hearing. Record has frequently been made of the ability with which primitive peoples move noiselessly through jungle and forest without disturbing a twig.

Most hunting races, however, do not rely entirely upon their own skill in tracking; they have utilized the natural instincts, speed and scenting powers, of the dog.

The Australians employ the dingo in hunting the emu, and other game. In hunting the same, the Eskimo dogs overtook their masters and held the prey until the latter came up. In the Malay Peninsula only the wild tribes use the dog. The Barua-Javan, while following down a stream in his canoe, sends his dog through the woods along the bank to hunt the menagerie, and the natives then also train their dogs to hunt by themselves. Both the Bokol (Oolo) and the Esko perform certain rites over the dog before they are free of the bush, to make them courageous and of keen scent. The hunting leopard of India and Persia and the hawk in Europe and Turkey, as recorded by Marco Polo, are other instances in which the natural instincts of animals have been utilized by man in hunting. In fishing, the employment of the men, or the man, by the natives of the Andes and the Australians to hunt the turtle or dogfish by gathering in consultation. In approaching the quarry, advantage is taken of shelter, both natural and artificial. The Australian, when hunting ducks, swims beneath the surface of the water, with breath held through a reed. On the Nile, the ancient Egyptians hunted duck in much the same manner, covering their heads with a calabash; while in China it used to be the custom to catch swans by placing a basket containing bait on the head of the swimmer. Convenient trees, shrubs, or tufts of grass were used to cover the approach of the hunter; sometimes branches, small bushes, or bunches of grass were carried in the hand. The Bushman crept up behind a grass screen to the herts of antelopes, ostriches, or other game; the Australian of the Lake Eyre and the Southern screens of bushes, or in some districts a collar-like head-dress, when stalking the emu.

The appearance of the animal to be caught is frequently imitated.

The Bushman hunted the quaggas, which grazes with the stork, by covering himself with the skin of one of these birds and imitating its action in feeding by means of a stick thrust up through the neck. Among the Dogrib Indians, two hunters covered themselves with the skin of a musk-rat, the first holding in his bands heads against which he rubbed the head of the animal in imitation of its action in feeding. In North America, in driving the buffalo one of the hunters, dressed up in a buffalo skin, pointed the head to the sides of the precipice towards which it was desired to drive them. Various forms of decoy were employed.

A method frequently used in Australia was to fasten a wounded bird to a tree. It then attracted others by its cries.

1 P. A. Talbot, In the Shadow of the Bush, London, 1913, p. 120.
5 W. T. Hornaday, In RIFT, 1887, pp. ii. 482. 
HUNTING AND FISHING

Sometimes the fury of the bird was initiated by the hunter. The Blue-bearded Heron selects a place in the middle of the water, and then about it are seen the crocodiles and other large fish. The bird frequently takes the crocodile to the hand and other fish in its eggs against the other. A form of decoy was an instrument of the preserver of the pressure of wood, and kept the Australians attracted pelicans by throwing shells into the water to attract the attention of the animals and attract the attention of the catching made of creaser or other material in which were set sharp thorns. It was a box-like construction with a network of strings. This was fastened to a stake and then placed in or above a small hole or in a small crevice on the rocks. A common form of trap was for the bird to be fastened to a stick from a tree. This was commonly used for big game, e.g., in the British Isles they used the Easemos for leopards and lions. Closer allied to the form is the spring trap, the spring usually being a springing legs down over or near the path and fastened with a twig, which, on release, tightens a noose around some part, usually the leg, of the animal. Among the Anjages, the release was a piece of cord or a small animal by the neck.

In another form of release trap, the spring may set in a slow manner and fasten the animal to a stick or a wire. The natives use a spear, and in the Malay Peninsula by the Easemos and in the African tribes by the Zulus. The native tribes placed a wooden spike in the trap, the spring being the form which caused the spring. An effective combination, consisting of a noose with a spear-trap set in openings at regular intervals, is used by the Jbana Benussi and Berembus tribes. The snare and trap have at all times been much used in North America. Among the Sioux, the hunter is caught by a net set down into the water. For example, the Indian tribes came to the surface of a river or into a lake, the hunter on the animal being fastened to it, a large net, a skin, or a piece of a large piece of wood, holding an excavation. The net may be used simply as a snare or to catch birds by shooting across the path which an animal is expected to take, or it may be machined instead of being thrown. In catching pigeons, for example, one side of which is pegged to the ground, the other fastened to a rod, the animal being killed when it alights or is fastened with a noose as they settle on their water holes. In ancient Egypt the clay nets were used in catching ducks.

In some of the cases mentioned above, pits and other forms of traps are used in conjunction with a fence intended to make the attack on the animal more certain. A fence is set around the animal by the hunter, and the traps are set in various parts of the area. The hawks which are often used by the native tribes, on the other hand, are more frequently planted in the area. The numbers employed may vary from two, three, or four, the number required for duck-driving in Australia, to the 60,000 mentioned as engaged in the great hunting expeditions of the Incas, when 30,000 head of game would be taken.

In Western Australia, at the moonlight time the black swan, the native bird in New South Wales, is hunted, and when the birds are only far from the water, they are shot with a network. A more elaborate method was used in driving duck. A net was stretched across the river or stream, the ends being fixed to pieces of wood, and the party went up stream and drove the birds down. When the birds appeared in the net, the hunter would fire, and the birds would rise, while one man whipped like a duck hawk and threw a piece of bark in the air in such a way as to force them back into the net of the hunter. The flock dipped, and many were caught in the net.

Fire was not infrequently used to assist the hunter either by driving or by confounding the animals. The Seneca hunted deer by night in canoes in the bows of which lights were fixed. At Pueblo, elk-deer and water-fowl were hunted by torch-light, while the Plains Indians drove the buffalo to the corral by fire. Fire was often used in Australia and Tasmania for driving the kangaroo.

The Eskimos and other peoples of the northern parts of North America used sometimes in hunting deer to draw a cord on a peninsula and drive the animals into the water, where they were easily caught or driven by hunters in canoes.

2. Beach-Beding, L. 1842, 509, 512.
4. H. E. Weeks, 183.
fences for driving the deer were erected near the track usually followed by them in the annual migration from their northern feeding-ground.

The Selangor Baka makes frequent use of game-fences, which the natives call "curtain fences," placed in lines with palm leaves across the path. These are sometimes as much as 500 yards in length. In Bugis they are made of a heap of woven grass, or of leaves, and are tied together by strings of cowrie shells. The deer are driven into them by the Baka and are killed by men stationed at the ends. The Baka of South Nigeria, in driving game, use nets which, when joined together, extend for half a mile. These are stretched across the land between the rivers which join to form an angle. In Africa the drive was frequently made without net or fence: the hunters surrounded the piece of scrub or bush in which the game lay, and advanced upon it with shots at a given signal. This was the method followed by the Central African tribes, the loango, ivory coast, and "medicines" for locust, being in the middle of the line. 

In Uganda in the lion hunts organized by order of the king.

In North America the drive was the most favored method of hunting the bison. Hords of bison were driven over crags and precipices, but the method more commonly employed was to erect a huge corral, such as was and is still used in Burma in hunting elephants. The buffalo corral was circular. A whole tribe would take part in these drives, and, as soon as the herd had been driven into and shut in the enclosure, women and children chafed on the back and faces of the animals as they gathered round in their endeavor to escape. After the introduction of the horse, the Indians, among whom the Comanches excelled as horsemen, not infrequently abandoned this method; the horses had no headband upon which they could be given a signal, or else the signal was given as a sign of a given signal.

In ancient Egypt the king frequently took part in hunting wild cattle. The herd was surrounded by troops of people of the upper classes and driven into enclosures. Among the Egyptians, as among the Indians, success was measured by the number of animals obtained in one expedition.

In fishing, so far as circumstances allow, the same methods are applied in Australia as in New Zealand. Fishing is the collection of shell and other fish and the simple operations of catching fish with the foot or treading them. The most widely employed device of catching fish is to make use of bait, or bow and arrow, spear and harpoon, the devices of attracting fish by the reflection of fire, by splashing, capture by the net, trap, and the drive — all of which are used in hunting animals on land.

One of the most primitive applications used in fishing, especially the earliest dip-net, is the bough of a tree covered with leaves, which is used to dip up fish spawn on the North Pacific Coast. Most primitive races use some form of dip-net, either to take small fry or to catch fish driven into shallow waters by other methods. At Natah Sound, sardines were driven into shallow waters and scooped up with tongs and wicker baskets. A special form of net is used in the Malay Peninsula. A very simple form consisted of a basket of bamboo strips used by the Malayan to catch small fish in pools. The common form is a basket of bamboo strips used by the Kedah Semang to catch small fish in pools. At the Keal, the Nias used the dip-net to scoop up salmon from stages built in the river. Some doubt was expressed as to its occurrence in America before the advent of the white man, but the Chukchis used a dip-net at San Marco, Florida, while there is little doubt that in Washington it antedates European influence.

The net, in its various forms, is the means upon which most men most commonly rely to supply himself with food from sea and river. The Andaman Islanders at one time used neta eighty feet in length and fifteen feet in depth, with a stake and stick, to each of which was attached a canoe. The fish were driven into the water and were caught. In Australia, on the Daintree, the natives use nets some twenty feet long fastened to two poles. Twenty or thirty of these nets are used together, each being worked by two men, who swim out into the river. As a rule the net in Australia is used to catch fish or suckers, although the use of them is recorded on the Darling. The Aborigines of the Bara, in Australia, used stone suckers and oar-wood floats to catch salmon. On the lake they used the same net, dragging it in small lakes between two canoes. In pre-European days in South America the net was used both on Lake Titicaca and among the coast tribes. The lamas, not strangers, who made living by fishing, landed on the coast of Peru, used nets for fishing.

The fish trap is distributed almost as widely as the net.

A primitive form of trap in use among the Australian Indians is a hollow log which is put down in a stream for some hours. Baskets and cages are also used. On Lake Nyoong, in the upper reaches of the Nile, among the Boxen, who make their living entirely by fishing, exchanging the fish they do not eat for grain, the men use the fish trap only, while the women use the net and line.

On the upper reaches of the Fraser and Thompson rivers the Dene and Carrier Indians use fish traps, among the former bottle-shaped baskets in connection with a weir; if it is not possible to build a weir across the stream, a pen or corral is built, into which the fish are driven by splashing water. Similar traps are fixed at one side of the water, into which the fish swim in trying to escape. An ingenious form of trap is a pot-hanger basket, a screen-like erection at the top of a fall; as the fish in ascending the river leaps the fall, it strikes the screen and falls into the curved pocket at the bottom.

Catching fish by means of a weir, whether in a trap or other, is of frequent occurrence. In Australia, dams and weirs were built across streams, in which nets were fixed, or upon which platforms were built. The platforms were covered with bouncing fish in which the fish became entangled. One of the most famous weirs is that at Beverag on the Gippsland River, a few miles above Bourke. It is sixty to a hundred yards wide, and extends for over a hundred yards along the stream. It is built of stone, three to four feet high, and consists of a labyrinth of interwoven passages in which the fish are tangled and caught by hand. Sticks or bush fences were also built. Portable bush fences were sometimes extended across a water-hole, to which the women and children went with bunches of grass and heavy baskets.

Poison is often used either to simplify the fishing, making it possible to take them by hand, or to drive them from their places of refuge. It was employed by the Australians; and in North America it was used throughout the Western States. The Californian Indian used soap root after cutting off the water. The use of some kind of vegetable poison is recorded among the Pima, the Tarahumara, the Payas of Honduras, the Mogros of Columbia, the Peruvians, and the Malays. In Asia this is the case, both on the Upper Nile and in the Amazon. The Darien Indians also use poison when the water becomes clear.

Many peoples took advantage of the fact that fish are attracted by the reflection of fire, to fish by night, as did the Californian Indians. In Australia (Victoria) a torch is fixed in the bottom of the canoe. While it is paddled up stream, a man sitting with his back to the light spears the fish as they swim past him.

The rod, though recorded among a number of peoples, is not very frequently employed. It is used among the Kedah Semang. Among the Benuak and the Bodi the fisherman (who, like the Adene, attract the fish by striking the water with the top of the rod), angling is left to the women and children; sometimes its use is confined to women, as among the Nilotic tribes and on the Murray in Australia.

The hook used in Africa is usually a piece of bent wire. The Australians used many different materials. A thorn probably represents the earliest form of hook, and is still used with a line in the Malay Peninsula, but the Australian native used a piece of twisted, single-hawk toad, tortoise-shell carefully molded into a bow, stone, etc. The material required most was iron; but the beautifully made hooks of this material were the result of a long process of patient grinding, piercing, and polishing.

When the game has been taken or killed, the disposal of the carcass is, as a rule, dependent upon a generally recognized custom; usually it becomes the property of the man who first wounded the animal, but the distribution of the various parts...
HUNTING AND FISHING

of the body is not always in his control, and frequently must also be in accord with the will of another, be it that of a man's relatives, a lady seated in his car, or a lady seated in his car, or his brother's children.

For example, in Australia among the Kurno, a catch of eels was regarded as a mark of respect to a man's relatives, a lady seated in his car, or his brother's children. The Kurno man, in the words of the chief, was allowed to keep the left side for himself, but the remainder was distributed among his parents and relatives, with the head being given to the first and second born, the owner of the land on which the animal was killed, and of the dog which pulled it down. The bones of an animal were given to the god of the chase, while the head was eaten on the field, as it could not be buried.

In Uganda, certain spells were different in that the person who brought the death to the man and his family was believed to be connected with it.

Right of ownership or hunting rights over the land are important in the hunting community and clearly recognized. In New Guinea, as in Wag-Waga and the Tutu tribes, the rights rest entirely in the same way that the owner of a horse believes his horse to be his own, and as such, the animal is killed on ground regarded as the property of another tribe, it is not considered a part of the kill to that community.

On the Congo, the Bonobo used to send the head of the animal to the owner of the land on which they killed the animal. Among many hunting peoples certain animals or certain parts of animals are not eaten, either for reasons which vary from tribe to tribe, or for reasons which are assigned, or by an express taboo. The most familiar instance is the very general prohibition against eating the flesh of the totem animal. Some peoples do not as a rule eat the flesh of wild animals, e.g., the agricultural Akikuyu of Africa, even those who hunt, hunt only for a few days a week, and the Tohono O'odham, who hunt only for a few days a month.

Among the Nandi, the most of the clan have some prohibition laid upon them in connection with animals. The Nyeklo clan among the Nandi, for instance, do not eat the flesh of wild animals, as they may not wear the skins of wild animals except the hyrax. The Katero are the only ones who may eat it. Their Captain, when giving a feast of the season, will give his wife and children a pound of it. The head of the animal is sent to the owner of the land on which the animal was killed, and of the dog which pulled it down. The bones of an animal were given to the god of the chase, while the head was eaten on the field, as it could not be buried.

fishing charms are in use. The Kotts, for instance, in hunting the trampal, use a deformed bone of that animal on the arm to compel
other pigs to come to them; in hunting the walley they blacken
parts of the face with the burnt bark of an odoriferous tree; they
rub from the black lakes alligators, pigs, ducks, etc., on the
tooth of their dogs, and, before hunting, give them the bark
of cotoneaster trees coated with wax. The last-named charm is
especially efficacious if pieces of mullet are added, be-
cause, as the dogs come near attracted by the smell, they
are caught in the claws of the walley, which also grows in
the season with the seasonal ritual which is, as a rule,
immediately connected with food supply. Primitive races
do not recognize a close season in hunting, but
climatic, social, or religious conditions, or condi-
tions connected with the natural history of the animal,
sometimes enforce a period of rest from the pursuit of a particular species. In Central Africa the growth of vegetation, in the Arctic
and sub-Antarctic regions the rigour of the winter and the
migration of species, make a change in methods and objects of pursuit imperative. Among the
Ngazas, a gewas, or tabu, forbids all hunting during the
agricultural season. Where such causes as these are
operative, the primitive mode of thought requires the
hunting season to be inaugurated by a
special ceremony to obviate the risk which attac-
taches to a spiritually dangerous operation, as well
as secure by a due observance of it the future supply of food will not be endangered by an
overight or mistake.

LITURGY.——See references in footnotes.

E. N. FALLAIRE.

HUNTINGDON'S (COUNTESS OF) CONNEXION.——The Countess of Huntingdon's Connexion is a local consideration of about
congregations, akin by origin to the Calvinistic Methodists, making some use of the Anglican liturgy
and the Thirty-Nine Articles, worshipping in buildings held by trustees with nominally absolute
powers, assisted now by a conference of representa-
tives. The founder, the Countess of Huntingdon,
Selina Shirley (1707–91), daughter of the second
Earl Ferrers, was attracted to Calvino by the
Methodist Society by George Whitefield. John
Newton declared that at this time he was not sure
that there was in the whole kingdom a single
minister publicly known as a gospel preacher.
She, therefore, approved Whitefield's plan of lay
preaching, and her seat of Donnington Park became
a centre of itinerancy over the Midlands. The
death of her husband (1746) left her in the prime
of life free and rich. On the return of Whitefield
from Georgia she relieved him of his money diffi-
culties and appointed him her chaplain, for his
capacity he conducted frequent meetings in her
drawing-room, and introduced Methodist influence
to society circles, while his correspondence from the
latter end the ceremonial which attac-
taches to the bear sacrifice suggests that it is locked
upon as an object of worship, if not as a deity.
When hunting the bear, the Denes begged the
animal to come to be shot; it was petitioned not to
angrily resist. Sometimes the bear was thanked for allowing itself to be killed. When
the flesh of the head had been eaten, the skull was
placed on a pole as a mark of respect, and, if
this was omitted, it was believed, the other bears
would not allow themselves to be killed. This
practice of placing the skull on a pole, usually situ-
ated at one end of the hunter's house, is found
throughout the two regions mentioned above.
Among the Ainus, bear hunting was the chief
occupation. It supplied the staple of their food

and chapels of ease; many were of the leisure classes. So successful was the experiment that other towns were similarly treated, from York to Lewes, from Norwich to Swanses; and the Countess moved her chaplains about as she deemed best. Her fame was at its height in 1786, when, after a vain remonstrance with Archbishop Cornwallis on the bad example of his wife, she brought on him a severe rebuke from the king. This naturally did not increase the friendliness of the bishops, and in her desire for evangelical clergy she adopted a still more independent attitude, resembling that of her Klamath river. There were no Klamath river.

Howell Harris, the Calvinistic Methodist, had acquired large premises at Trevecca, whither a number of Welsh evangelists had migrated. On this place he fixed for a Seminary, and on her first birthday (24th Aug. 1786) Whitefield opened it, for training at her expense young preachers who should be free to work within or without the Established Church. She appointed as President John Fletcher, who often came across from Madeley to take his duties seriously. A resident master was sought, whose prime qualifications were to be faith and power from above, devotedness to God's cause, and Christian experience. Greek, Latin, Divinity, and the Sciences were to be taught. From 1786 onwards the Seminary not only sent forth earnest recruits for work in Britain, Ireland, and America, but was the key-stone of its day, whither huge crowds resorted. In 1770 the Wesleyan Conference passed resolutions which led to a falling asunder of the Arminian and Calvinistic wings of the revival army. The Countess decided to establish a great London centre for the Calvinists, and bought fine premises in Spa Fields, which had been first a pleasure resort, and then a proprietary chapel. Retaining, as usual, a certain part of her technical residence, she evidently destined the main building to be the cathedral. A neighbouring clergyman, therefore, successfully tested the legality of her proceedings by actions in the consistory court of the Bishop of London (1779). This crisis considerably altered the character of the movement. Some of her sixty chaplains severed all official relations with her; others broke with the Establishment, and took licences under the Toleration Act. She guarded these by registering her buildings for Dissenting worship. This, however, was hardly more than a technicality, for the liturgy was used almost unchanged, and the Thirty-Nine Articles were taken as the basis of a new Confession. The gap caused by the defection of some chaplains was partly filled by students from Trevecca. As the bishops grew more reluctant to ordain these, the final breach occurred in 1783, when two of her clerics openly ordained six students in Spa Fields. This emboldened Wesley to follow suit next year.

The Countess proposed to consolidate the movement by forming an Association of ministers and laymen, somewhat on the lines of the Old Dissent, but was persuaded to bequeath all her chapels absolutely to four trustees. The Seminary was at once transferred to Cheesham, and became the centre of gravity. The foreign missionary movement inaugurated by Carey was taken up enthusiastically by the London Missionary Society being formed at Spa Fields (1786), and the college supplying numerous volunteers.

The Itinerant system inherited from the Countess has given place to comparative facility of tenure, and the Congregationalists have shown themselves ready to disregard all differences and to welcome into fellowship; but the disintegration was checked in 1899 by Chancery. The college is now at Cambridge, while the trusts encourage continuous service within the Connexion.
HUPA

In the autumn, when the acorns have fallen in considerable quantities, a feast is held. Fresh acorns are ground, pressed with the teeth, and made into mush by women designated for the office. When the people have gathered about noon, the priest leaves the sacred house and goes to the feast-ground. No one is allowed to look at him as he passes, for he impersonates the god of vegetation. He builds a fire ceremonially, and piles stones in it, which are to be viewed by the women to cook the mush by dropping them hot into the baskets in which it is contained. First the priest and then the other men go to the river for a bath. The women wash their hands and faces only. The mush is served to the people in baskets, as they sit on stones, which remain from year to year in a circle about the fireplace. Fish, cured and fresh, are served in addition to the acorn mush. When the people have eaten, the priest places in the fire all the food that remains, and prays that the new crop may not be harmed by the birds and rodents, and that even in small quantities it may nourish and sustain the people. The stones used in cooking are deposited with those of previous years, and are never used again, except by the priest who keeps them in an orderly pile.

There are priests in whose families it is the traditional duty to catch the first lamprey eels and first salmon of the season, and perform a ceremony that shall ensure an annual run of these in large numbers and of excellent quality. The lamprey is protected by the priest, the object of which is to prevent certain evil supernaturals from being at the mouths of the rivers from stopping the migrations, and to guard against the offending of the deity by the breaking of tabus. The eels and salmon caught are eaten by people who gather for the purpose, but the number so caught is usually insufficient for a considerable feast.

There are several ceremonies of a public character, the benefits of which are for particular individuals. The breaking of one of the main tabus connected with deer results in the enslavement of the offender's soul by the beings who are believed to own and care for the deer. When this has happened, the unfortunate man loses his health and, upon ascertaining the cause, calls in a priest learned in this particular. A night is spent in song and prayer, in which several laymen participate, the object being the release of the soul. Because of certain omissions on the part of the parents, or as the result of several deaths in the family, the souls of children, while they are still living, are supposed to have gone to the world of the dead. They are recalled by prayer, songs, and dancing, which continue during the first half of the first night, and during the whole of the third night. The ceremony is in charge of a priest or priestess, who spends the preceding days with a young girl in the forest, securing the necessary herbs and pitchwood used in the ceremony.

A ten days' ceremony is held for the benefit of each girl at the first appearance of menstruation. During this time she is under the guardianship of an old female relative, who makes sure that she keeps the tabus in regard to food and water, which are allowed her but once a day in combination as acorn gruel, and prevents her from eating with men. The girl bathes in a ceremonial way at prescribed places each morning, and afterwards brings wood for the house-fire. Special care must be exercised in regard to the language and conduct of the girl during this time. Not only will whatever she says happen, but whatever she does will become a fixed habit during her future life. The rising tone is spent in song. Several times during the night the men come into the house, where the girl is com-
pletely covered with a blanket, and sing over her, shaking rattling wands as an accompaniment. After the men withdraw, the women, who remain, sing songs of their own. This ceremony and the keeping of the tabus are supposed to procure long life and a desirable disposition for the girl.

A shaman, or medicine-man, first undergoes training during several months under the care of an older shaman. He is required to restrict his supply of water and food, and engage much in bathing and in smoking of tobacco. The nights, especially towards the close of his training, are spent before a fire in a large underground room. Men and women join in the songs, and keep time with their feet as they sit about the sides of the room. The candidate must show his ability to control certain imagined semi-material objects, called ‘pains,’ injecting them and removing them from himself and others at will.

Besides these shamans with supernatural power, the singers at the greater ceremonies with supernatural gifts, and the priests charged by inheritance with the celebration of the dances and feasts, nearly every adult knows several formules for some particular object, such as hunting, fishing, gambling, love-making, and the cure of ailments. These formules are generally repeated over some fragrant herb which is applied to the body, internally or externally, or to the weapons and implements concerned. The formule recite the discovery of the remedy or power by a supernatural person, the first appearance of the results which followed. A prayer is addressed to this being, and an offering of tobacco made by blowing it in a group of four, with denial of any harm from the hand. One may secure from another the benefit of one of these formules by the payment of a reasonable fee. Care is taken, in reciting them in the presence of others, to chant them in a manner that they can not understand. Many formules have songs used in connexion with them, particularly those relating to hunting, fishing, gambling, and love-making.

Hunting is usually a male occupation. For this reason the Hupa hold that burials should be conducted with great care. The personal property of the dead is either buried with him or destroyed, apparently to prevent his return for it. Great care is exercised to avoid the reappearance of the ghost, especially in dreams. A five days’ ceremony is necessary to free the grave and the family of the deceased from uncleanness.

Religious beliefs.—The Hupa believe that they sprang spontaneously into being from the ground, in the same locality in which they have lived since they have been known by white men. They believe that they have been preceded by a race of similar origin—immortals, who, by their correct behaviour, fixed for the mortals destined to follow them the traditional conduct for all situations in life. Their chief, Yimantswinyinap, gave shape to the world according to his whims, provided some of the ceremonies, and rid the world of the monsters that preyed upon men. His wives, to whom he had been faithful, broughth death into the world, and frightened the immortals from it. The latter fled to worlds beyond the Pacific Ocean and above the sky, where they still practise the perfect ways and celebrate the dances. Yimantswinyinap presides over one community of them, and his son over another. They observe the condition of the earth and its inhabitants during the celebrations of the dance. The immortals in the fame of Yimantswinyinap’s conduct was often not above reproach and the evils in the world, including death, are the results of his uncontrolled passion. He is seldom addressed in prayer.

A god of vegetation, Pusukatsinini, ‘the lives south,’ was the originator of vegetable food, and still controls its supply by making annual provision according to the care or abuse of the previous crops by the people. He is generally invisible, is small of stature, and always carries a sack of seed.

The deities of the several rivers or mountains are under the care of local gods, called Toss. They keep the deer in the interior of their special hills, and let out only those destined as the reward of the hunter who keeps the tabus and sings the required songs. They have the owls for servants. The Hupa seldom mention them, but fear them greatly and direct many of their prayers to them.

The two thunders, at the north and the south, control the weather, sending that which is unseasonable when they are offended by the presence in sacred localities of those who have been bereaved, and are therefore in a measure unclean. They are appeased by a ceremony conducted near a rock in which the thunders are interested. The particular sort of weather desired is indicated by sprinkling the rock with water, or by carrying coals of fire round it.

There are numerous deities believed to occupy the interior of mountains, deep pools in the streams, and certain places by the trails. These are not undependable to mortals, with whom they have become acquainted through friendly visits to the sick and to strangers and the uninitiated young members of the tribe.

The lower world, the abode of the dead, is under the control of a person seldom named. All except shamans and singers at the dances go to the common home regardless of their conduct in life. They appear there in the exact condition in which they have been depicted night preceding a hunt in continued song and prayer.

The elderly men and the religiously inclined younger ones follow the daily habit of bringing sweat-house wood during the afternoon, taking a plunge into the river after the sweat bath, and spending some time in prayer, sitting naked after the bath. When a particular branch is desired, the men go to some high, wooded point, trim the branches from near the top of a large Douglas spruce, and make nai in the sacred section of the green brush throughout the night. Bathing in certain pools, believed to be dangerous because they are the haunts of water-monsters, is productive of good luck. Whenever occasion suggests, extemporal prayers are resorted to, accompanied by burning the sacred root.

2. Religious beliefs.—The Hupa believe that they sprang spontaneously into being from the ground, in the same locality in which they have lived since they have been known by white men. They believe that they have been preceded by a race of similar origin—immortals, who, by their correct behaviour, fixed for the mortals destined to follow them the traditional conduct for all situations in life. Their chief, Yimantswinyinap, gave shape to the world according to his whims, provided some of the ceremonies, andrid the world of the monsters that preyed upon men. His wives, to whom he had been faithful, broughth death into the world, and frightened the immortals from it. The latter fled to worlds beyond the Pacific Ocean and above the sky, where they still practise the perfect ways and celebrate the dances. Yimantswinyinap presides over one community of them, and his son over another. They observe the condition of the
HURON.

The Huron were a confederation whose principal members were four Iroquois tribes—Attignawanant (‘Bear People’), Arundahronon (‘Rock People’), Attigneonongnha (‘Cord People’), and Tohontaaents (‘White-ears or Deer People’)—that, from about 1639 to 1650, occupied a large area, and were united in the pen insula formed by Nottawasaga and Matchedash Bays, the River Severn, and Lake Simcoe, in what is now known as Simcoe Co., Ontario (see the map). They were governed by a high council of elders, and their religious rites were conducted by the nearest female kin; and the personal belongings of the husband, such as clothing, hunting and fishing implements, and a small amount of canoe were regarded as a gentle property—by his brother or by his sister’s son. Each phratry had the right to certain religious ceremonies and to the preparation of certain medicines; each gens to the worship of its tutelary deity; and each individual to the possession and use of his particular amulet or charm.

The general picture of the Huron, as given by the early Recollects and Jesuits, is attractive. We are introduced to a people, grave, patient, courteous, and hospitable, modest in demeanour, brave, and, on the whole, industrious. Their faults were those of primitive peoples generally. They were cruel to the enemy, they would feed or steal from the alien, pre-nuptial chastity was lightly esteemed, and their religious rites consisted much of that which was abhorrent to the positively religious. Their criminal code has been summarized by Powell (1 REBEW [1881], 68-80). A girl guilty of fornication was punished by her mother or a female guardian; but, if the case was flagrant or neglected, it might be taken up by the council women of the gens. An adulteress had her hair cropped, her left hand was amputated, and her left ear cut off for the second. Theft was punished by twofold restitution, and treason was a capital crime. Murder and maiming were compounded (cf. the elaboration of Rougemont, in Lalemsant, Le Jeune, xvi. 227-229). Among the minor members of the confederacy were the Iroquoian Wenrohronon and the Algonquin Tonataratonbronon, who joined the Huron in 1639 and 1644 respectively.

The term by which this confederacy is known is not Indian, but French. Huron being a pejorative of Ou. Fr. hure, ‘rough, bresting hair; and having been applied to the peasants of the Jacques in 1648. According to Lalemsant (op. cit. 229-231), the term was applied to these Indians by a Frenchman about 1600, because of their condition of head-dress. Their native name was Wendat (probably meaning ‘islanders’ or ‘peninsular dwellers’), which appears in a number of variants, and which has been corrupted into their modern designation Wyandot.

The geographical system of the Huron has been studied exhaustively by J. W. Powell (1 REBEW [1881], 59-68), who shows that it was based on a gentle organization of consanguineal kindred in the female line, and that each gens bore the name of some animal, the ancient of this animal being the tutelary deity of the gens concerned. The gentes in the Wyandot period have been Big Turtle, Little Turtle. Mud Turtle, Wolf, Bear, Beaver, Deer, Porcupine, Strap-turtle, Highland Turtle. Huck, Snake, the Mud Turtle, Beaver, Strap-turtle, Highland Turtle. Beak, and Hawk are now extinct. The Wolf exercises the functions of umpire, mediator, and executive between the gens, including the Bear, Deer, Hawk, and Snake, and the second comprising all the rest (W. E. Connelley, Archaeol. Report Ontario, 1899, pp. 100 f., 105 f.; according to him, the Wyandont represent chiefly the Tionontati, or Tobacco Nation (on which see Mooney, HAI ii. 750 f.; for a different enumeration of Wyandot gentes, see Powell, loc. cit.). Each gens possessed a tract of land, which it could change only with the permission of the tribe; and at intervals of two years the women councilors re-partitioned the land. The property, consisting of the wigwam and household articles, was inherited by the eldest male or female child; and the personal belongings of the husband, such as clothing, hunting and fishing implements, and a small amount of canoe were regarded as gentle property—by his brother or by his sister’s son. Each phratry had the right to certain religious ceremonies and to the preparation of certain medicines; each gens to the worship of its tutelary deity; and each individual to the possession and use of its particular amulet or charm.

The general picture of the Huron, as given by the early Recollects and Jesuits, is attractive. We are introduced to a people, grave, patient, courteous, and hospitable, modest in demeanour, brave, and, on the whole, industrious. Their faults were those of primitive peoples generally. They were cruel to the enemy, they would feed or steal from the alien, pre-nuptial chastity was lightly esteemed, and their religious rites consisted much of that which was abhorrent to the positively religious. Their criminal code has been summarized by Powell (1 REBEW [1881], 68-80). A girl guilty of fornication was punished by her mother or a female guardian; but, if the case was flagrant or neglected, it might be taken up by the council women of the gens. An adulteress had her hair cropped, her left hand was amputated, and her left ear cut off for the second. Theft was punished by twofold restitution, and treason was a capital crime. Murder and maiming were compounded (cf. the elaboration of Rougemont, in Lalemsant, Le Jeune, xvi. 227-229). A secret sorcerer might be killed by any one (Brebenn, 223; Rougemont, 219, and in Lalemsant, Le Jeune, xvi. 221). If, however, a sorcerer was placed on trial and found guilty, he might appeal to ordeal by fire. Outlawry was of two degrees: if the outlaw continued to commit crimes, he might be killed without fear of clan vengeance, etc.; or he might be the dupe of whomsoever met with him to kill him (Powell, 67 f.). In any case, he was denounced; and more children, if harshly treated by their parents, were apt to hang or poison themselves (Le Mercier, J. E. xiv. 37-40; Robin Le Jeune, xvi. 171-173). A trait of the Huron and other Iroquois, as well as of the Algonquin and other eastern tribes, which has always shocked the general reader was their savage cruelty toward prisoners taken in war. No tortures were too terrible to be applied; and the bare recital of them as recorded in the Jesuit Relations and similar documents is, it must be confessed, somewhat unpleasant reading. It would appear that to some degree there was a delight in torture for its own sake—a sentiment which appears often in children of the higher races, and of which traces are found among even the most cultured adults. In many instances, further, there was a sentiment of personal revenge for the loss of a relative must have played a part. Yet there was also another side, in which, apparently, must be sought the explanation of this trait. In a case reenacted by Charlevoix, Hist. of New France, tr. J. G. Shea, New York, 1896-97, i. 105-110 (repeated by Le Jeune, J. E. xvi. 37-79), a Seneca captive was conducted to a Huron village to take the place of the captured nephew of a chief, if the latter so desired. The prisoner was given a bribe, was clothed in a new beaver robe, and, seated in every cabin,
was treated with all kindness. The chief received him with affection, and the captive Huron's sister gave him food as if he were her own brother. With regret, however, the old chief informed the prisoner that his limbs were so severe that he must die, and the captive was accordingly tortured to death. Generally speaking — although exceptions frequently occurred — a captive was treated as well as possible until he reached the village where his fate was to be decided. There he might be adopted in the stead of a kinsman captured or slain; and such adoption was, in reality, based on a belief that the person so adopted was actually the person whom he represented. If tortured, he was expected to show defiance to his tormentors, and to bear every pain with the utmost stoicism. In the midst of his tortures, caressing words were addressed to him, and he would be honored with delicate touches of firebrands or red-hot hatchets. To the horrified observers of all this, such caresses seemed, with good reason, the irony of demons incarnate; but it may be suggested that these were both intended and received as genuine. The substitute for a hero must die like a hero; if he was a poltroon, he dishonoured both himself and the dead. In him were curiously blended, to the Indian mind, both the enemy and the friend. He must suffer all night until the dawn (Lalemant, in Le Jeune, Jes. Rel. xvi. 76; cf. lxi. 65), double-bliss in honour of the war-god, who seemed to have been another form of the Huron. After his death, if he had borne himself bravely, portions of his body were eaten (see art. CANNIBALISM, ii. § 6); and in some cases a Huron would make an inscription in his own neck, and permit the blood of his tortured enemy to flow into it; for,

"since they have mingleth his blood with their own, they can never be surprised by the enemy, and have always knowledge of their approach, however secret it may be" (Brebeuf, in Le Jeune, Jes. Rel. xvi. 287-288). It should be noted that, whereas in times on bear, dog, deer, or fish, the head was the most important part, in cannibalistic foods the head was given to the lowest individual present (ib. 289).

The trophy usually carried off from a slain enemy during war was the head, and the cabin of the war-chief was called "the house of cut-off heads" (Le Mercier, in Le Jeune, Jes. Rel. xli. 50). If, however, their burden of heads proved too heavy, "they were content with taking the scalp with its hair, which they call pensive . . . to make trophies of them, and to put them, in time of war, on the palisades or walls of their town, hanging, or of a long pole (Sagard, Voyage, no. 382, p. 482; cf. 485)."

The Huron possessed a form of fellowship, by which "two young men agree to be perpetual friends to each other, or more than brothers. Each reveals to the other the secrets of his heart, and his name; his wives, and that he is an important, and defended him from wrong and violence, and at his death is chief mourner" (Powell, 68).

The sexual morality of the Huron appears to have been rather low. Pre-nuptial chastity was rare, and the young men frequently kept mistresses. Even after marriage, husband and wife are described as permitted to seek other temporary partners, without manifestation of jealousy by their lawful spouses (Sagard, Voyage, 160, 165, Hist. 318 f., 450); and Sagard even declares that the favours of girls were sold for a small price by themselves and by their fathers—and of wives by their husbands—and that panders were not unknown (ib. 177). In a proposal of marriage, the man asked the girl of her parents. If she then accepted his presents, he was privileged to pass two or three nights by her side before consummating the marriage; but, if she had little liking for him at the end of that time, the matter was closed. If she felt affection for her lover, the formal marriage took place by the simple announcement of their wedlock in the presence of relatives and friends, and a wedding feast followed (Voyage, 161-163, Hist. 318 f.). Marriage within the gens was forbidden, though it must be contracted within the tribe; so that, if a person outside the tribe was chosen as a mate, he or she must first be adopted into some other gens than that of the prospective marriage partners (ib. 143, 199). The newly married couple was usually placed among the brides—unless sisters, who must be married within each other's lifetime, or else the chief would recompense the husband's niece, as in the case of a wife of a chief, as the case may be. If his bride he has never met, without reproach (Le Jeune, Jes. Rel. xvi. 258); must be from different gentes. The husband is the chief of his gens, but lived with the woman of his gens. Polyandry was unknown (for Powel, 68). The descendants of brothers and sisters were regarded as "brothers" and "sisters," and could see intermarry "if they follow the good customs of the nation"; nor was a widow or widow expect a re-marry within three years (Le Jeune, 29-38).

The principle of matrilocality is also obvious as a cause of death, for,

"in the event of the death of the mother, the child belongs to her sister or to her nearest female kin, the latter being 

led by the council women of the gens. As the child became a mother, on the death of the father the maternal sisters are held for her own male relative until she marries" (Powell, 64)."

Divorce was extremely facile (Lalemant in Vincent, Jes. Rel. xxvii. 51-53; Sagard, Hist. 396 f.); but, if there were children, only a can cause dissolved the marriage. In this event, the children went with the father; but if the parents were not the heirs of their father, whose property went to the children of their sisters (Sagard, xiv. 104-105, 173).

The cult of the Huron, as has already been noted, was largely composite in character. That is stated by Lalemant (in Le Jeune, Jes. Rel. xv. 197-199) that the Huron rites of marriage took place at the drinking-net, has been envolved from the Algonquins, because "some years ago, the ojib of the net had declared himself enemy of the loss of his wife, and hence had prevented Huron from catching fish until he had a space: whereupon, to make him the more content, he gave him two (cf. Brebeuf, in Le Jeune, Jes. Rel. x. 167, where it is added that fish fed him)."

As among so many other peoples, beliefs relatively fluid among the Huron, whereas custom and rites were firmly established. This is kept up by Le Jeune (Jes. Rel. xvi. 199):

"The belief and superstitions of the savages are we deeply rooted, often an unspoken, and they are not only not on a few but, in themselves, and others disappear, or are disapproved by the rays of the sun and the four winds, as it were, to prove that we are not related to the ears, that is a longer story. It is in each other, understanding the bad habits of the wild."

The traditional history of the Huron was alive by being recited at assemblies for the section of chiefs (Hagmenecan, in Lalemant, Jos. Rel. xxix. 61), and they believed that they came originally from a mountain side between Quebec and the lower St. Lawrence (Wilson, Trav. Bkg. Can. ii. p. 69).

Their cosmology is elaborately described by Brebeuf (in Le Jeune, Jes. Rel. x. 127)."
victory. Very frequently, they address themselves to the sky, paying it homage; and they call upon the sun to be witness of their sorrow, or of their innocence. But, above all, in the treaties of peace and alliance with foreign nations, they intercede with the monster, and ask the sky, which sees into the depths of their hearts, and which witnesses to the treachery of those who betray their trust, and do not keep their word."

We are also informed by the same authority (ib. 217) that the principle of evil was acknowledged to be the Pehueni. They believe that there is a kind of monstrous serpent which they call Angel, which brings with it two birds of omen, and almost every misfortune in the world. They say that this monster lives in subterranean places, in caverns, under a rock, in the woods, in mountains, but generally in the banks of rivers. They say that the sorcerers use the flesh of this frightful serpent to cause the deaths of those upon whom they cast their spells.

If a man died by drowning or freezing, the sky was said to be angry, and must be propitiated by cutting up the corpse and throwing the entrails and choicest portions into a fire, as an offering to the offended deity (Brébent, in Le Jeune, Jés. Rel. x. 160). The widespread belief in the thunderbird (cf. Brébant, Voyages, 251, Hist. 500; Brébent, 46) during eclipses shot arrows at the sky to deliver the man from danger. They used these arrows to try to drive away the wind and weather (Sagard, Voyages, 251, Hist. 349, 494) and even made miniature birds or figures of the monster out of clay (Sagard, Voyages, 251, Hist. 405 f., 425; Brébent, 165-167). To secure good fishing, tobacco was often burned in honor of the water-spirit; but, if any portion of fish or game fell into the water, they would not eat it, thinking it was polluted. They believed that the naga would tell the fish if such a thing occurred, or even if a fish was hardly preserved; but, on the other hand, a good catch might be secured by the services of a fishing preacher (prédicateur de poissons) in each cabin, who told the fish of the Indians' devotion to them, and used them to help the Huron, who honored them and did not burn their bones (Sagard, Voyages, 255-258, Hist. 639-642, 494). Human sacrifices were unknown among the Huron (Sagard, Hist. 499).

In the Huron's mythology, the monster being thus recorded by Lalemant (in Vimont, Jés. Rel. xxiii. 56): "It should go every day to his field, throw some tobacco on the fire, and burn it in honour of the demon whom he has wounded, calling about this form of prayer: "Listen, O sky! Take my tobacco; have pity on us!"

The general attitude of the Huron towards the unusual and their faith in charms are summarized by Breteanu (Jés. Rel. xxix. 25-27; cf. also Raguenseau, in Lalamant, Jés. Rel. xxxii. 211-213;): "They had a superstitious regard for everything which offended a little of the uncommon. If, for instance, in their hunt they had difficulty in killing a bear or a stag, and on opening it they found it in their head or in the entrails a bone, or a stone, or a serpent, etc., they said that such object was an omen, that is, as an evil omen, calling this form of prayer: 'Listen, O animal, so that it could not be killed;... if they found in a tree, or beneath the soil, some stones of an uncommon shape, like a plate, or round, or round, they esteemed this encounter fortunate, because certain demons (they say), which live in the woods, come to visit them again successful to fishing, hunting, trade, and gaming. These Indians believe that their changed forms, transforming themselves, for instance, into a serpent, or a river's back, or an eagle's claw, etc., changes which none had seen, but which all believed.'"

The system of fraternities was developed among smiths on the forgehead, would be killed (Brébent, in Le Jeune, Jés. Rel. xii. 163). The Huron. The members of one of these, in endeavouring to expel the disease demon Aoutaerhoi, carried hot stones and firebrands in their mouths, rubbed the sick with the glowing embers, and growled like bears in their ears (Le Mercier, in Le Jeune, Jés. Rel. xiv. 50-55). In general, Lalemant (ib. xvii. 197) says: "For several of these superstitions there are organized fraternities, to which, and especially to the masters of which, one must address himself. All those who have once been the object and occasion of the dances or the feast belong to the fraternity, to which, after their death, one of their children succeeds; some have, besides, a secret or a charm which has been de-\n\n\n183 They say that the sorcerers ruin them; for if any one has succeeded in an enterprise, if his trading or hunting is successful, immediately, these wicked men bewitch him, or some member of his family, so that they have to spend it all in doctors and medicines. Hence, to cure them, there is a large number of doctors whom they call Arendidosses, ... Some only judge their effect by the polarity of the fine arrows: the yellow arrow for male, to cure the disease by blowing, by potions, and by other ridicu-\n\n\n184 But neither case do anything without generous presents and good pay."

185 There are here some sociologists, whom they call also Arendidosses, and who undertake to cause the patients to recover, to cure them, and to predict future events' (cf. also Brébent, in Le Jeune, Jés. Rel. x. 187-190; Raguenseau, in Lalamant, Jés. Rel. xxvii. 135-136, 211; Sagard, Hist. 184).

The Huron maintained the doctrine of the multiple soul. According to Sagard (Jés. Rel. xvi. 191), the belief in souls profoundly affected the Huron theories of dreams, ondonoc ("wishes of the soul"), disease, and medicines. Failure to dream was one of the signs that the soul had departed (Le Jeune, Jés. Rel. xvi. 193). The whole theory is set forth by Raguenseau (in Lalamant, Jés. Rel. xxvii. 180-191; on the importance of dreams, see also Brébent, in Le Jeune, ib. x. 169-173; du Peron, ib. xv. 177-179; on the ondonoco, du Peron, 179-181; Lalamant, in Le Jeune, ib. xvii. 147-149, 182-183, 186-187; Chastelain, in Le Jeune, ib. xix. 193).

Parents dreamed on behalf of their sick children (Brébent, 173). On one occasion a man dreamed that he was burned by the Indians. To avoid this fate, he was somewhat severely burned as a fictitious captive by his compatriots at the regular burning place, after which he offered a dog to be killed, roasted, and eaten (Lalamant, in Vimont, Jés. Rel. xxiii. 171-173; cf. also Breteanu, Jés. Rel. xxxii. 19). Sometimes the dream led to obscene rites (Sagard, Hist. 308 f.). After a propitious dream a feast was often given, for, according to Raguenseau (in Lalamant, Jés. Rel. xxxii. 185), they say that these gifts are given to compel the soul to keep its word, because they believe that it is pleased at seeing this expression of satisfaction for the propitious dream, and that, consequently, it will set to work sooner to accomplish it. And, if it failed to do so, they think that that might be sufficient to prevent such a result, as if the indisposition of the ondonoco had withdrawn its words' (on feasts among the Huron, especially Brébent, in Le Jeune, ib. x. 176-183).

The theory of the Huron medicine was based on the belief that 'all remedies always inoffensively have their effect; if, then, the patient did not recover with a natural remedy, the patient was sick of a supernatural, and there was need of a supernatural and miraculous remedy' (Breteanu, Jés. Rel. xxxix. 25). According to Raguenseau (in Le Jeune, Jés. Rel. xxxii. 193), the "Huron recognizes three kinds of diseases. Some are natural, and they cure themselves with natural remedies; others are supernatural, and there was need of a supernatural and miraculous remedy."
HUSITES

desires something, and that they care by obtaining for the soul what it desires. Doubtless, the attributes of the spell are by a spell that some sorcerer has cast upon the sick person; these diseases are transmitted by withdrawing from the victim the body of the spell that causes his sickness. This spell may be a knot on his hair, or a thread on his hat, or the hair of an animal's tail; a piece of leather, or of bone; a leaf of a tree, some grains of sand, or other similar things.

Most diseases arise from unsatisfied soul-desires or from witchcraft (Ragueno, 201-506, with the general procedure in such cases). The Huron sought baptism at first 'almost entirely as an aid to health' (Brébais, 13). A curious custom is recorded by Sagard (Hist. 313), that states sometimes, either in consequence of a dream or at the bidding of the leé (medicine-man), the girls chose young men with whom they passed the night. In some instances stench was used to drive away demons of disease (Le Jeune, Jes. Rel. xix. 71). A death all failed, and there were many sick in the village, recourse was had to the lonauroycors or oumcorose (turning the brain upside down), when the villagers turned everything topsyturvy, shouted, and ran about all night, seeking to expel the demons. They then thought of the first object that came into their minds and went, if necessary, to cabin demanding something, and receiving gifts until they obtained that of which they thought. All other presents were returned after a feast, ordinarily lasting three days; but, if they failed to secure the object desired, the persons thus disappointed thought that their death was near (Sagard, Voyage, 278-292, Hist. 774 f.; cf. Brébais, 175-177). This feast was also celebrated every winter in honour of all the deities together (Lasleman, in Vimont, Jes. Rel. xvi. 83). Frequently the game of crooked and 'dish' (a dish containing six plum stones, white on one side and black on the other, being dashed on the ground so as to cause the stones to jump out, the object being to throw all of one colour) were played as a cure for sickness (Brébais, 185-189).

Of ceremonial dances we have scant information, but we are told that children were not allowed to imitate them (Lasleman, in Le Jeune, Jes. Rel. xvii. 163).

The Huron believed in reincarnation. This is in evidence in a case in which a sorcerer claimed to have been a demon living under the ground who, wishing to become a man, had entered the womb of a woman who, knowing she had not consented to the normal way, caused herself to give birth prematurely (Le Mercier, in Le Jeune, Jes. Rel. xii. 105-107). This belief seems also to have been extended to animals, for a Huron who lost a favourite dog during a bear-hunt lamented that a small bear had not been brought him to get the dog's name and take its place (ib. xiv. 38). In some cases regarding the future life the Huron "make no mention either of punishment or reward. And as they do not make any distinction between the good and the bad, they consider the goods given and the goods received as the interment of both" (Brébais, in Le Jeune, Jes. Rel. xvi. 181).

The Milky Way was called by the Huron the way of souls, and the souls of dogs were also immortal, a group of stars near the Milky Way being known as the path of dogs (Sagard, Voyage, 223, Dict. 211). It was possible, under certain circumstances, for the souls of the dead to be brought to the world of the living, and Huron folklore had at least one specimen of the Orphans and Eurydice cycle (Brébais, in Le Jeune, Jes. Rel. x. 148-153).

LOUIS H. GRAY.

HUSITES.—The Husites were the followers of John Hus, who, after the death of their leader, sought by force of arms to secure toleration for themselves in Bohemia. Thereafter in the 15th, 16th, and 17th centuries, they were divided into two sections, the one, the Ulbrichtists or Caletists, forming a party within the Roman Catholic Church; the other, the Bohemian Brethren, becoming an independent religious community.

1. John Hus.—Jan Hus, the reformer of Bohemia, was born in the second half of the 14th century in a village called Hussite near the town of Prague. The year and day of his birth are unknown. As family names were not then in common use among the rural population of Bohemia, he styled himself, from the name of his native place, John of Hussite, subsequently (from 1366) abbreviating the name to John Hus. The poverty of his parents compelled him to earn his livelihood as a chorister and musician. After having, in 1385, having resolved to devote himself to a clerical career, he began his studies at Prague. In 1389 he graduated B.D.; in 1394, B.D. and in 1396 M.D. A. Chalmers, Gram., tr. J. Wilkie, in Quebec Archd. and Hist. Soc. (1831) 143-196. For Huron grammar, see B. G. Combas of the N. Amer. Indians (40 Rev. 1870), pp. 116-118, 341-345, 351, 406, 458, 481, 725, 753.

HUSBITES

secured three votes, and the other nations, combined, only one. This caused a large number of German teachers and students to withdraw from Prague and found a new University at Leipzig (1609). In this, and in other acts that so much from racial antipathy to the Germans as from resentment against their fierce opposition to the Wycliffite doctrines which he advocated and regarded as his right, the champion of Gregory XIII. (1411), led to a division among Hus's own followers. Hus assailed the bull in trenchant sermons and disputations, while the theological faculty of the University, including many of his former adherents, defended it. The breach became wider and wider, and led to popular riots in Prague, so that at length the King, who was still on Hus's side, found it necessary to induce him, for the sake of peace, to leave Prague (1411). Hus did not seek the danger; he had not ceased for his continued activity in Southern Bohemia, where he devoted himself partly to composing polemical tracts in the castle of a patron, and partly to preaching to the people of the district, and soon put him at the head of the popular movement.

In order to effect an adjustment between the contending parties, the Emperor Sigismund, as he then was, in this same year, summoned a council to meet at Constance on the 1st of November 1414. Hus was quite prepared to attend the Council, but only as one who should be permitted in free discussion to try to win the fathers to the side of the Wycliffite teaching, and not as an accused person requiring to vindicate his actions. After prolonged negotiations with Sigismund the latter promised to use his Imperial authority to obtain for Hus this free and secure position in the Council. It was as bearing this understanding that Hus and the entire Bohemian people regarded the Emperor's safe-conduct, which in its actual terms, however, was to be given to Hus on a promise that he certainly intended it as a mere safe-conduct; for, when by a base betrayal Hus was apprehended in Constance on the 28th November, the Emperor was so enraged that he threatened to leave the Council. Nevertheless, he at length allowed the Council to institute a prosecution for heresy against Hus, and was able to secure only a single mitigation in the latter's favour, viz. that—for contrary to Canon Law—'the accused heretic should be permitted to defend himself in open court. In all other respects the case took the usual course. As the prosecution did not undertake to confute the alleged errors which Hus had taken from Wyclif's writings, and as Hus therefore unconditionally refused to recant, he was condemned to death by burning. He died at the stake on the 6th of July 1415, steadfast under long-protracted agony, and in true greatness of soul praying to the last. Hus was a follower of Wyclif, and made no higher claim. His ideas of Church reform are all derived from Wyclif, whose writings he often reprinted without making any additions or alterations; and he still adhered to many doctrines and practices of the Church which the latter rejected, as, e.g., the Seven Sacraments, Transubstantiation, Masses for the Dead, Intercession of the Saints, Purgatory, the Merit of Works, and others. From Wyclif he received, above all, the principle that the Holy Scriptures is the standard of truth in matters of faith, and that the authority of the Church must be subordinate thereto. For Hus, Christ was the Head of the Church, and all Christendom must submit to the papal hierarchy, but the community of the elect. These principles he proclaimed to the people with glowing eloquence, and so prepared them to put forward the demands for the abolition of these ecclesiastical abuses long felt to be tyrannical.

LITERATURE.—The sources for the life of Hus are collected in the following works:

2. The Hussites.—The treacherous arrest of Hus, his condemnation as a heretic, and his execution were felt by the Bohemians as an indignity to their nation, and, when Sigismund began a savage persecution of Hus's followers in Bohemia, the people rose in revolt (1419). It is worthy of note that from the first the Hussites did not demand that the prisoners of war, who were in the hands of the Hussites fought and conquered was the chalice, though Hus himself had never demanded that the laity should partake of the cup in the Lord's Supper, but that at most he had merely when his friends in Prague made that demand during his imprisonment in Constance. In point of fact, as the earlier Waldenses frequently joined hands with the Hussites, inspiring them with their fresh vitality, the claims of a large section of Hus's followers went far beyond what he himself had asked for.

This is true especially of the most extreme part of the Taborites—so called from Tabor, the name of the town which they founded in the district of Southern Bohemia where Hus had preached to the people during his absence from Prague. The Taborites were the people's party among the Hussites—the most uncompromising Wycliffites, whose position was at first defined in part by certain escholatical beliefs. The leader was the brilliant general, Jan Trocmoz of Ziska.

The more moderate party were designated Calixtines or Utraquists, who did not demand that the laity should have the cup (sacramentum sub utraque specie). They were sometimes called "Pragueans," from the fact that they were drawn mainly from the academic and civil circles of Prague. Their leader and counsellor was Jan Rokycan, a Magister of Prague University, who was made a bishop by his city in 1420, though his appointment never received papal ratification. The Utraquists put forward their distinctive claims in the Four Articles of Prague, as follows: (1) Unrestricted preaching of God's word; (2) communio in both kinds; (3) the apostolic poverty and moral purity of the clergy; and (4) Church discipline. In spite of the numerous differences between the two sections, they always combined in making war upon their common enemy. Having repulsed several German crusading armies (1420-22), they took the city of Prague, razing it and carrying out punitive massacres. The Council of Basel entered into negotiations with them, and at length, in the Compacts of Basel (1433), granted them the four conditions just noted. But by taking
Hussites, this step the Council managed at the same time to bring about an irreconcilable antagonism between the two Hussite parties, as the Taborites absolutely refused to be satisfied with such trifling concessions. The two sections, and the united forces of the Calixtines and the Catholics gained a decisive victory over the Taborites at Libusin on 20th May 1434. It soon became apparent, however, that Rome was bent upon revoking the concessions it had made. It did not adhere to the Compactate; in fact, Pope Pius II formally cancelled them in 1462. Still, they remained actually in force, for the Bohemian Diet had made them the law of the land, and the change was resisted at every stage to maintain them. But in 1567 the Diet itself repealed them, as Ultra- 
quistes by that time in a state of utter dissolution.
From the time of Luther's entrance upon the scene they had in ever-increasing numbers allied themselves with the reforming movement directed by him. The Taborites as a party were never of any consequence after the defeat of 1434; a section of what still remained of them attached itself to the Bohemian Brethren.

I. The Bohemian and Moravian Brethren.—The Hussite wars, with their meagre results, left behind in Bohemia a general dissolution of ecclesiastical order and a spirit of pessimism. In all parts of the country there arose small communities, attaching themselves to individual priests, and the more bigoted circles of these communities often sought to effect reforms in strange ways, while their members, like the older Taborites, spoke of one another as brothers and sisters. But Rokyca
nava, the leader of the Ultraquistes, and the Archbishops of Prague, were satisfied with what had been won, and in his sermons vigorously denounced the moral and religious defects of the Roman Church, as well as of his own party, and made a deeper impression upon a little circle of religiously disposed persons whose leader and head was Brother Gregory. When, however, this circle called upon Rokycanova to translate his strictures into action, he declined to do so. Then, after appealing also to Peter of Chelten—a thoroughly 
genuinely parson of Wysl, and the leader of one of the small communities mentioned above—his practical support of their designs, but again in vain, they withdrew, about 1467, to the east of Bohemia, to the solitude of Kunwald, and there formed, not another monastic order, but a community like the Waldenses (q.v.) or the Friends of God (q.v.). Their practice was to send out 
Itinerant preachers in pairs, they had a communal organization and communal law, they divided their members into beginners, proficients, and the perfect, as in the Theologian Hermogenes (ed. Pfeiffer, tr. E. Winkworth, 2nd ed., London, 1854, ch. 14), in 1467 this community, which meanwhile had gained ascensions in several other districts of Bohemia and Moravia, dissociated itself completely from the Ultraquist Church by adopting the policy of selecting and ordaining its priests from its own ranks, subsequently procuring for them a second ordination as the hands of a Waldensian bishop named Stephen, resident in Austria. They assumed the name jednota bratrská (Czech, 'society of brethren'), afterwards Latinized as Unitas Fra
trum. This group of smaller numbers, however, called themselves Waldenses, or, more frequently, Pithards (Beg-
hards). As they had now broken off relations with the Church, they proceeded to withdraw from the world. Military service, the taking of oaths, the delivering of penal judgments, and, accordingly, all participation in the administration of State or Church, were forbidden to their members. They likewise loathed science, the sole function of which they reckoned to be the correction of error by science. But their supreme concern was practical Chris
tianity—purity of conduct, the permeation of social life with religious sentiment, the self-denying love to one's neighbour, the fulfilling of the law of Christ according to Gal 6,; hence, too, they sometimes called themselves 'Frates legis Christi.' In the succeeding decades their estrangement from worldly interests became gradually more rigorous—a development which was not affected by the events of the conciliar period, but resulted in the severance of the 'Little Sect' (also called Anomeites, after their leader, Anos of Wod
nian).

II. The Brethren had found their standard of doctrine in the writings of Brother Gregory (Seven Letters to Rokycanova, 1464-70, Tractate on the Holy Church, 1470, On Two Kinds of Work—that founded on the Sand and on the Rock, probably 1471, and others); but from about the year 1480 the spiritual leadership of the sect was assumed by Brother Lomax, B.A. of Prague University, who, with a reverent regard for traditional usage, finally settled its constitution, its order of worship, its social organization, and its doctrines. His numer
ous works include, besides theological tracts, the hymn-book of the Brethren, the first catechism for the various grades of the community, full official instructions for their priests, and a number of ritual, etc. It was this effective organisation that enabled the community to survive the numer
ous persecutions directed against them, and even to emerge therefrom with renewed strength. Their adversaries had been successful in having a decree adopted in the national statute-book, and this made a law of the state, that the Unitas Fratrum, with its congregations and as
semblies, should not be tolerated in Bohemia (1508). This law nominally remained in force for a century (till 1609), but the nobles had sufficient power to be able for the most part to protect the communities on their own estates.

Very soon after the rise of Luther, the Ultraquist Church in Bohemia entered into negotiations with him, and upon both sides there was a desire for closer union. This fact induced the Brethren also to send an ambassador—John Amalarius, who, after the death of Lucas (1522) that the relations between them and the German reformer became really intimate, and that their leading men such as Johann Horn and Johann Angweus, sought to meet him half-way by adopting his doctrines in their Confession. (Their 'Statement of Faith,' with a preface by Luther, appeared 1533.)

In consequence of the defeat suffered by the Bohemian nobles in their revolt against Ferdinand 1. in 1547, the latter became powerful enough to set in operation once more the old laws against the Brethren. The large majority of the Brethren were thus forced to withdraw from Bohemia, and sought refuge in Poland. They were, however, per
mitted to remain in Moravia, where, indeed, they had their chief settlements, as also the administra
tive centre of their Church. The need of a legally secure position pushed the German Brethren to have attained in 1555 by the 'Religious Peace' of Augsburg, led the Brethren—under the guidance of Biholaiav—and also the Ultraquistes, who is ever larger number, however, became Lutheranes, to engage in prolonged ecclesiastical negotiations with Maximilian II. In the course of these negotiations, in 1575, the evangelical State adopted the Confession of Bohemia, in the framing of which the representa
His teachings attracted attention in educated circles; Lord Advocate Forbes adopted his principles at once. Parkhurst followed him in emphasizing the consonantal Hebrew text, yet Lexicon attests. George Horne for the same reason opposed Kennicott's scheme of collating Hebrew MSS. He also believed that Hutchinson had excelled Newton in his understanding of the geography of the world, and he added William Jones of Nayland in a reply to Clayton's Essay on Spirit. Jones twice elaborated a theory of the Trinity, and to the end of the century developed his physical teachings. No later adherent made any mark.

2. The name 'Hutchinsonians' is sometimes applied to the followers of Anne Hutchinson (1600–1643), in her pleas for experimental religion and freedom of conscience. Reaching Boston in 1634, she found the civil enfragement limited to church members, with an oligarchy of ministers and elders in power; most of the settlers were Puritans, so intolerant that they shipped back a few who dared to use the Prayer-Book. She herself, though an admirer of John Cotton, was not at first admitted to membership in his church, which also silenced all women members; she therefore began teaching in meetings of her own. She was soon attended by men, the most prominent being young Henry Vane, son of a Privy Councillor. The Company forbade the organization of new churches without the consent of the magistrates and of the elders in existing churches; the dragoons replied by putting forward Mrs. Hutchinson's brother-in-law to be assistant to Cotton, and electing Vane governor (1638). She then attacked the oligarchy as being under a covenant of works, whereas she and Cotton and most of the Boston church were under a covenant of grace, enjoying the peculiar indwelling of the Spirit. This led to all the elders in the colony assembling and condemning 82 opinions which they attributed to her or derived from her teaching; these they afterwards published in England to justify themselves, labelling them Antinomian, Familist, and Libertine. Cotton retracted, and at the next elections (1637) Vane was defeated, and returned to wage a better fight in England for toleration. His voluminous and obscure religious works are indebted to Boehm as much as to Mrs. Hutchinson. Other sympathizers migrated to the Connecticut River, and discarded all religious tests for civil membership. She and other adherents were banished; they settled in what they re-named the Isle of Rhodes (now Rhode Island), where her follower William Coddington and her husband were the earliest rulers, and the colony was soon famed as the home of religious liberty.

HYKSOS.—'Hyksos' is the title given to a race of invaders, apparently of Semitic origin, who conquered Egypt during the time of confusion and weak rule which followed the close of the XVIth and ended with the rise of the XVIIIth dynasty. The chief authority for the facts of the Hyksos conquest and domination is a fragment of the history of Manetho quoted by Josephus (c. Antiq. i. 14). Its statements may be summarized as follows:

In the reign of a king named Thutmose the gods were angry with Egypt, and there came up from the East a race of ignoble men who conquered the country without a battle. They oppressed the native population with great cruelty, burned the cities, and opened the temples. Thereafter they made one falata their king, and he established a great fortified place called Avaris (El-Arwa) on an arm of the Nile near Bubastis. Here he kept a garrison of 800,000 men. The Hyksos dominan-
